Bio-Mech
Transit Codex

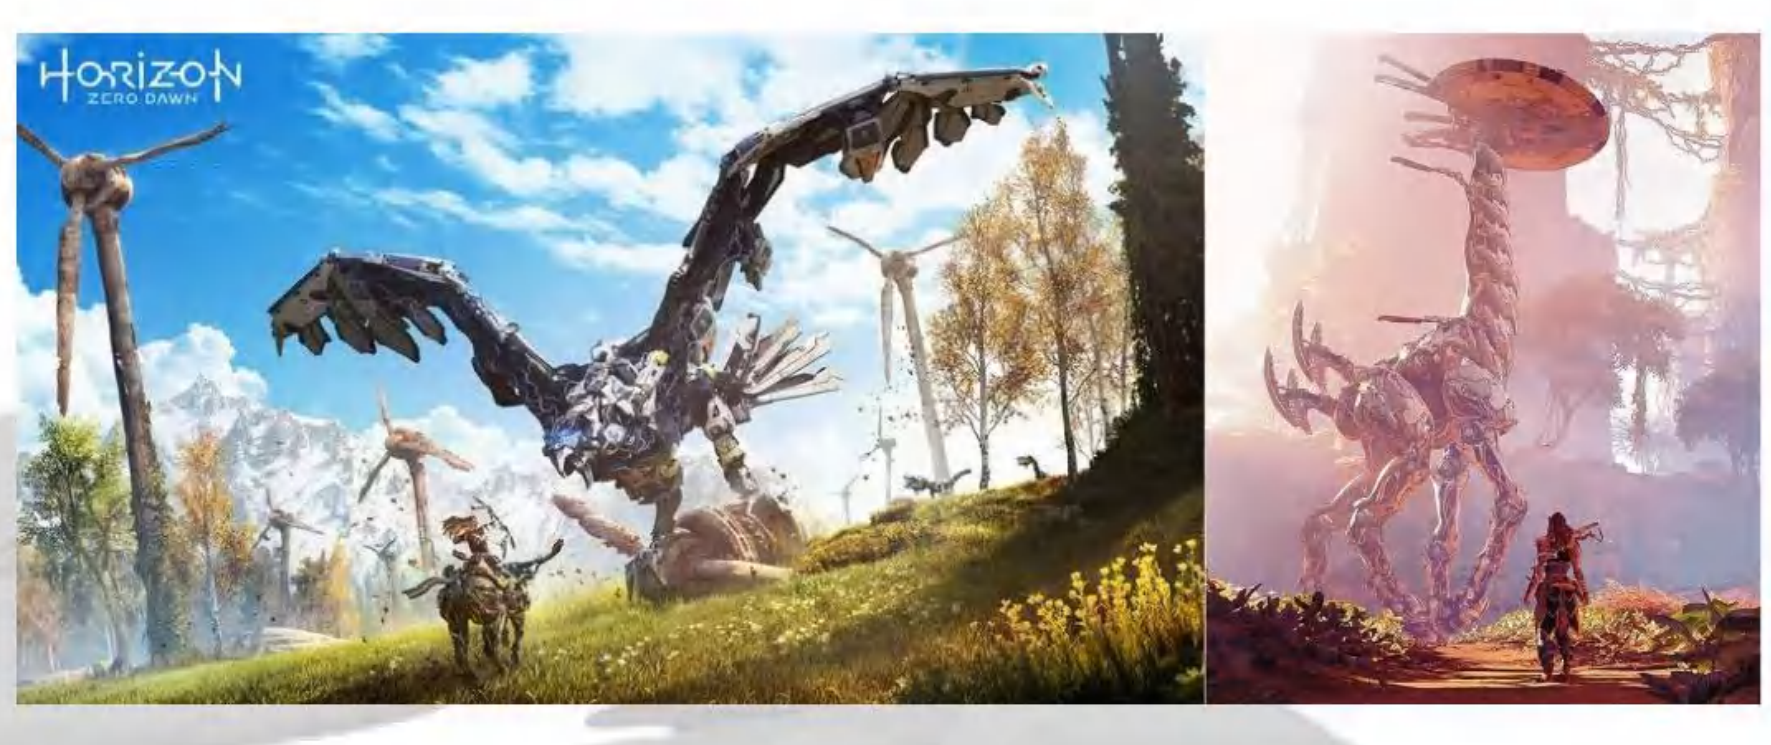
Focusing on sci-fi themes and bionic mecha creation, the series of works are fully realized via 3D pipeline with Maya and Substance Painter, showcasing exquisite details, rich textures and creative ingenuity.

BIONIC MECHA

INTRODUCE

Source of Inspiration

The core inspiration comes from the "wasteland aesthetic of mechanical creatures fused with nature" in Horizon: Zero Dawn, drawing on its design logic of combining animal physiology with industrial machinery, making the vehicles have both biological morphological beauty and mechanical functionality. It also integrates the Eastern mythological imagery of "Kunpeng carrying things", colliding with Western sci-fi style to form a unique East-West fusion wasteland mechanical aesthetic.



The reference animal prototype

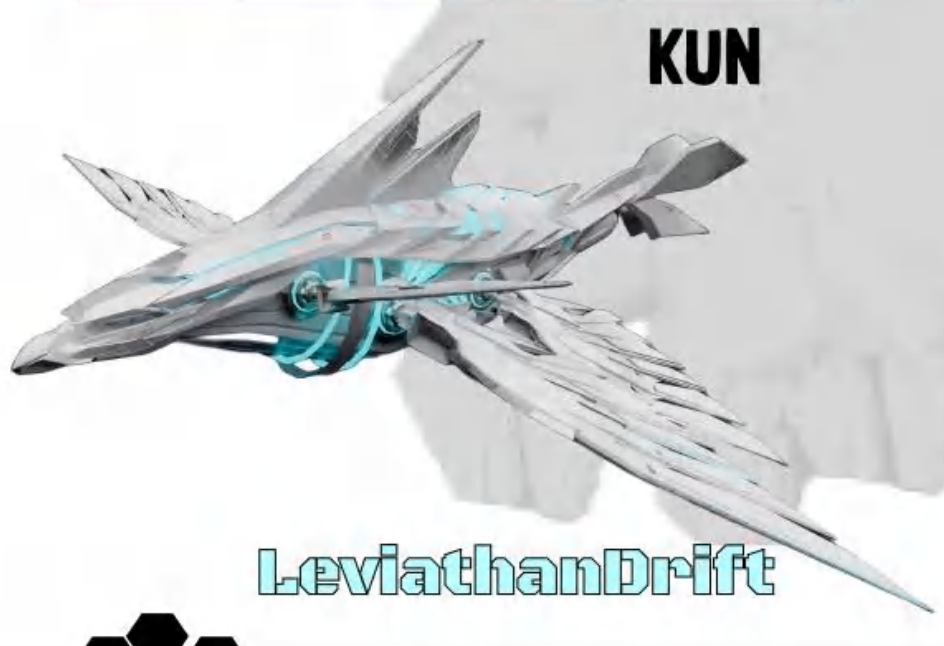
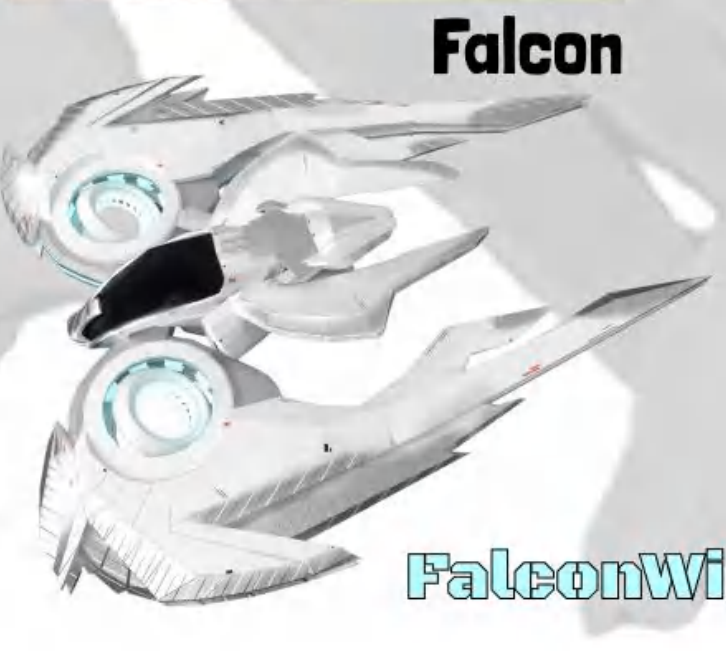
Falcon

