Emotion Cuisine

OVERVIEW

Game Introduction

Emotion Cuisine is a unique single-player simulation and management game where you play as a chef running a mobile food stall on the distant alien planet of Zelos. Civilization here isn't driven by currency—but by emotional energy. The strange creatures of this world eat to regulate their feelings, and it's your job to cook dishes that precisely satisfy their complex emotional cravings. Become the ultimate psycho-culinary artist in this emotional galaxy.

Core Gameplay: Emotional Alchemy

You must act like a meticulous chemist, combining 8 vastly different primal ingredients (4 plant-based, 4 meat-based) to fine-tune the emotional profile of each dish. Each ingredient significantly boosts one emotion while subtly influencing others. Deeper strategy lies in understanding synergies and conflicts between ingredients —some combinations create powerful "emotional harmonies," while forbidden mixes trigger disastrous "dark cuisine," causing customers to react in ways ranging from hilarious to horrifying.

The game uses a bright, quirky cartoon aesthetic to build a world that's both familiar and utterly alien—from bubbling purple sauces to smiling space vegetables, every visual leans into the game's unique tone.

Inspiration:

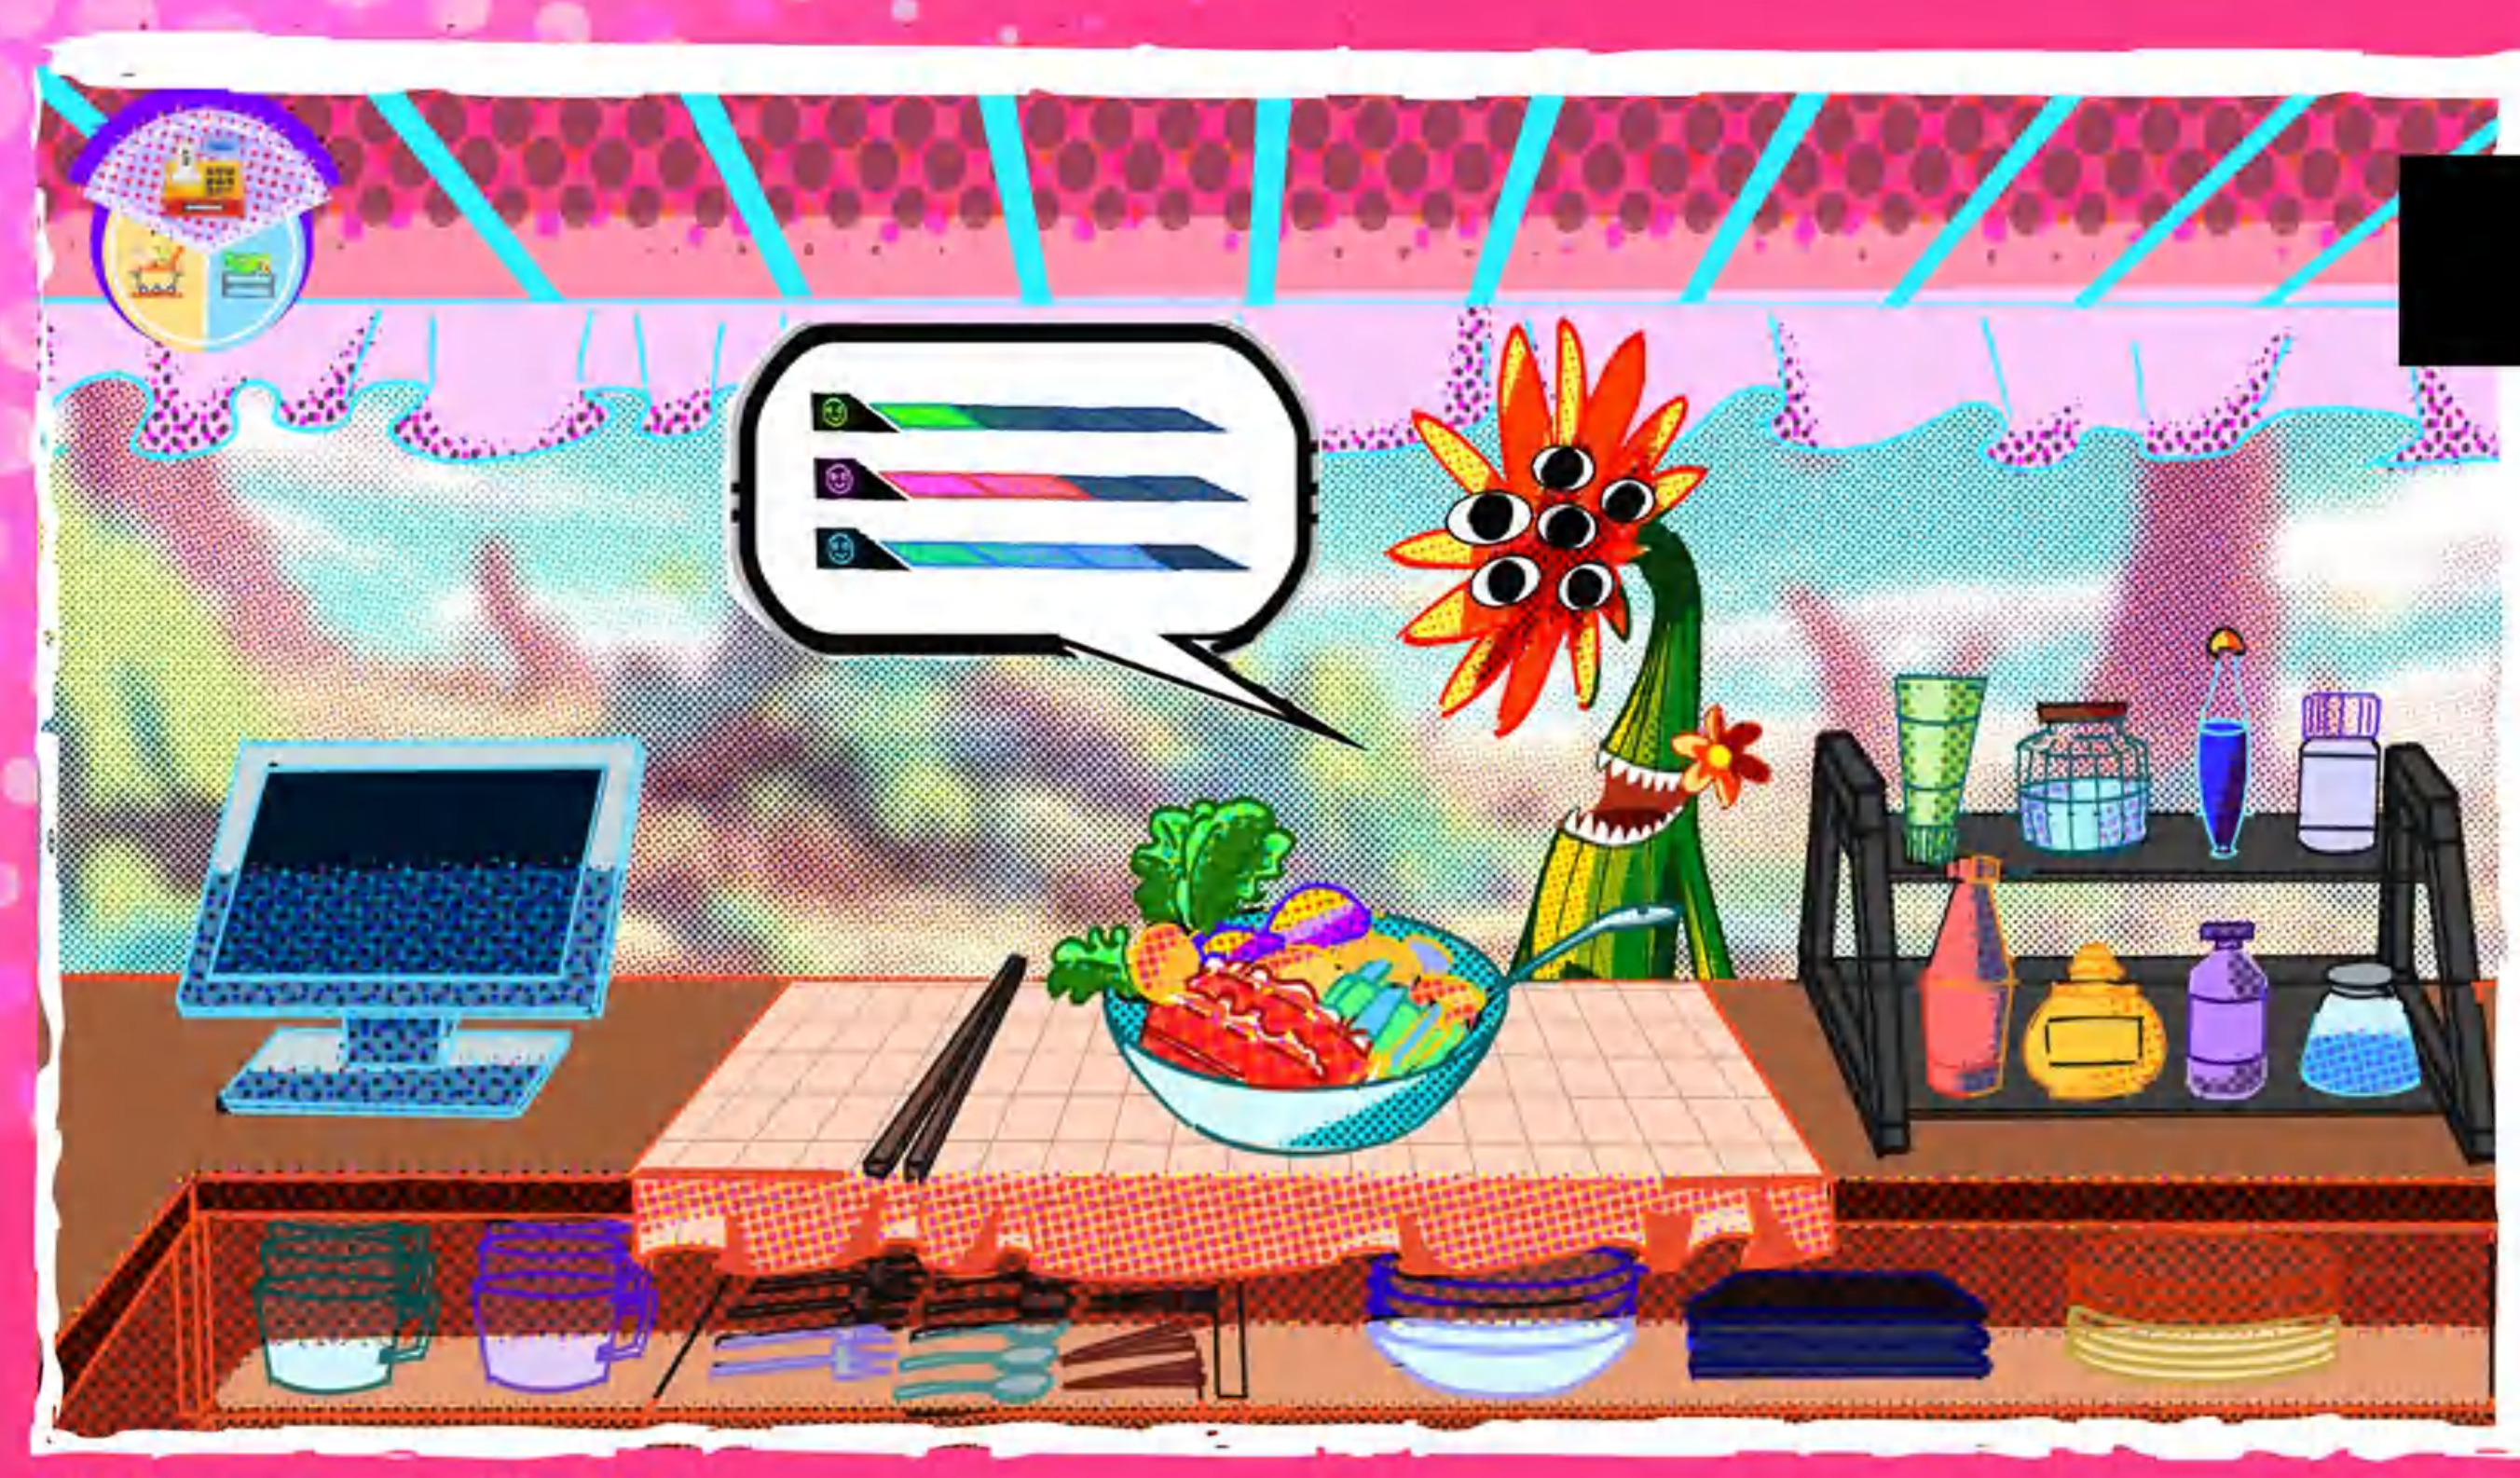
Overcooked

We captured the chaotic fun of completing orders under pressure, but replaced physical chaos with unpredictable