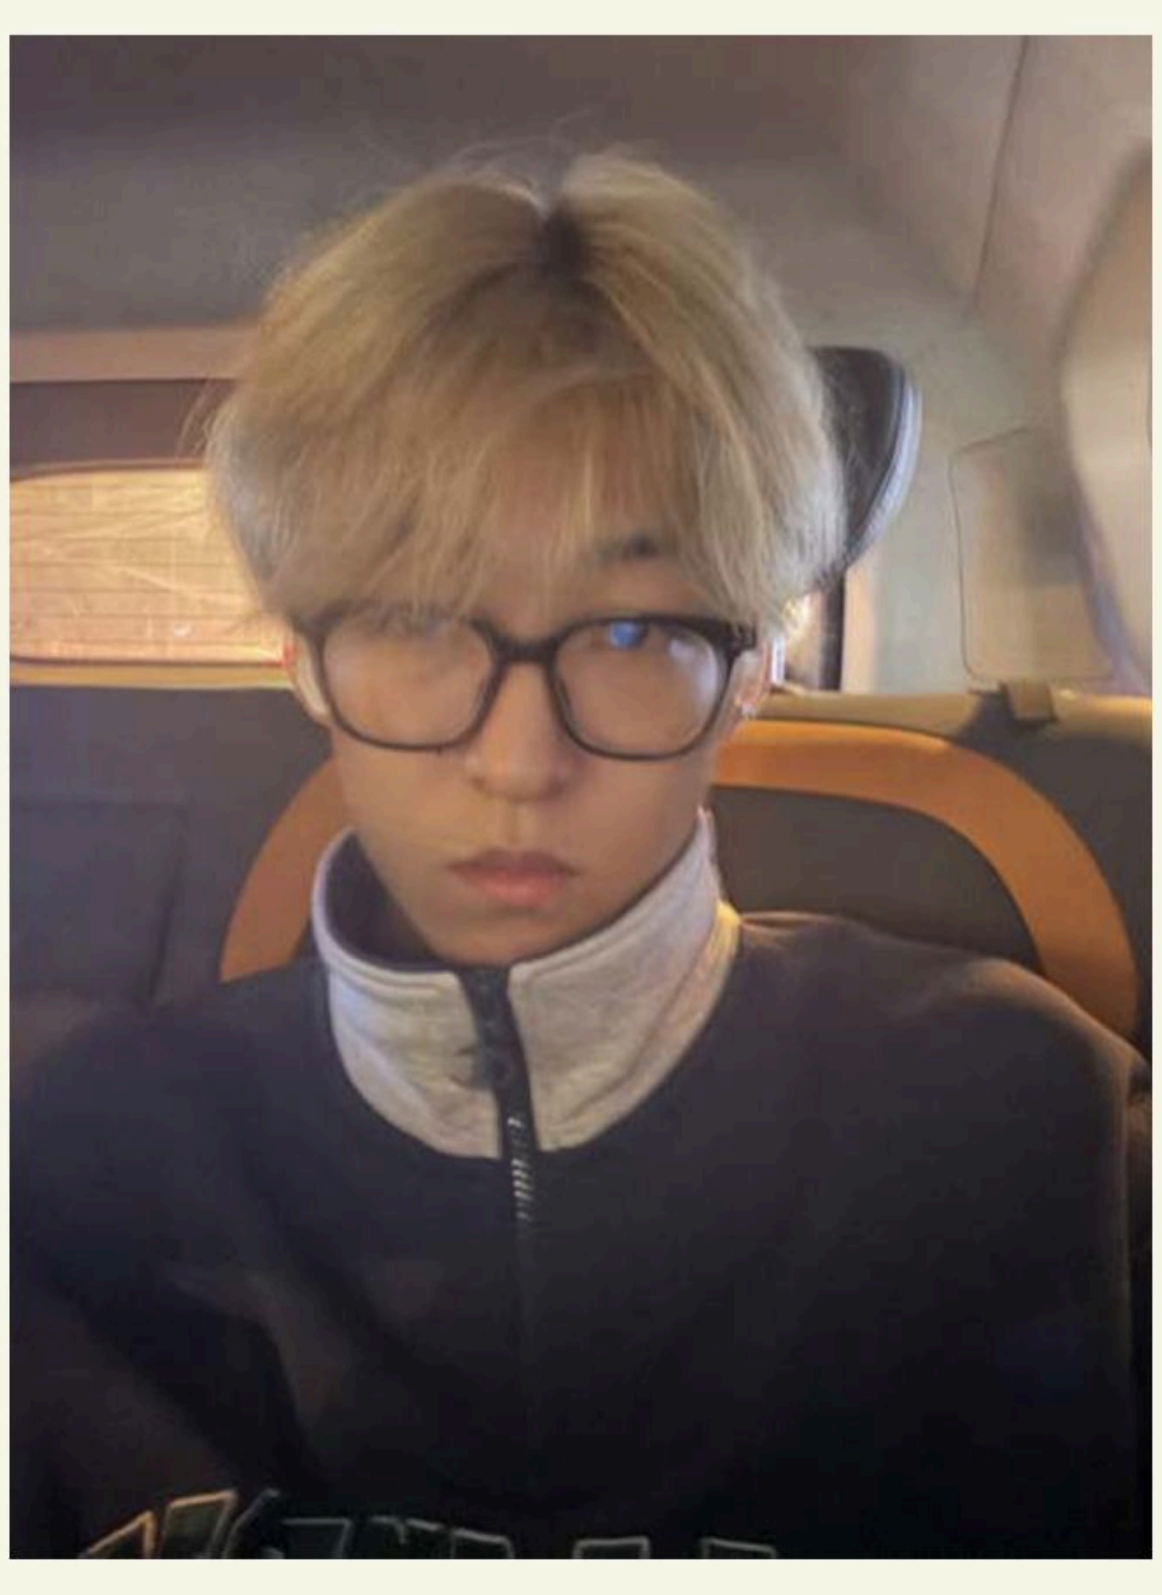
PORTFOLIO

LiuJiarui



Hi, my name is Jiarui, and I am 18 years old. I come from Sichuan Province, China. Besides my regular studies and daily life, playing video games takes up most of my time, which has also led me to develop a strong interest in many related fields, such as game design, character modeling, and environment modeling. It was precisely this passion that motivated me to pursue studies in game design. Throughout my learning journey, I hope to continuously refine and improve my skills in 3D modeling.

INTRODUCTION

Since childhood, I have been passionate about single-player games. After years of playing and exploring countless titles, I developed a desire to contribute to the single-player gaming community. However, I