pangolin

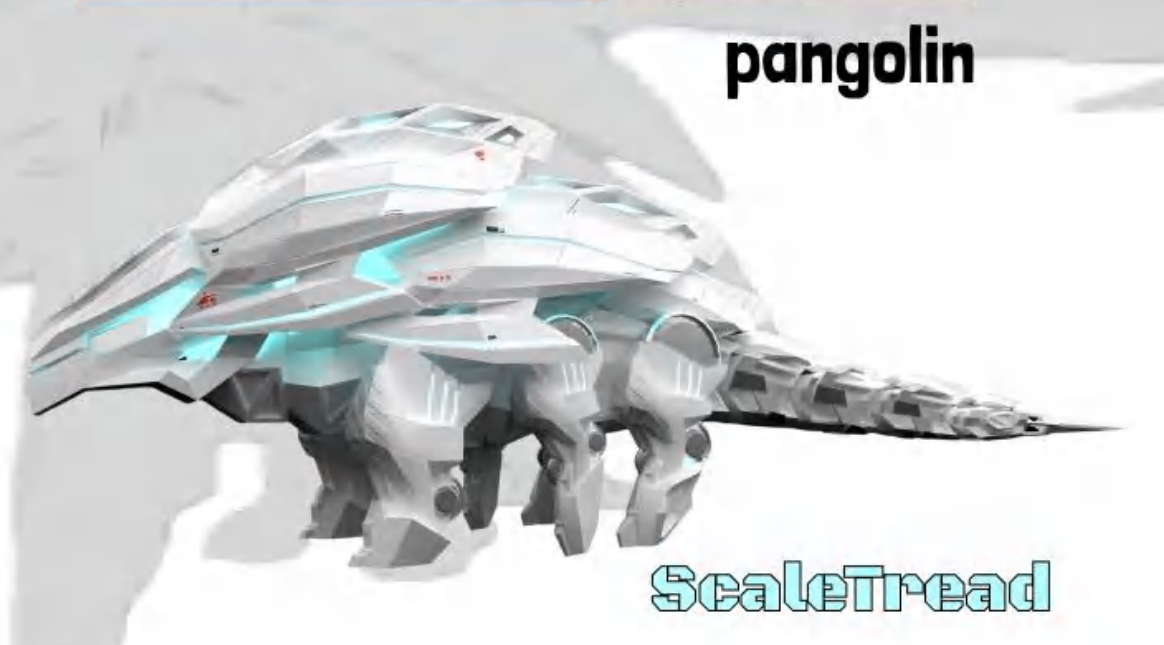
Orangutans and lions



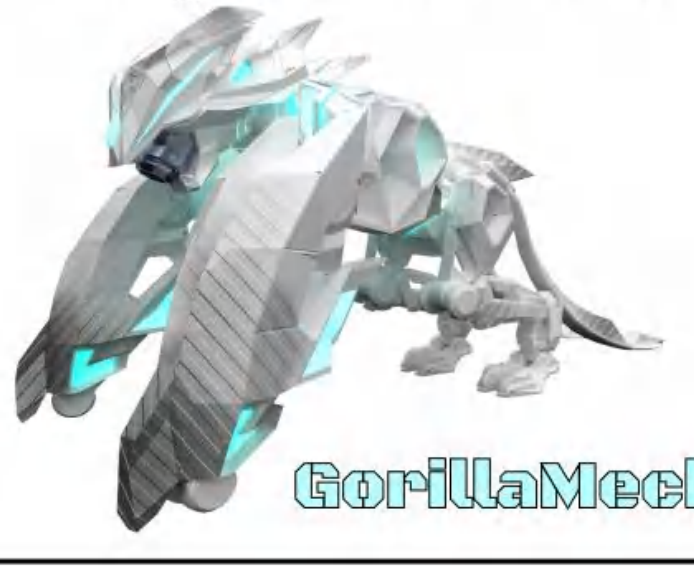
LeviathanDrift



FalconWing



ScaleTread

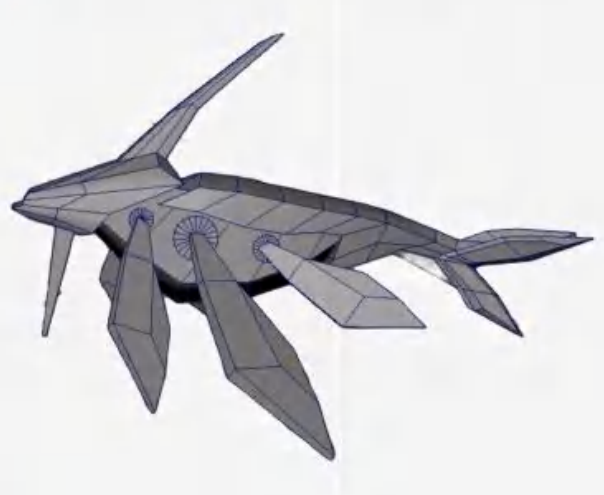


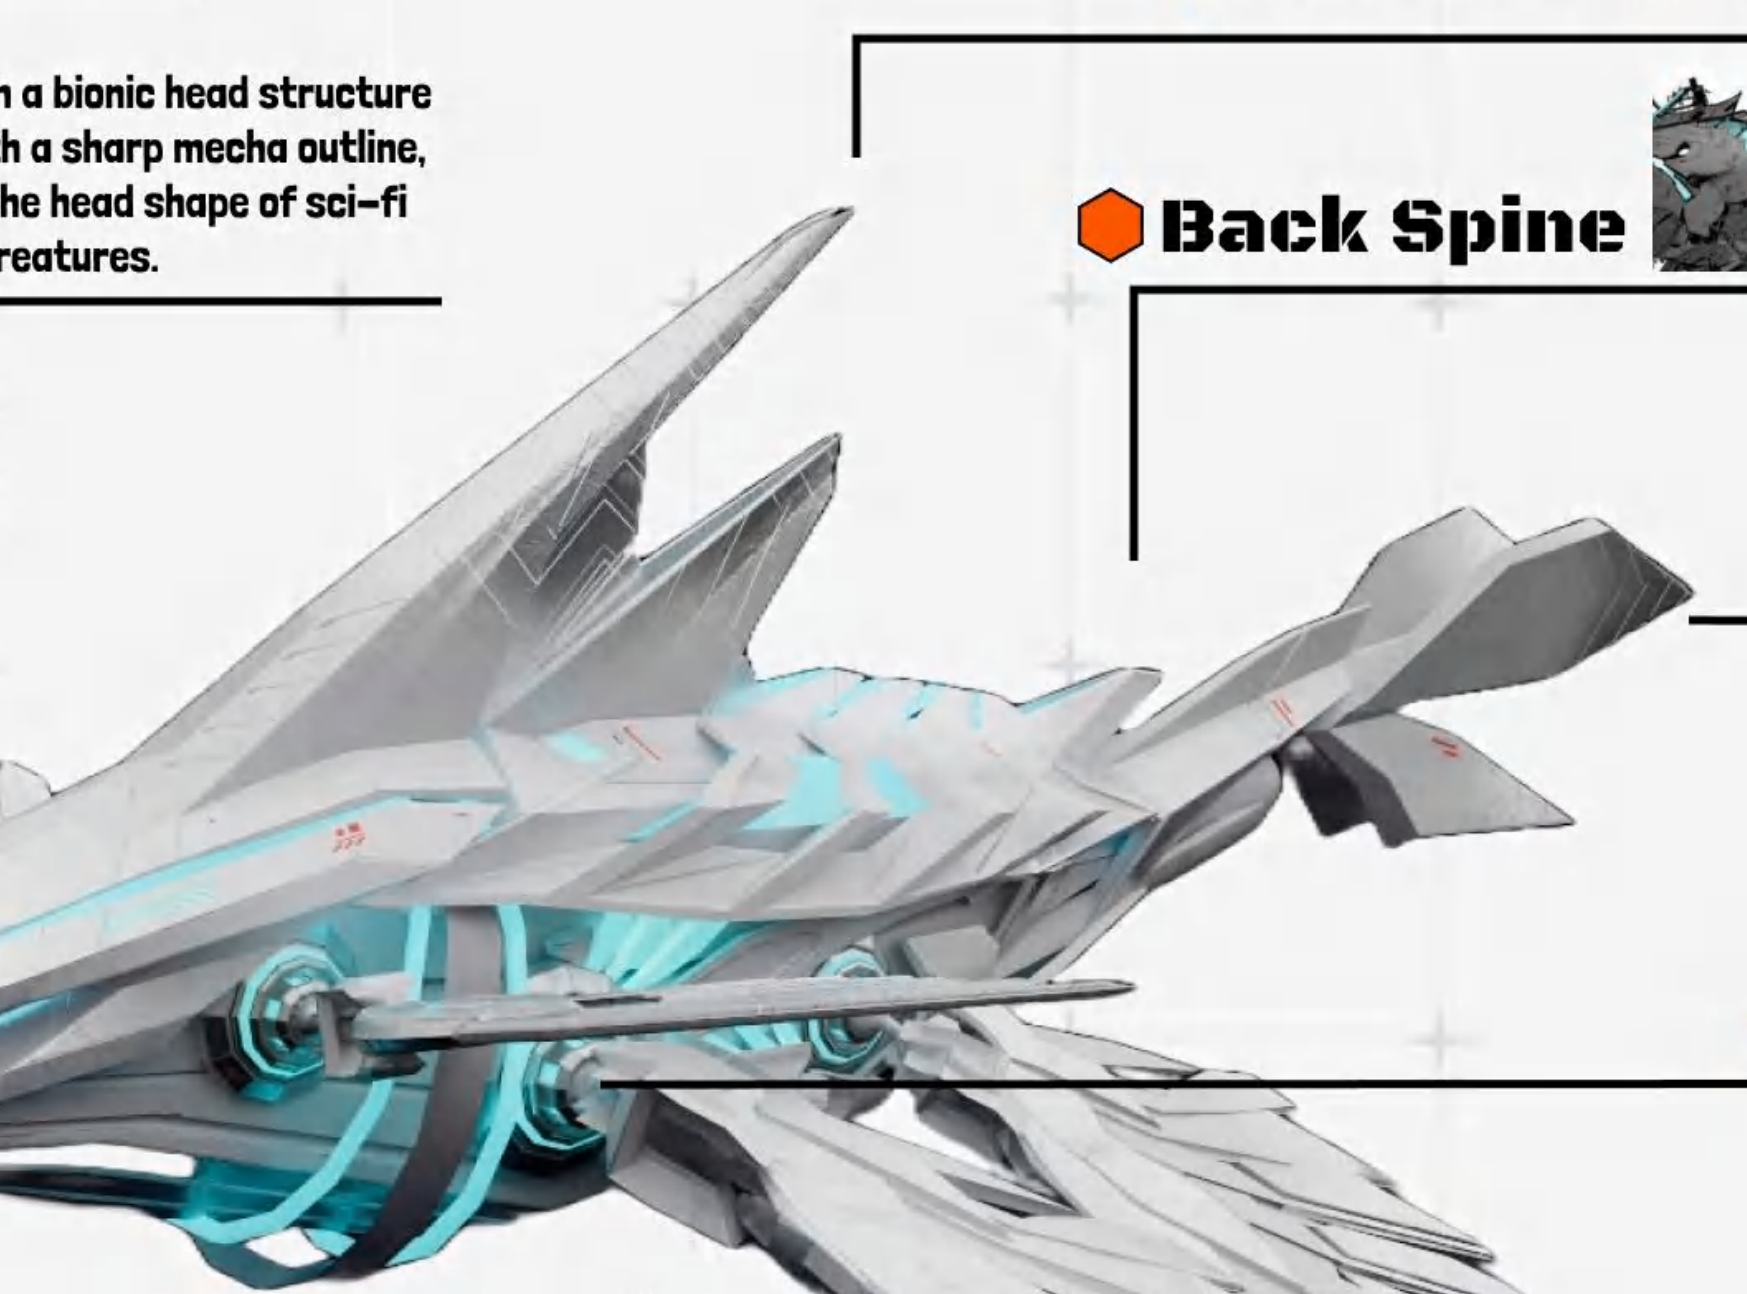
GorillaMech

LeviathanDrift

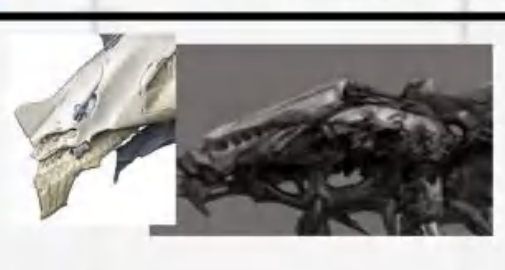
Draft drawing

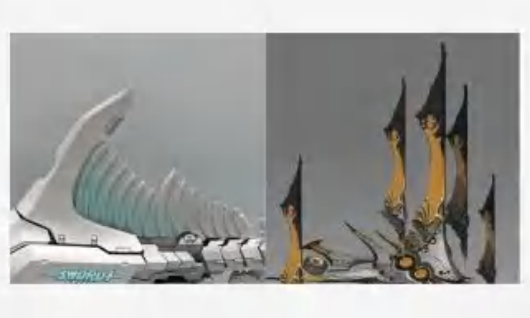
Initial model





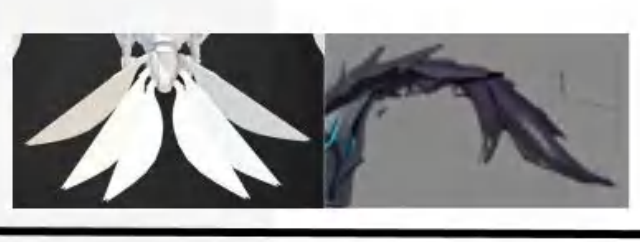
Head Designed with a bionic head structure combined with a sharp mecha outline, referencing the head shape of sci-fi mechanical creatures.





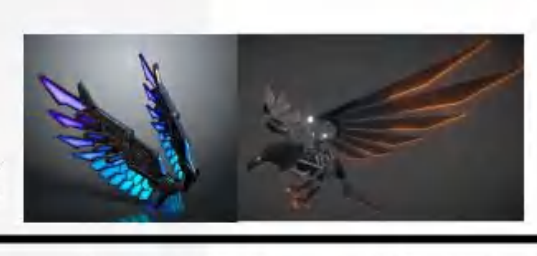