emotional chemistry. Players balance neurochemicals instead of ingredients, risking dramatic "kitchen explosions" like customer mutations.

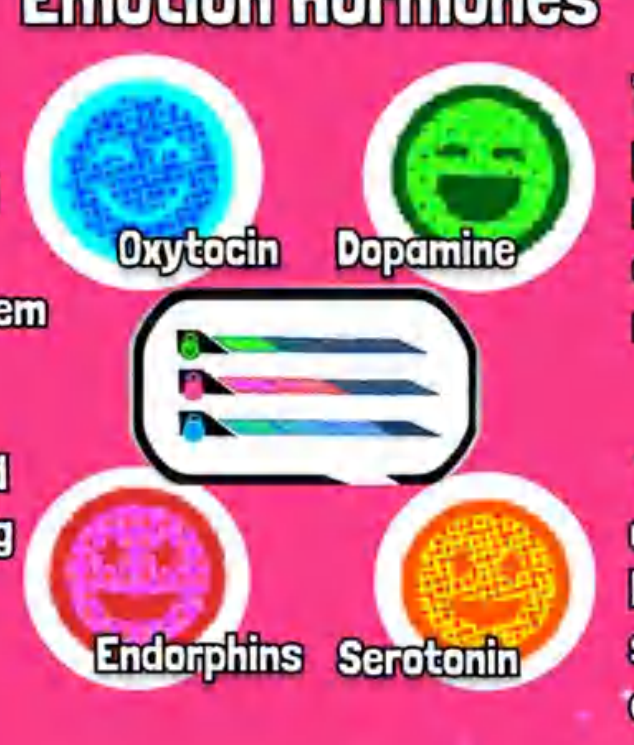
Rick and Morkty

Our alien designs embrace the same absurd humor and bizarre biology. Each customer feels uniquely strange yet strangely logical, fitting the game's quirky tone.

RECEPTION



Emotion Hormones



Oxytocin
Dopamine
Endorphins
Serotonin

The hormone of social bonding, intimacy, and trust. Customers in need crave connection, but overindulgence makes them overly dependent.

The currency of instant pleasure and reward. Customers lacking it appear listless; too much makes them restless.

The natural painkiller and stress reliever. They bring deep calm, but overdose leads to emotional numbness.

The foundation of long-term contentment and happiness. It stabilizes moods—a shortage brings melancholy, an excess induces drowsiness.

The role of seasoning

Spices provide temporary or permanent enhancements to emotional effects, cooking speed, or penalty resistance. They introduce a strategic layer to cooking, allowing chefs to customize their approach to difficult orders. These valuable additives can be earned by completing challenges or purchased from mysterious traveling merchants.

4s

The emotional value of the ingredients. After 12 seconds, for each additional black square, the emotional value of the food will decrease by one point.