noticed that in my country, there isn't a comprehensive and insightful publication that introduces and discusses games in depth. This inspired me to create a magazine dedicated to single-player games—one that draws from my experience, knowledge, and long-term engagement with the medium, and offers valuable content to others who share the same passion.

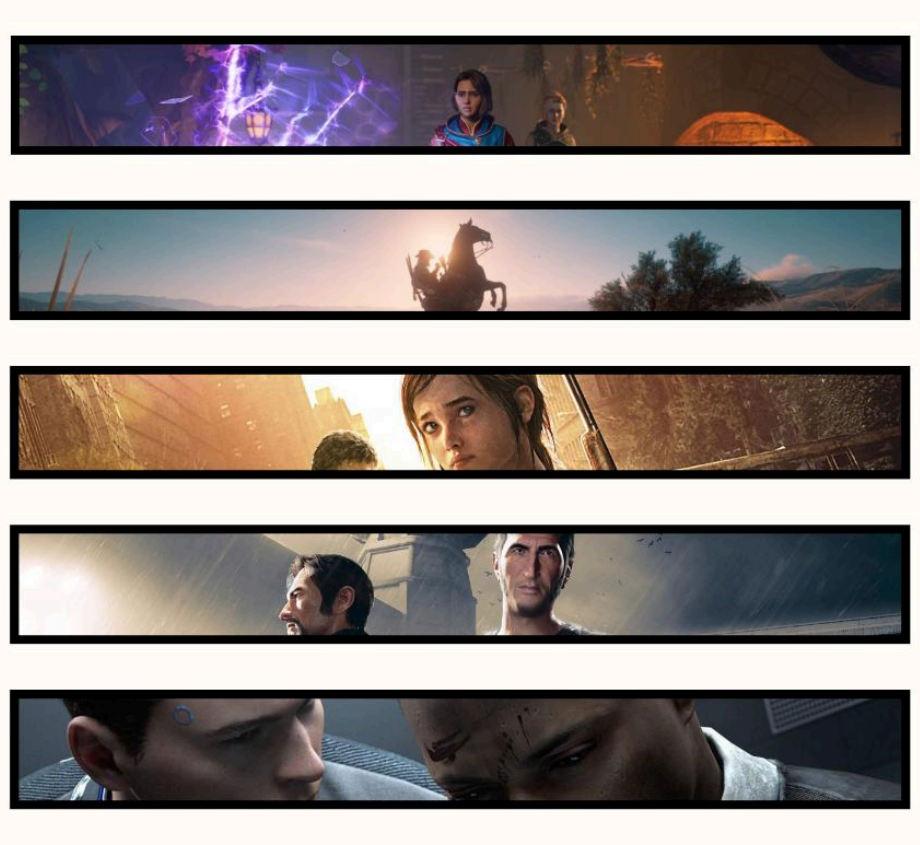
INSPIRATION

This project is inspired by the intersection between my long-term gaming experience and my background in visual communication. Growing up playing single-player and FPS games, I gradually came to see games not just as entertainment, but as carefully constructed worlds shaped by visual systems, interface design, spatial structure, and narrative rhythm.