Fish fin Designed with a streamlined mecha style and fin-like mechanical structures, drawing on the sci-fi form of fish fins.

Back Spine Created as a tech-infused bionic spine mecha structure, referencing the back spine shape of mechanical spiny creatures.



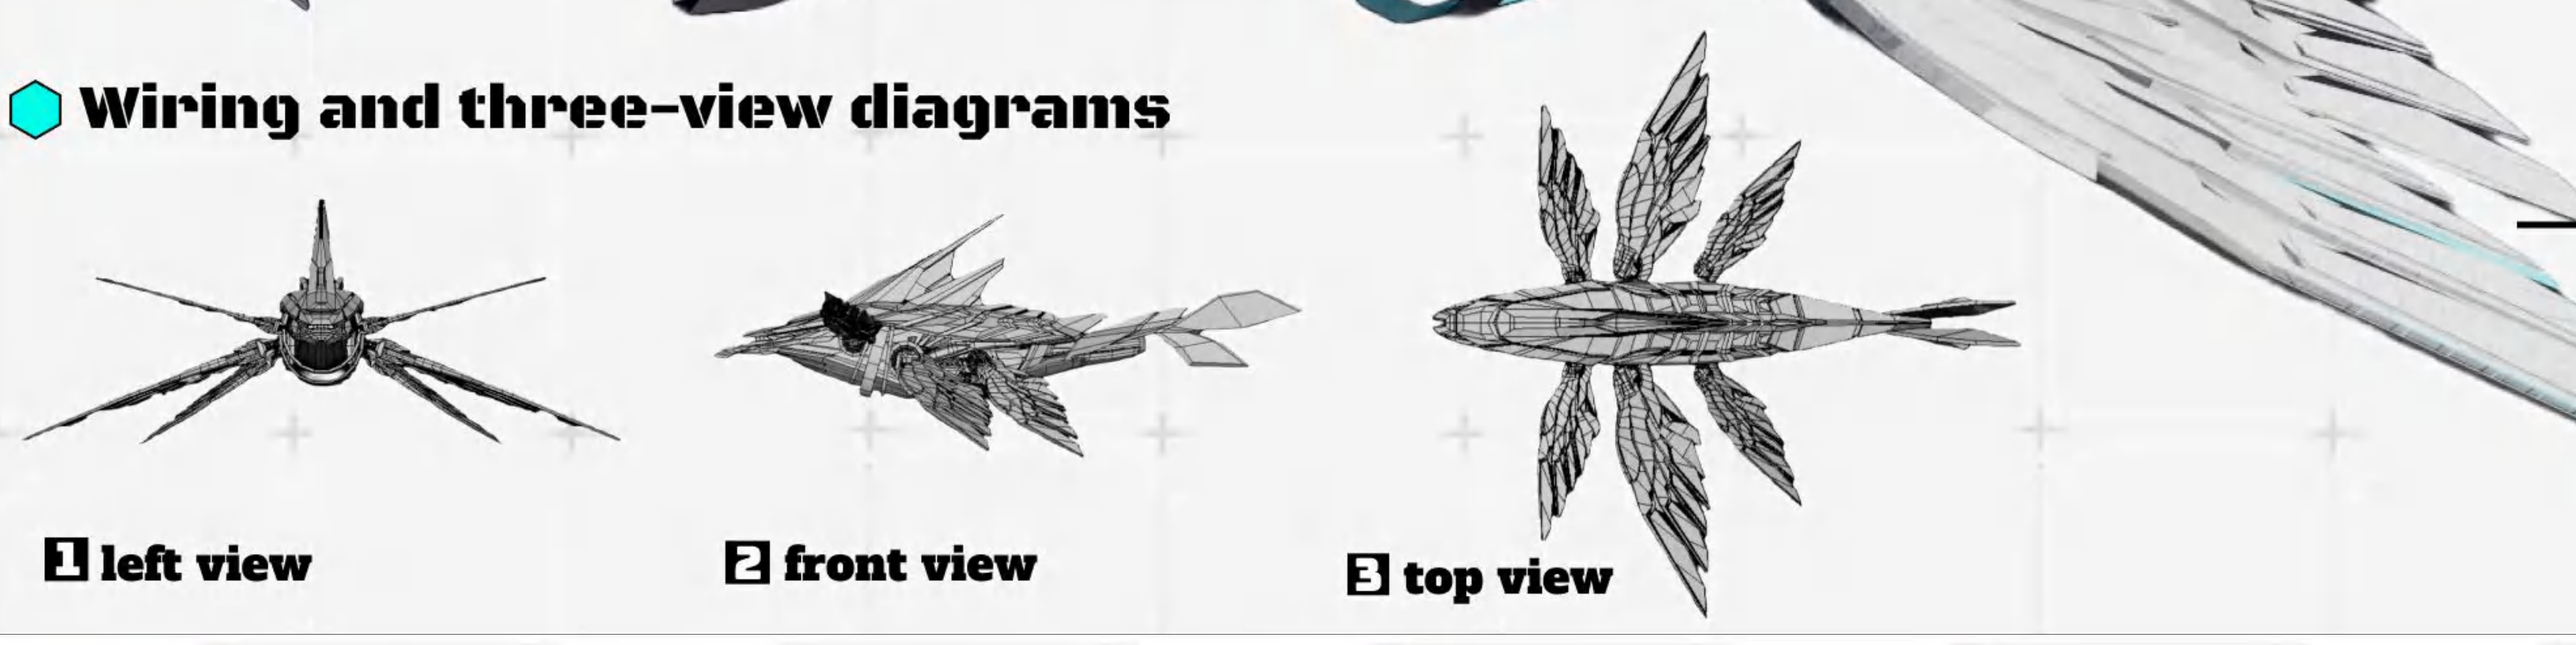
fish tail Designed into a forked fish tail with a mecha texture, taking inspiration from the sci-fi form of fish tails.

Abdomen Designed as mecha abdominal armor combined with a bionic body structure, referencing the abdominal structure of sci-fi mechanical creatures.



Wings Designed as mechanical wings with a bionic membrane structure, drawing on the sci-fi form of creature wings and integrating streamlined mecha lines.