There are a total of four cooking methods. Players can choose the cooking method according to the customer's emotional needs.

Cooking time & temperature

Fill one square every two seconds. After 12 seconds, fill one square every four seconds.

The color of the grid represents the degree of cooking of the food. 12 seconds ago, it indicated the normal edible cooking temperature of the food. 12 seconds later, it indicated that the food was burnt.

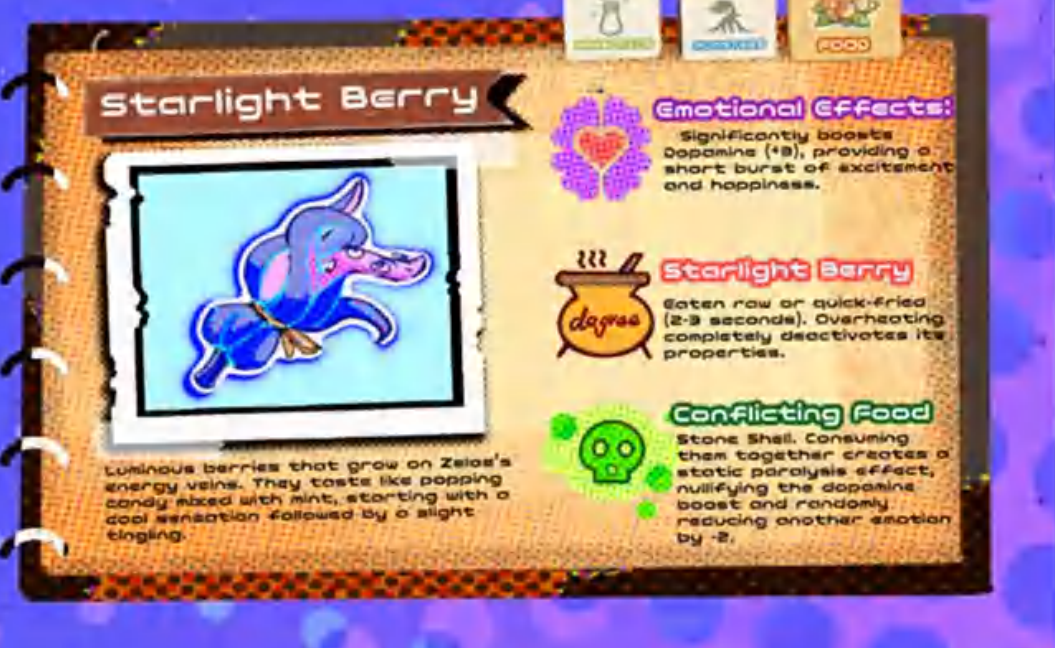
Detailed introduction



Starlight Berry

Luminous berries that grow on Zelos's energy veins. They taste like popping candy mixed with mint, starting with a cool sensation followed by a slight tingling.

Emotional Effects:
Significantly boosts Dopamine (+3), providing a short burst of excitement and happiness.

Starlight Berry
Eaten raw or quick-fried (2-3 seconds). Overheating completely deactivates its properties.

Conflicting Food
Stone Shell. Consuming them together creates a static paralysis effect, nullifying the dopamine boost and randomly reducing another emotion by -2.

Epic Customer

The BOSS is the ultimate challenge the player faces. Their core characteristic is the unpredictability and transformative nature of their reactions. They do not passively reflect emotions; instead, they actively absorb emotional energy and convert it into drastic, physical alterations of their own form. Their purpose is to break the routine and provide dramatic climactic moments, elevating the outcome of cooking from "tasty/unpalatable" to "triggering evolution or catastrophe."

Ftancy Customer Kitchen

NPCs are the basic entities the player serves. Their core characteristic is the predictability and immediacy of their reactions. They function like a set of precise instruments, providing clear, direct feedback on the success or failure of a dish through standardized changes in facial expression, color, and sound. Their purpose is to establish the game's core loop and provide positive reinforcement, allowing the player to quickly understand and master the fundamental mechanics.