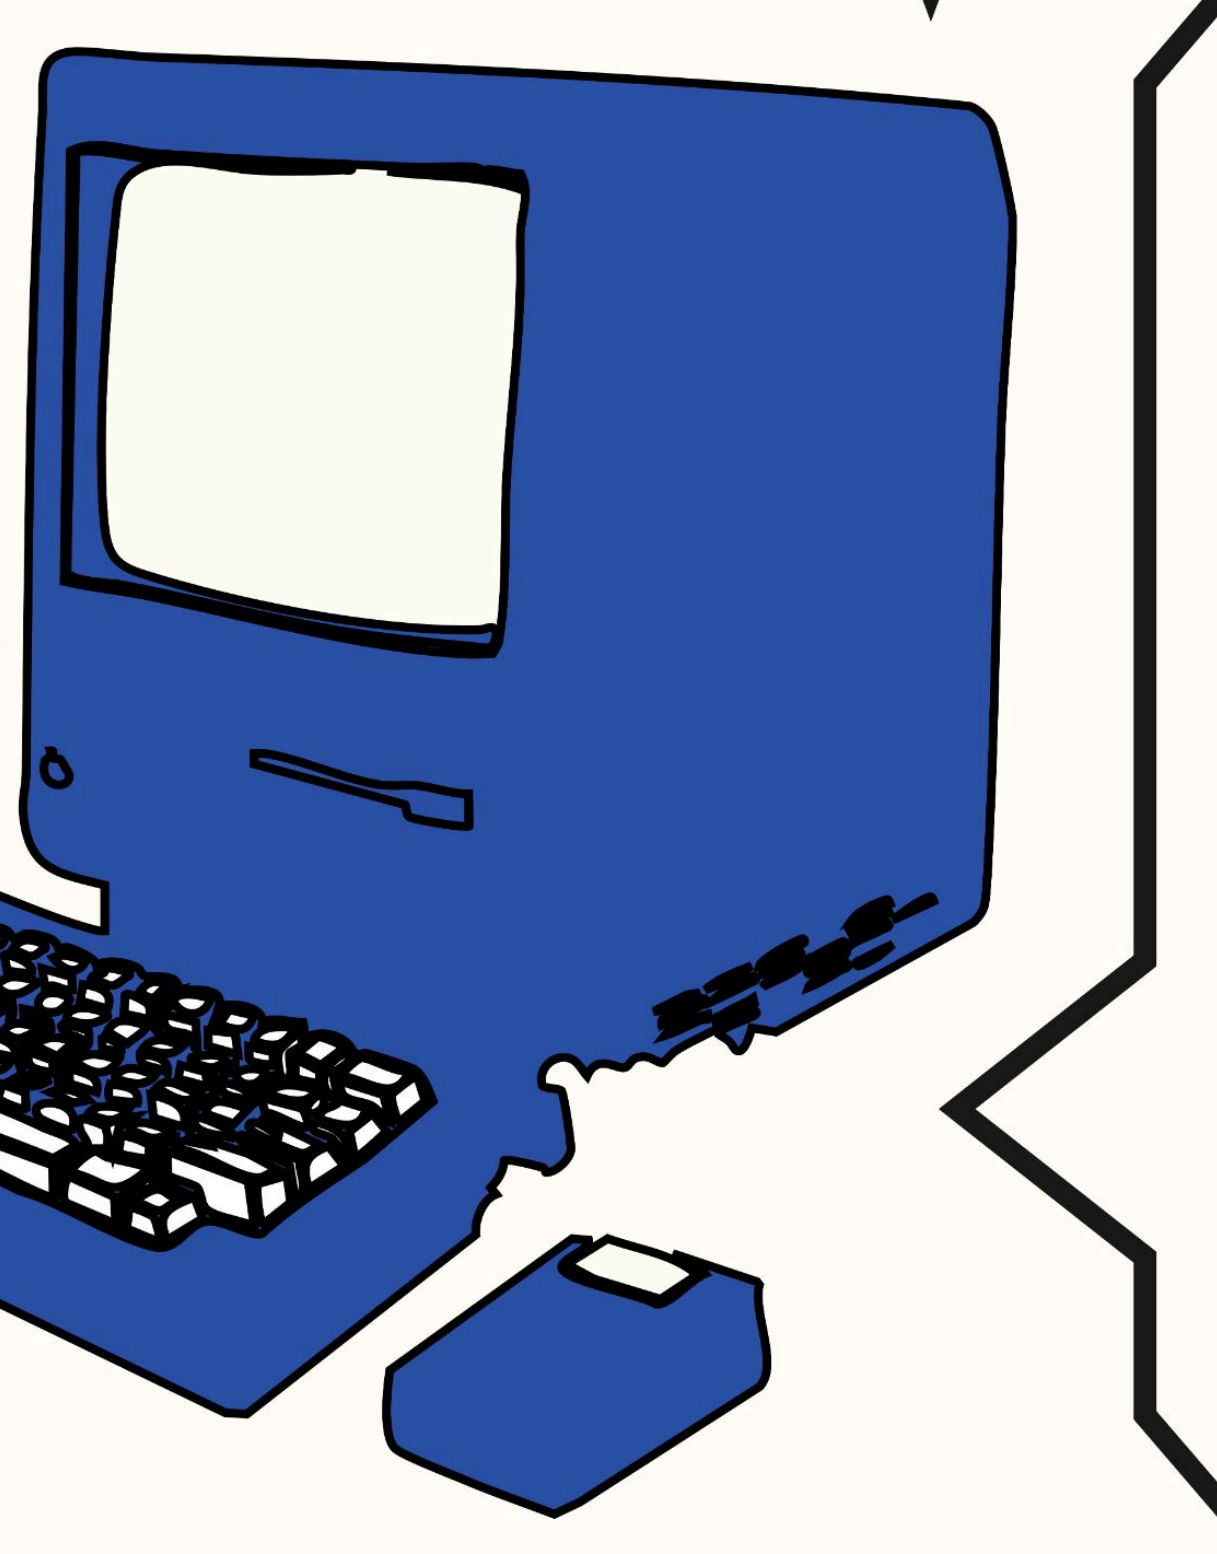
Through research, I noticed that most game media focuses on reviews or gameplay mechanics, while the visual and graphic design aspects—such as UI, HUD, posters, and visual identity—are rarely discussed in depth. This gap led me to question whether games could be examined through the lens of graphic design and visual storytelling.