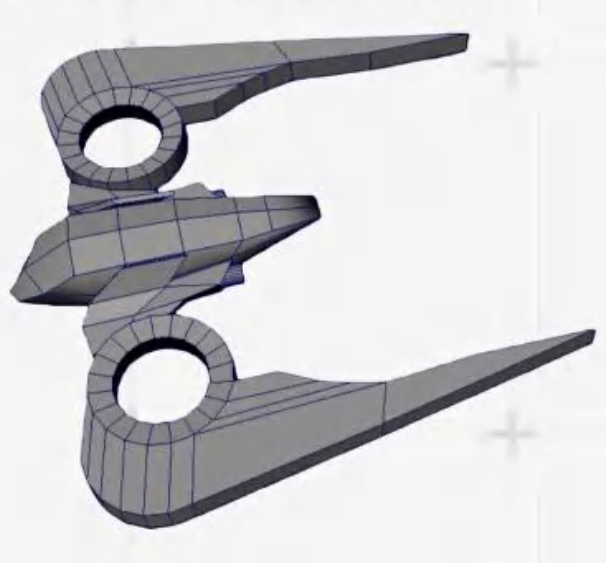
Wiring and three-view diagrams

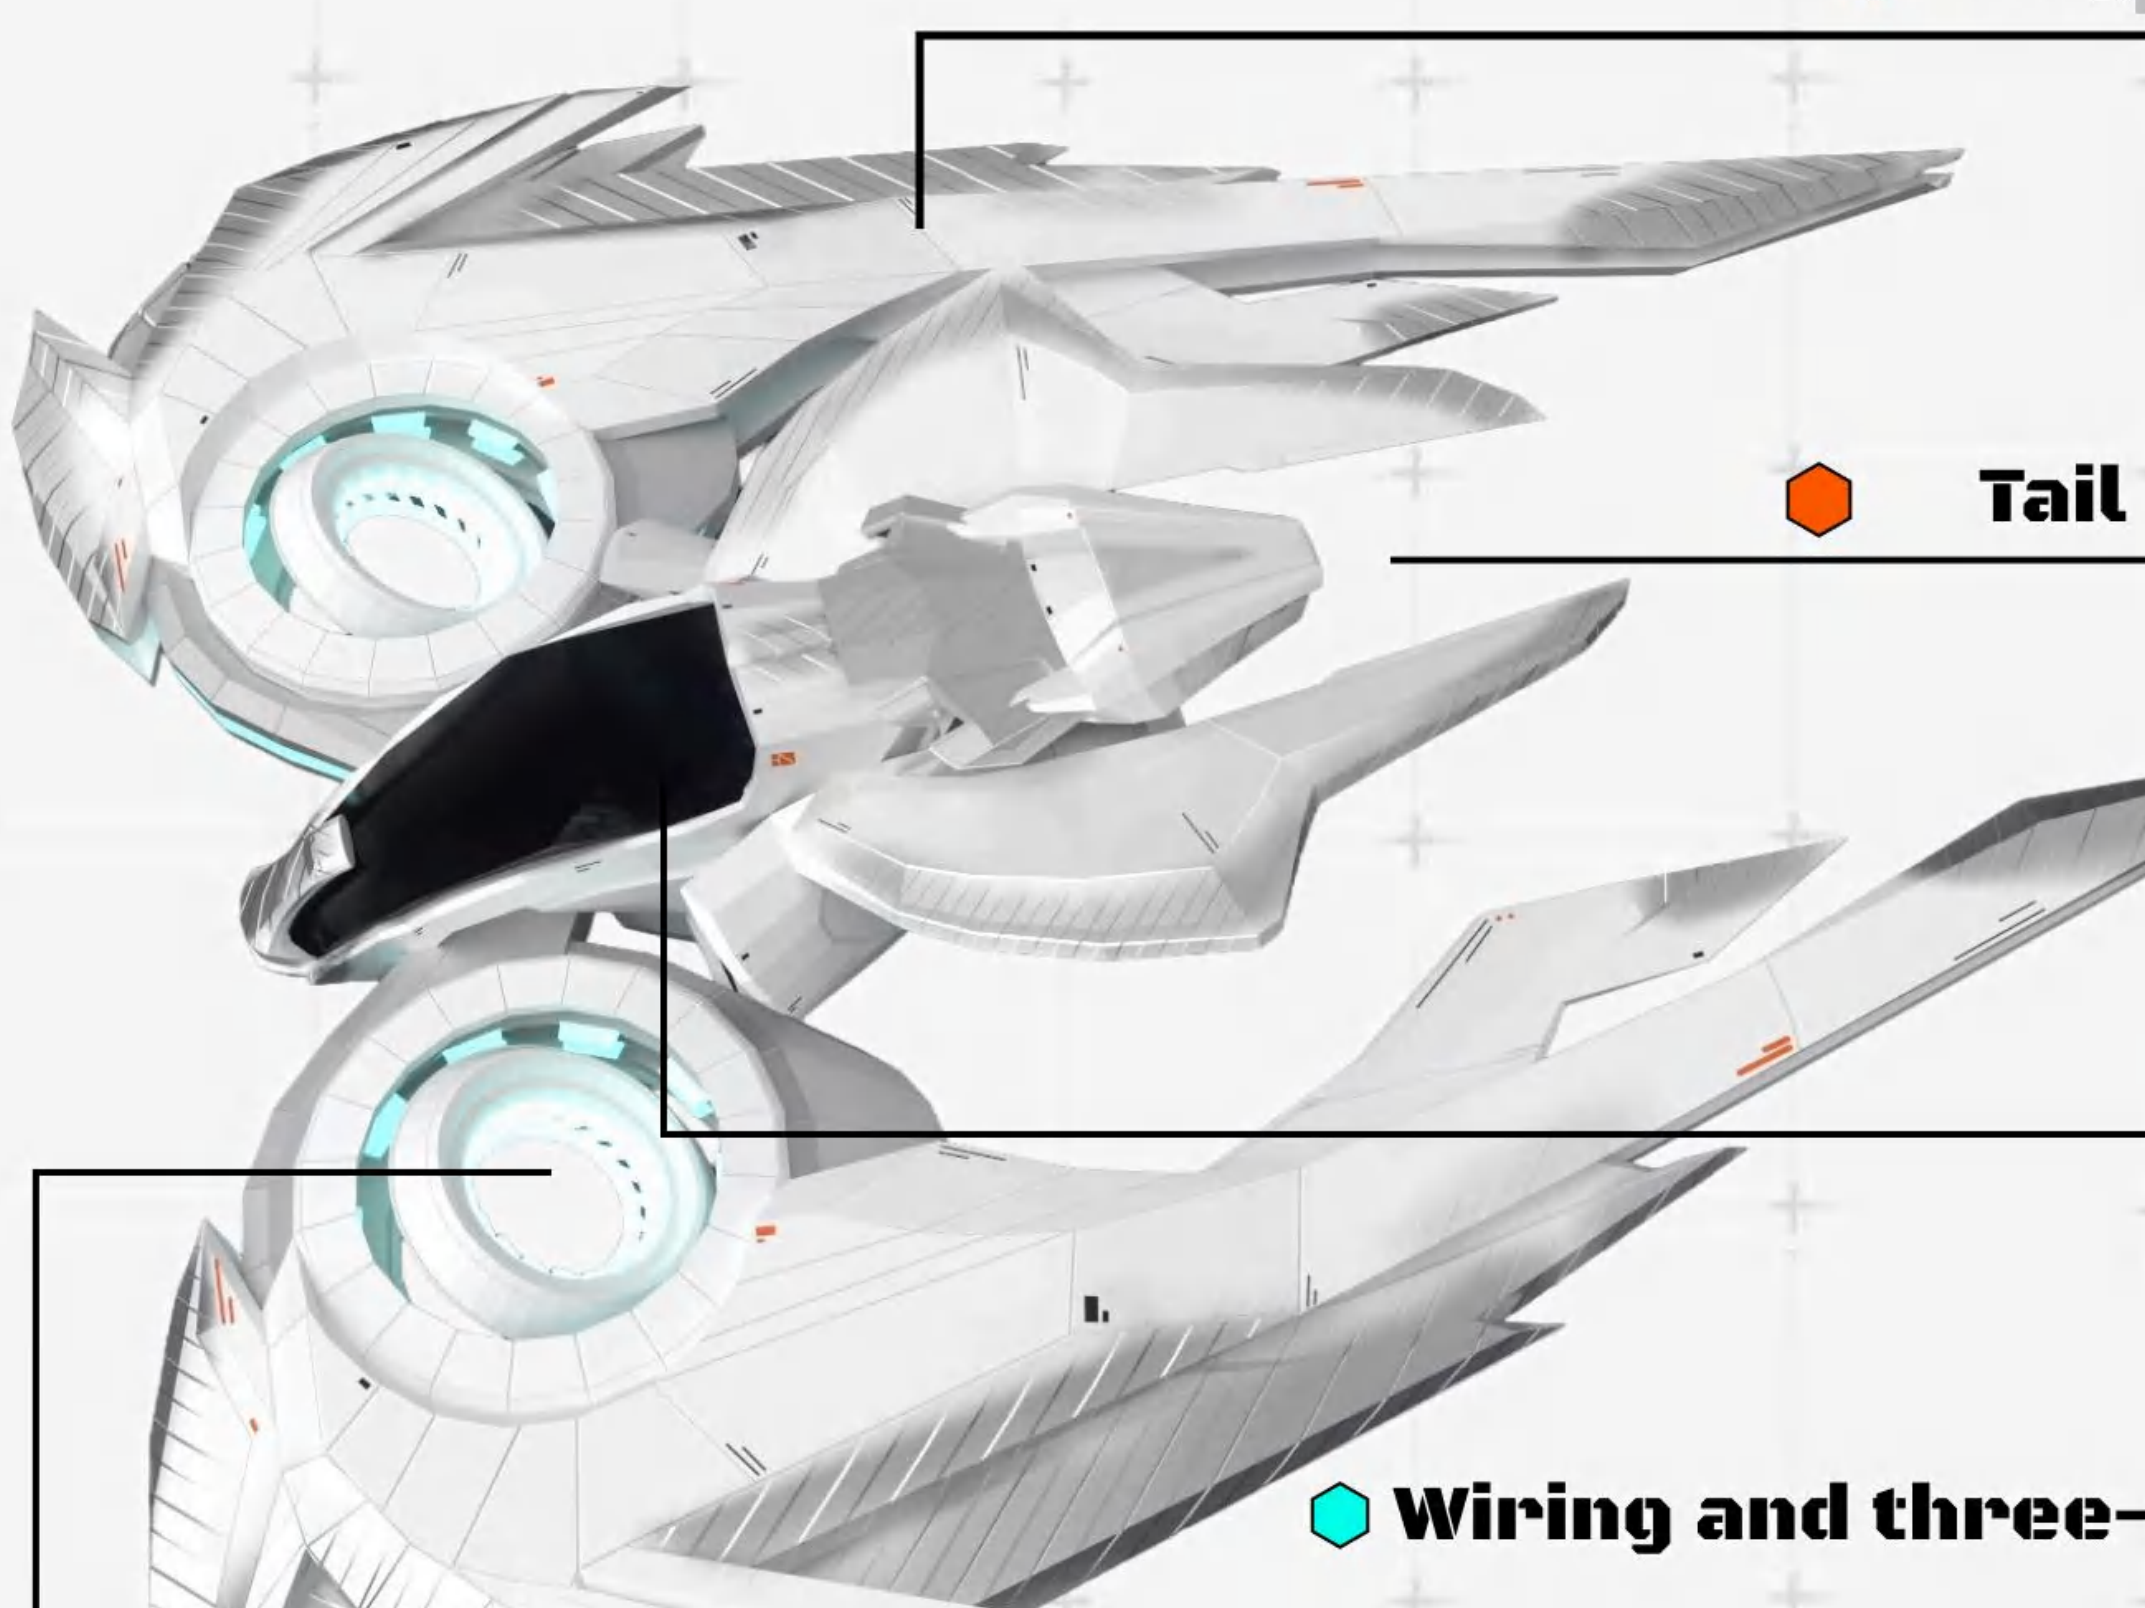


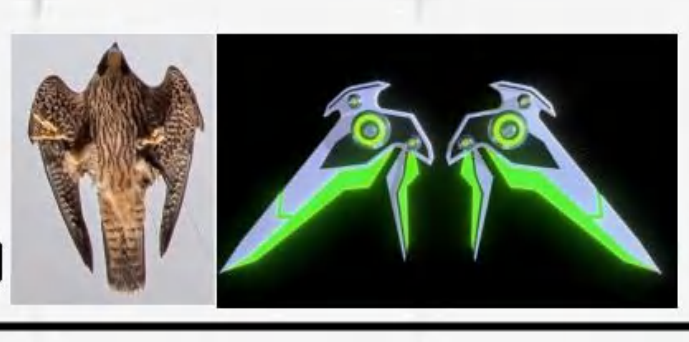
FalconWing

Draft drawing

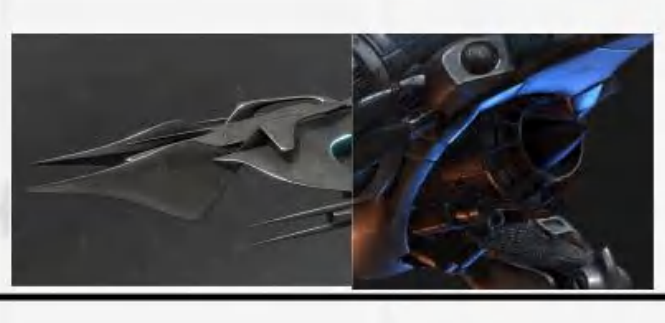
Initial model



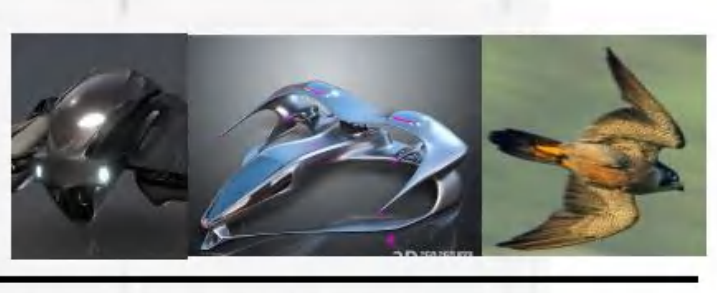




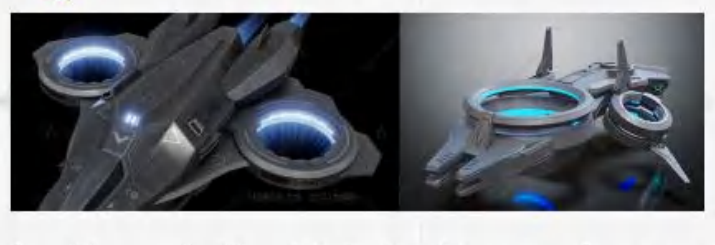
Wing Designed with sharp streamlined mecha structure, referencing sci-fi creature wings and tech energy patterns.



Tail References sci-fi fighter tail and biological tail forms, designed as forked mecha tail with balance function.

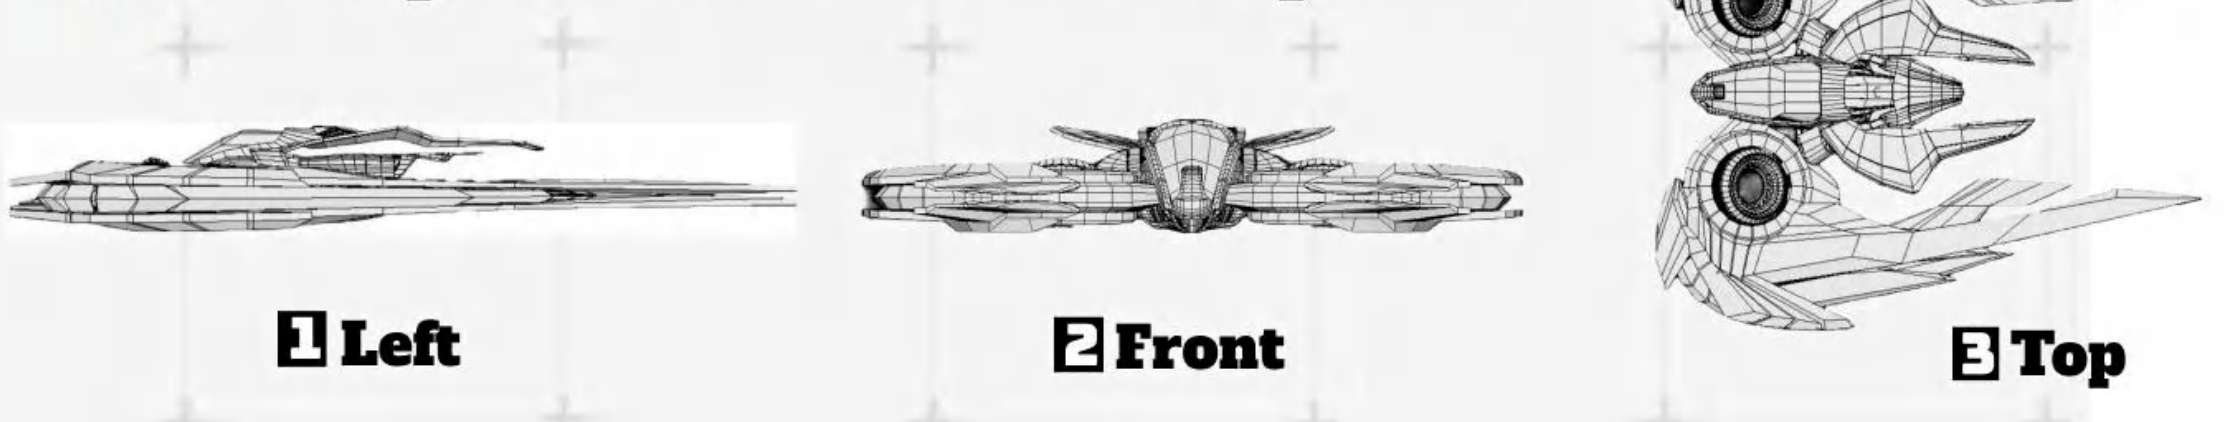


Fuselage Blends sci-fi aircraft streamline and bionic creature body shape, with mecha armor structure.



Turbine Inspired by sci-fi vehicle turbine engines and mechanical power cores, with industrial turbine textures.