As a response, I chose the magazine format as a way to translate in-game experiences into a readable and reflective visual medium. By using editorial layout, image sequencing, and design analysis, this project explores games as a form of visual culture and serves as both a personal reflection and a design-led investigation into how games communicate meaning.

RESEARCH



SPLIT FICTION
RED DEAD REDEMPTION
THE LAST OF US
A WAY OUT
BECOME HUMAN



SPLIT FICTION
→ DUAL NARRATIVE STRUCTURE / THE JUXTAPOSITION OF REALITY AND FICTION, WHERE NARRATIVE SHIFTS AND STRUCTURAL TRANSITIONS BECOME PART OF THE EXPERIENCE.

RED DEAD REDEMPTION
→ AN OPEN-WORLD REINTERPRETATION OF THE AMERICAN WESTERN MYTH, EMPHASIZING THE SENSE OF TIME, DECAY, AND ENVIRONMENTAL STORYTELLING.

THE LAST OF US
→ AN EMOTIONALLY DRIVEN LINEAR NARRATIVE, WHERE CHARACTER RELATIONSHIPS AND DETAILED ENVIRONMENTS WORK TOGETHER TO BUILD IMMERSION.

A WAY OUT
→ A FORCED CO-OP NARRATIVE STRUCTURE THAT TURNS INTERPERSONAL RELATIONSHIPS INTO A CORE GAMEPLAY AND STORYTELLING MECHANISM.

DETROIT: BECOME HUMAN
→ A BRANCHING NARRATIVE SYSTEM IN WHICH INTERFACES, FLOWCHARTS, AND PLAYER CHOICES ACTIVELY PARTICIPATE IN STORYTELLING.

CONCEPT & SUMMARY

This book is not simply an introduction to games, but an experiment in translating gameplay and narrative experiences into the language of graphic design. By examining five narrative-driven games—ranging from dual narrative structures and shifting realities, to open-world explorations of time and decay, emotionally charged linear storytelling, relationship-based co-operative mechanics, and branching choice systems—the project investigates how games construct meaning through structure, rhythm, and visual systems.

Through editorial design, I wanted readers to experience a rhythm similar to gameplay itself: the alternation between tension and calm, the visual contrast between order and chaos, and moments of breathing space between dense information and emptiness. In this context, design goes beyond visual decoration; it becomes a narrative device that allows emotion, pacing, and personality to emerge through layout. By doing so, the static pages are transformed into a dynamic reading experience that reflects the energy and character of the games themselves.