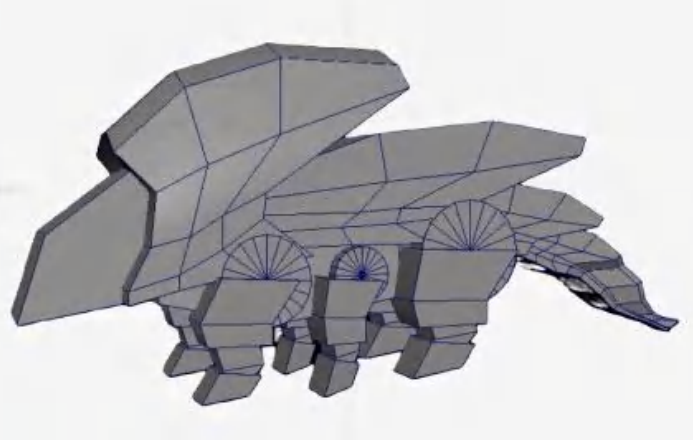
Wiring and three-view diagrams

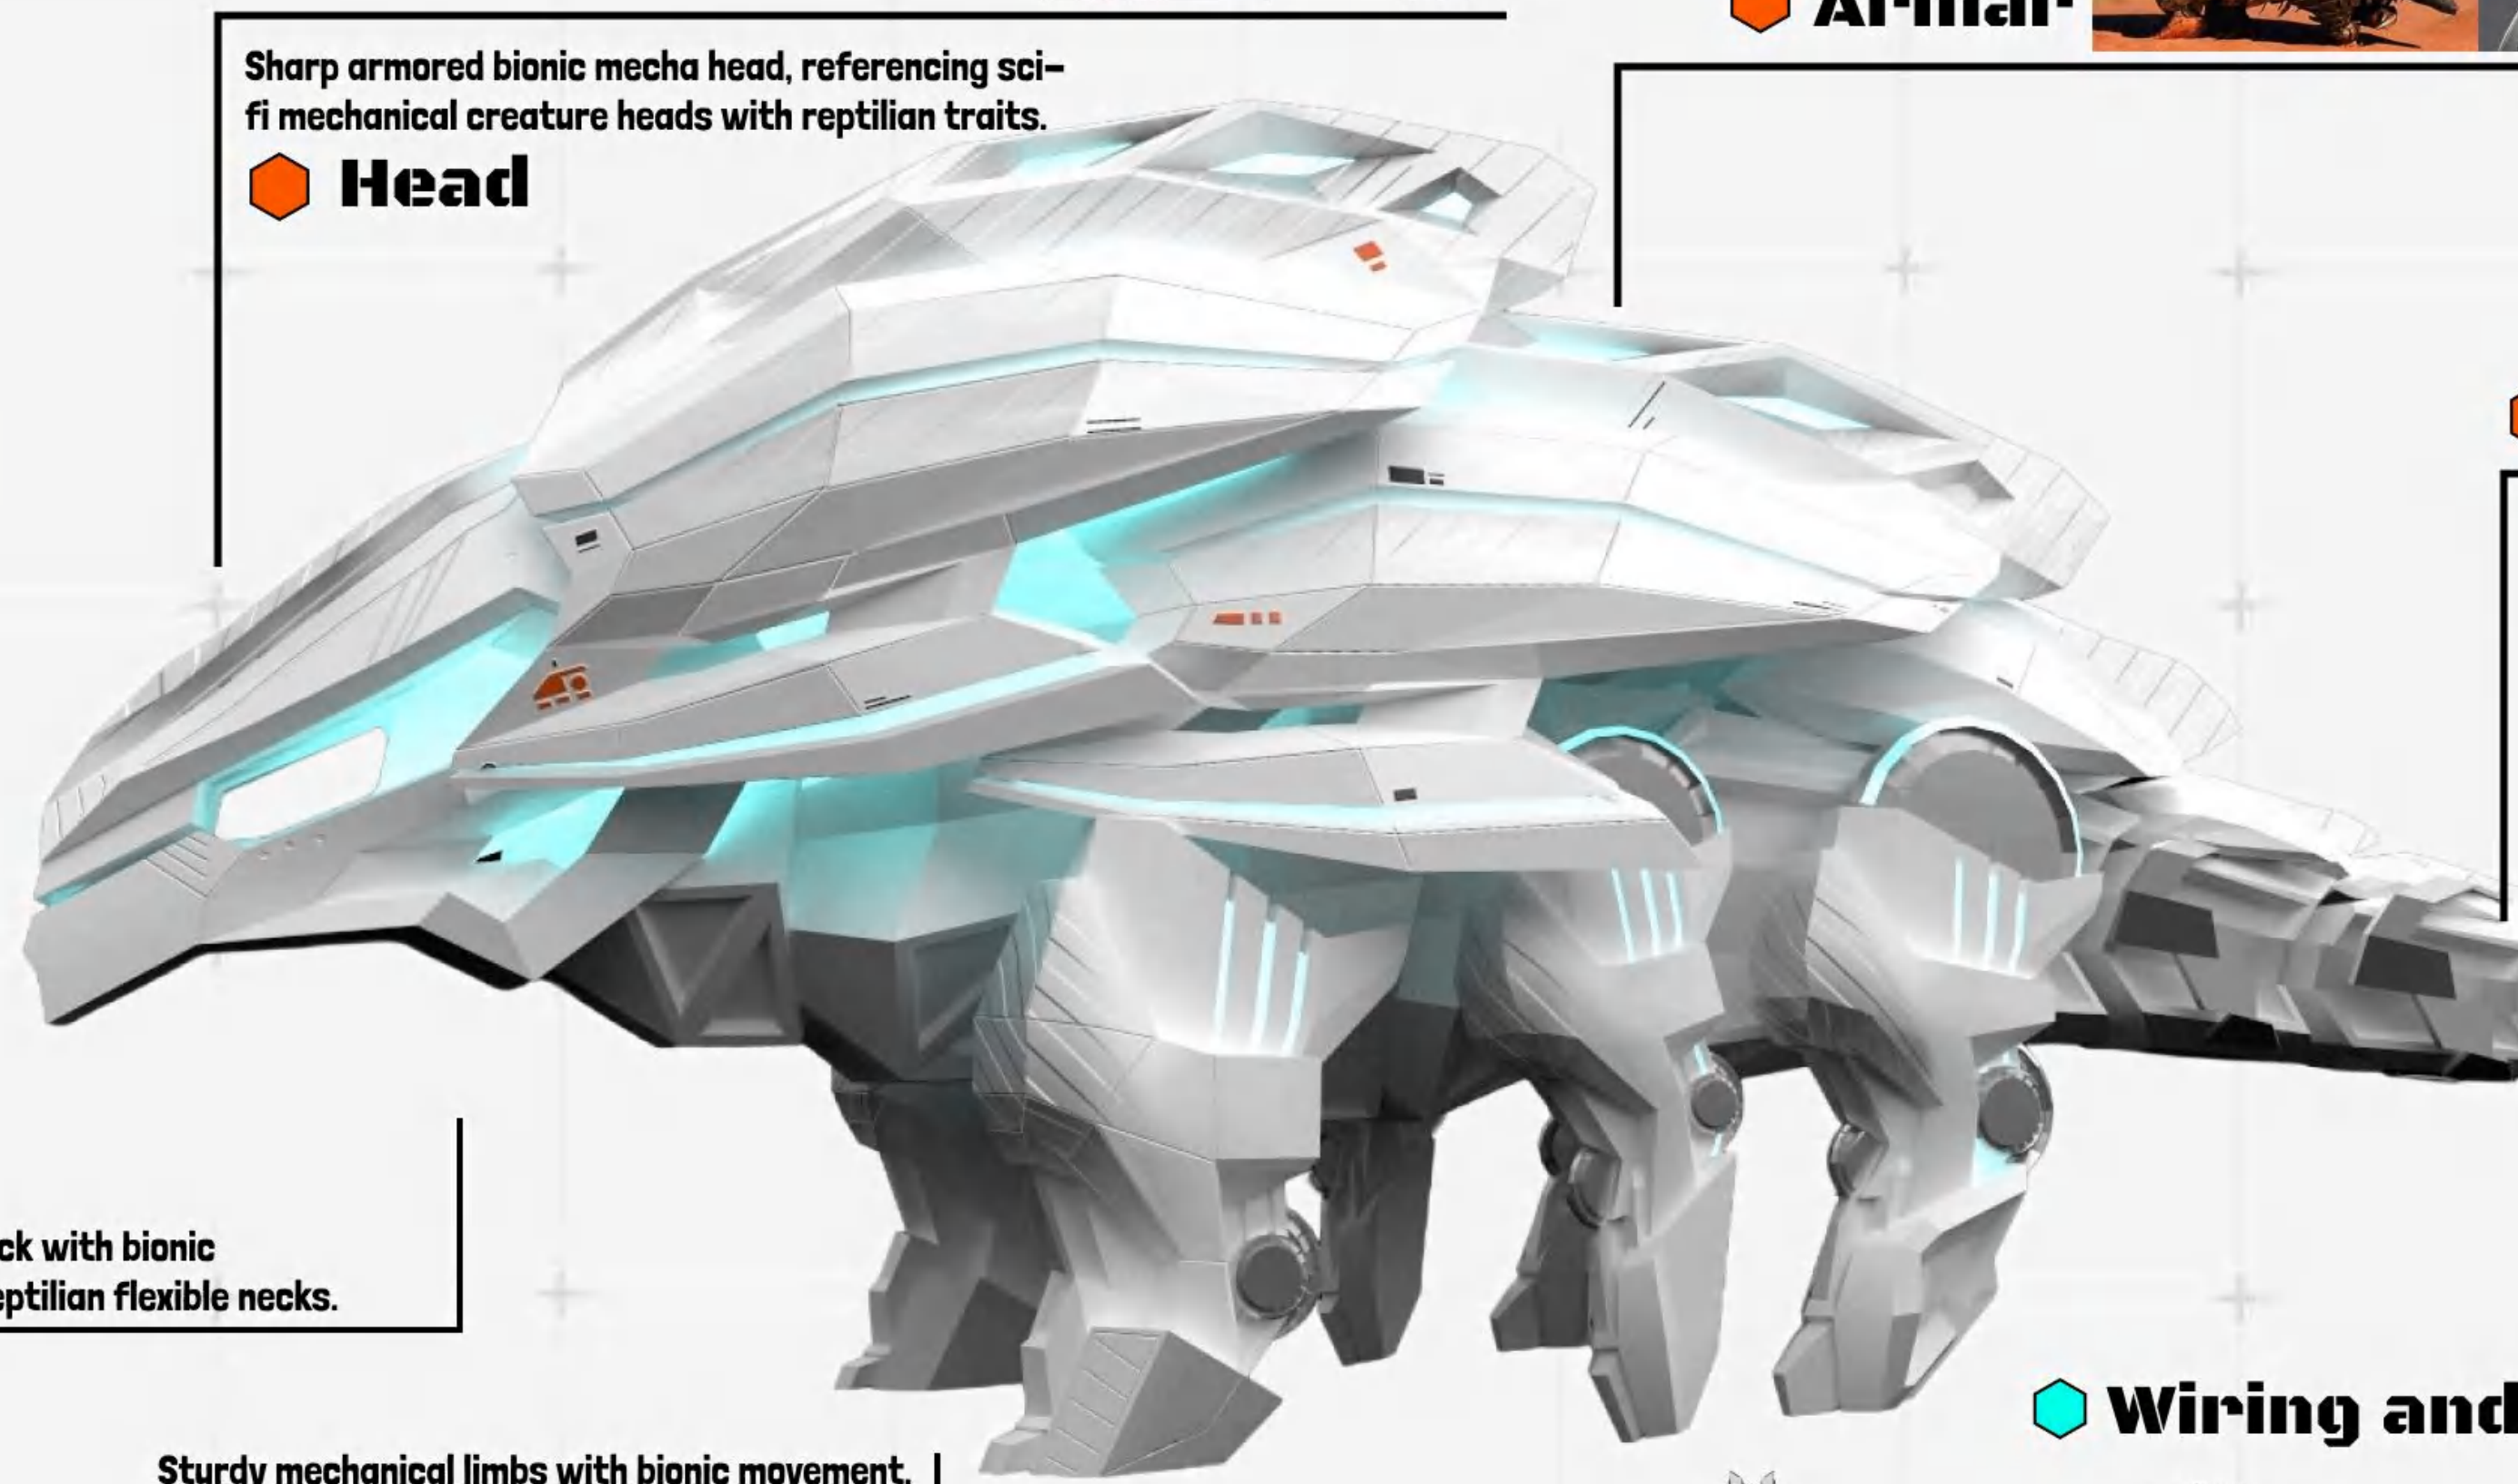


ScaleTread

Draft drawing

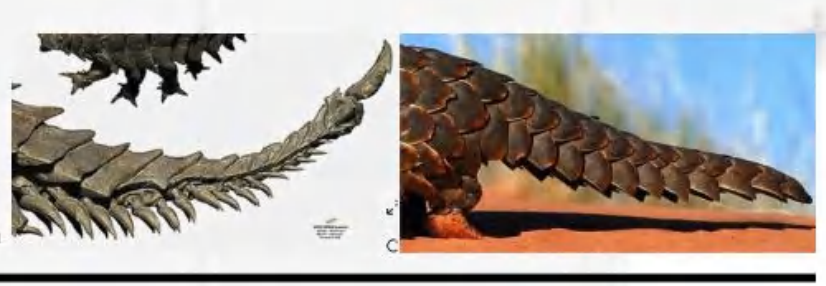
Initial model





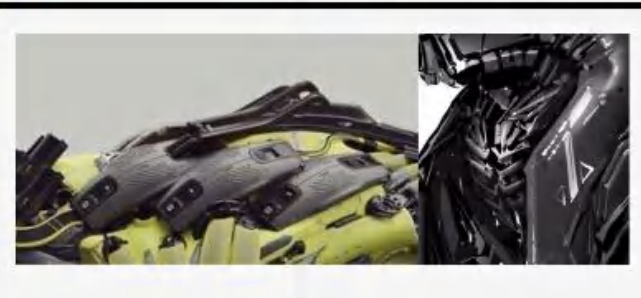
Head Sharp armored bionic mecha head, referencing sci-fi mechanical creature heads with reptilian traits.

Armar Layered textured mecha backplate, drawing on reptile scaled armor and mecha battle armor.

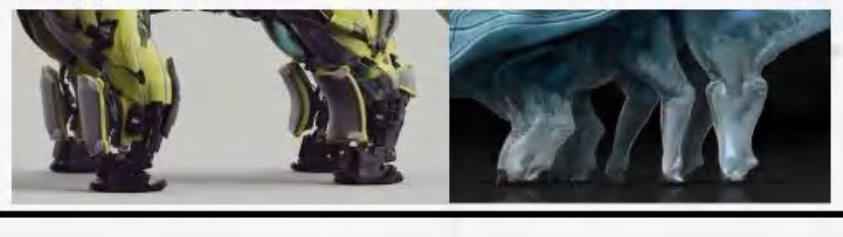


Tail Spiky segmented mechanical tail, taking cues from reptilian long tapered tails with sci-fi mecha details.

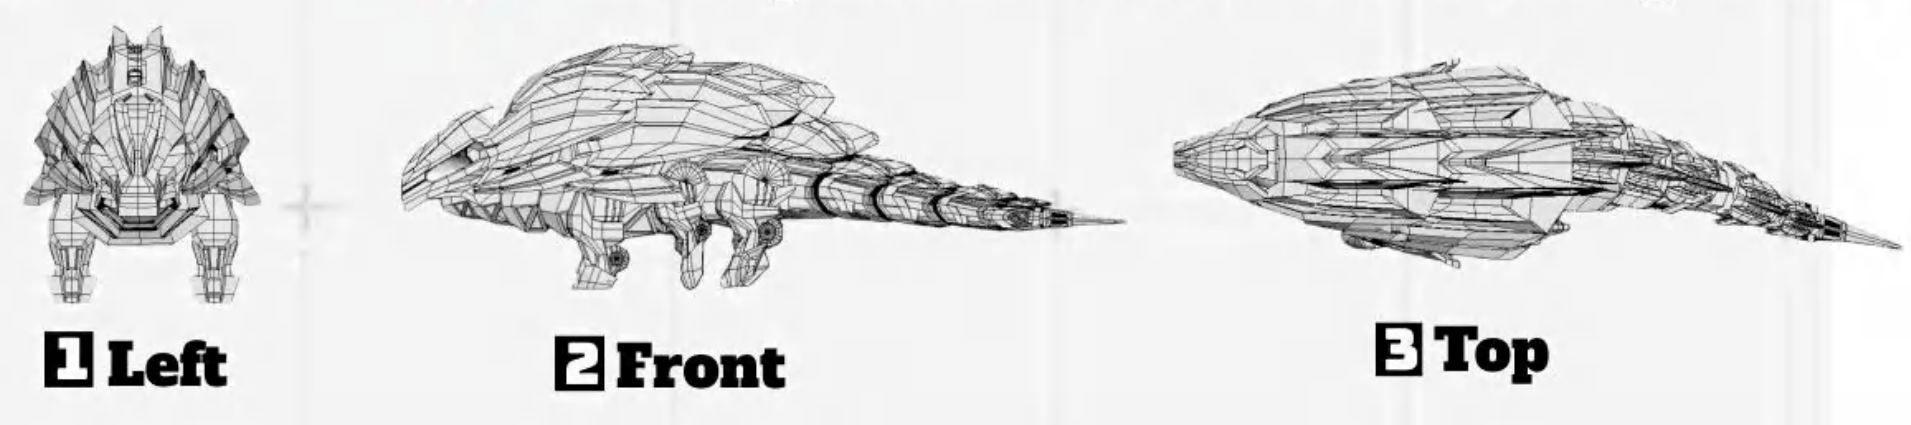
Neck Segmented mechanical neck with bionic articulation, inspired by reptilian flexible necks.



limbs Sturdy mechanical limbs with bionic movement, combining beast limb structure and mecha joint design.



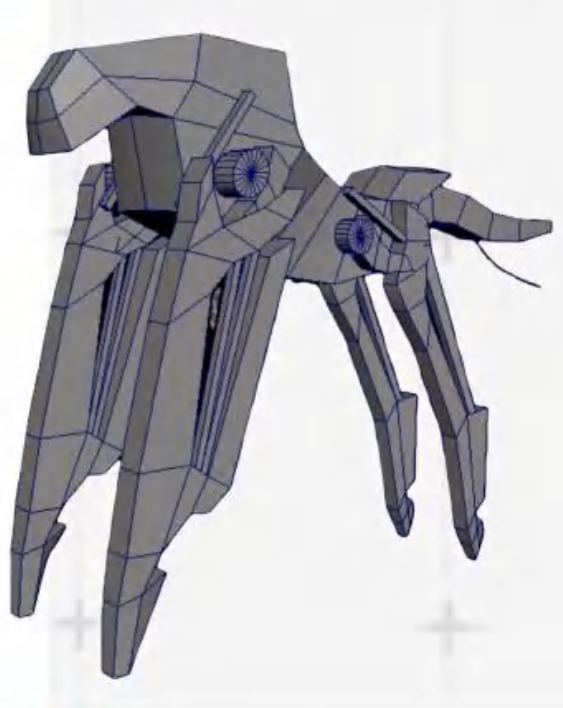
Wiring and three-view diagrams

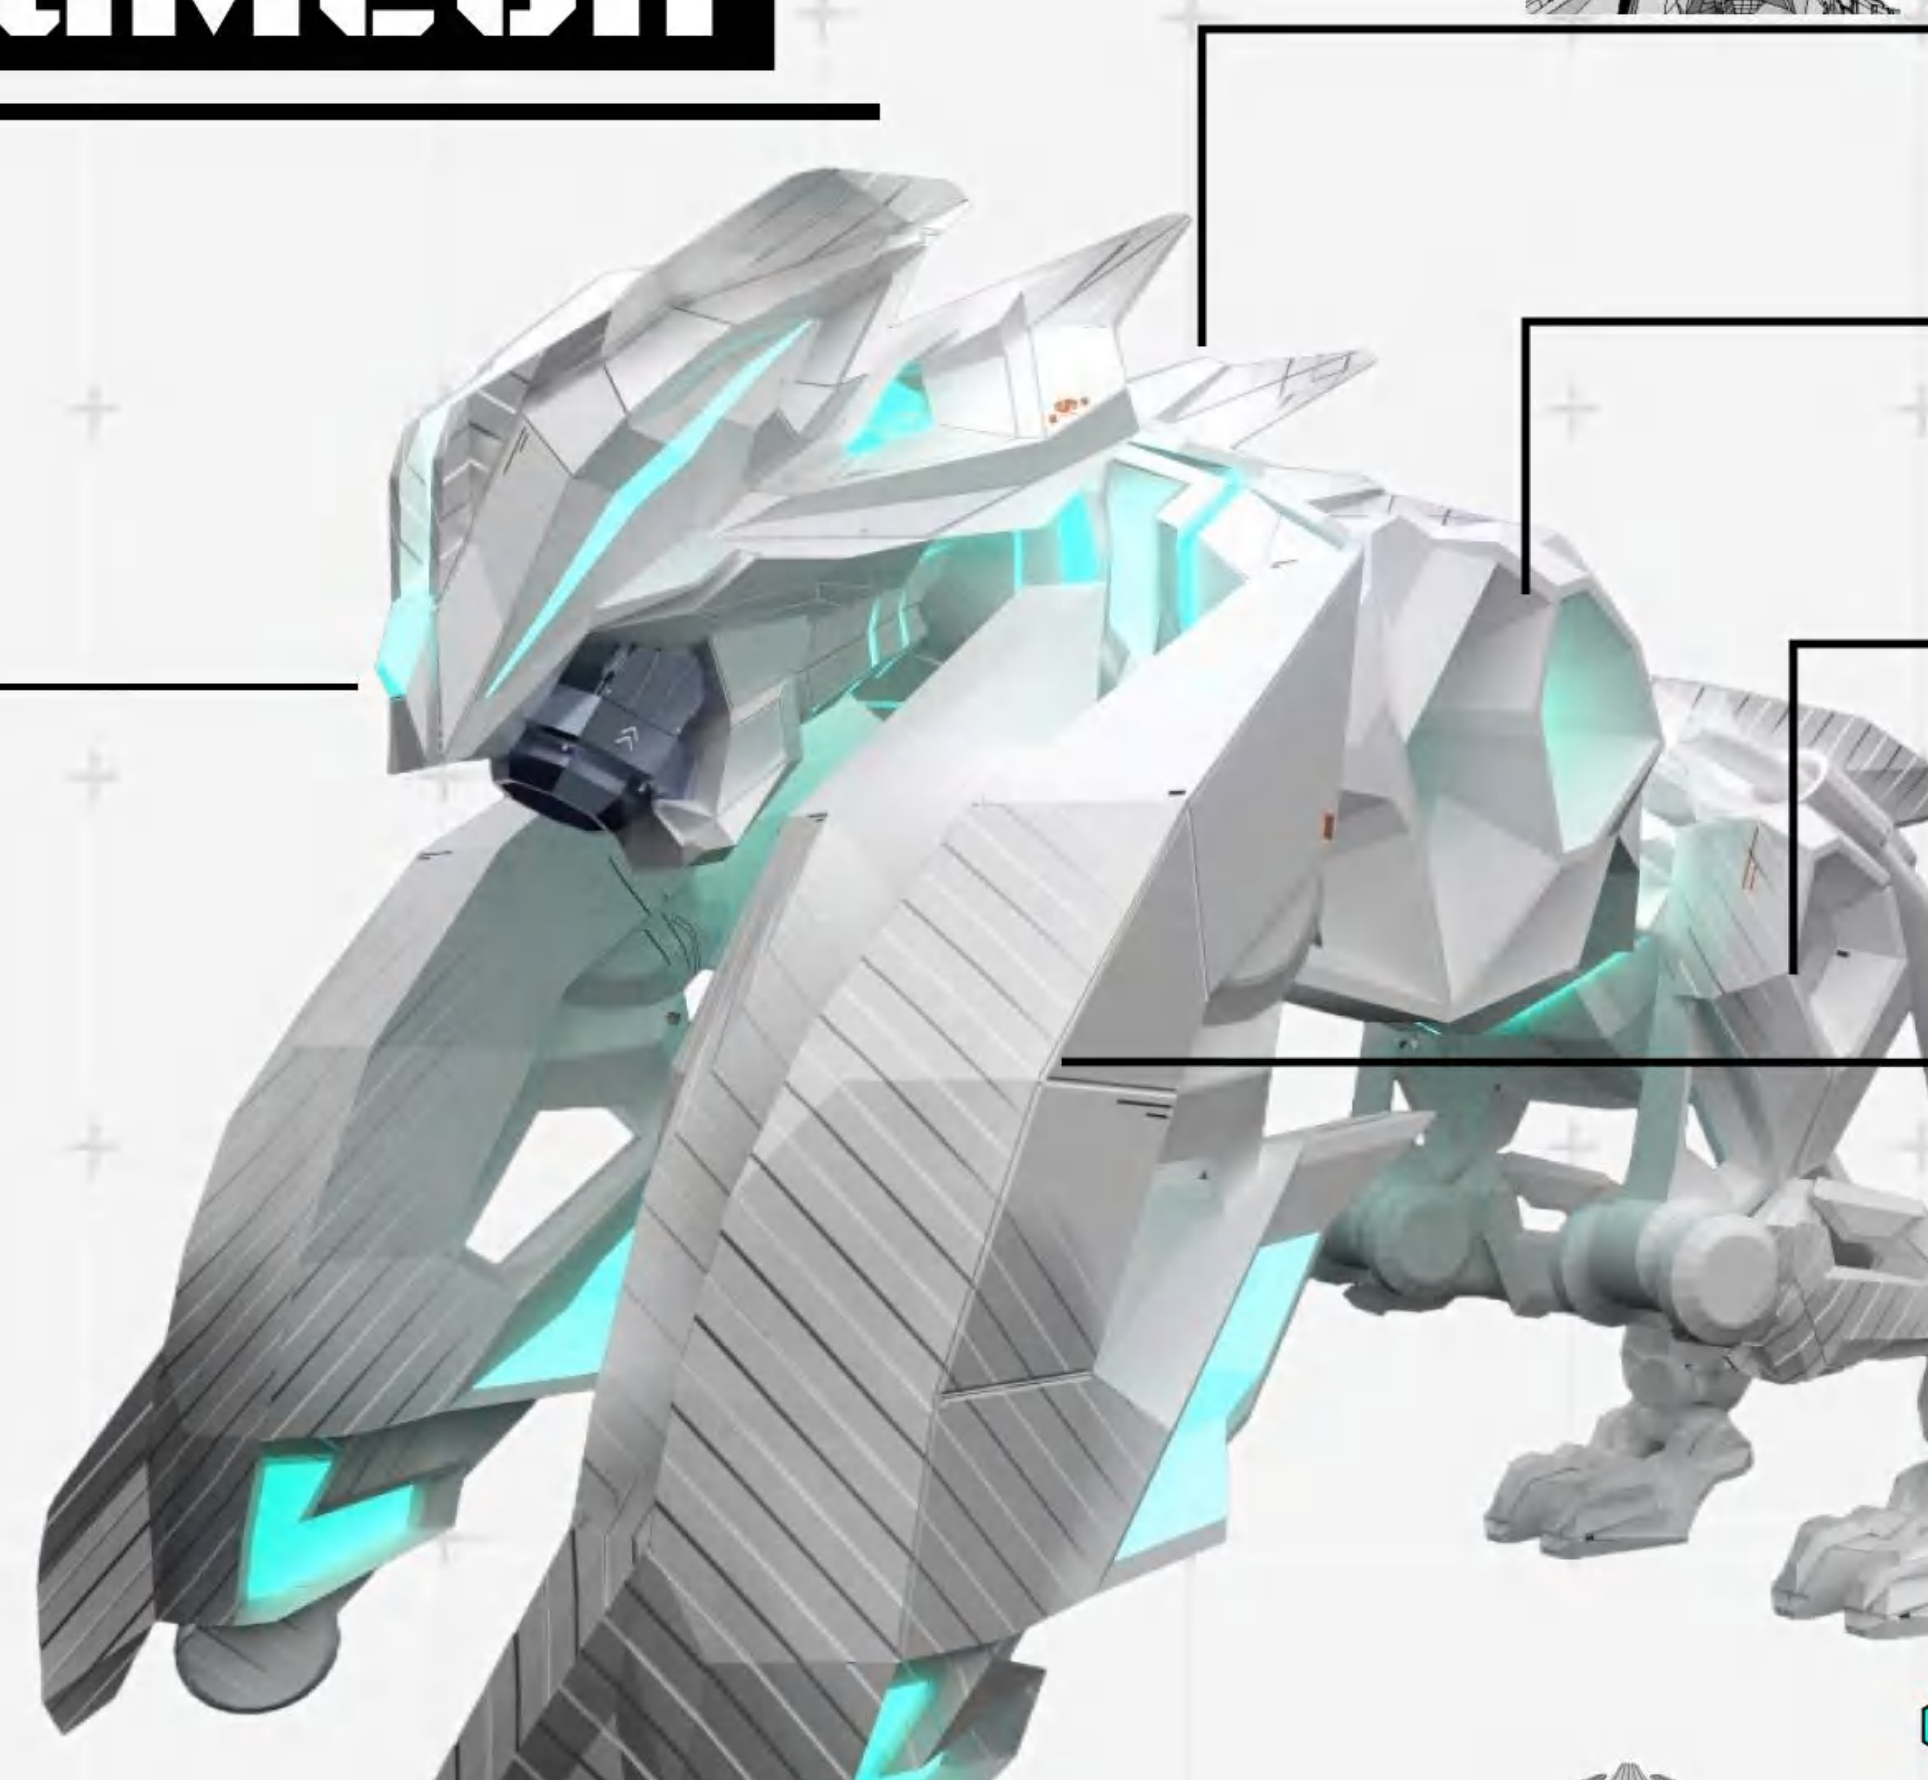


GorillaMech

Draft drawing

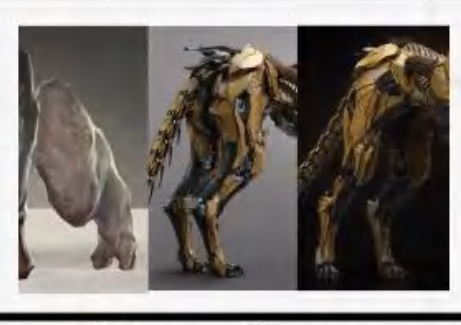
Initial model



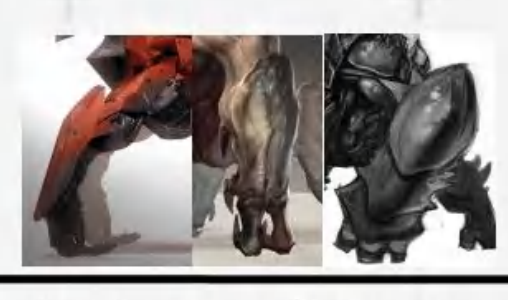


Neck Thick segmented mechanical neck/back, drawing on gorilla neck musculature and mecha spinal armor design.

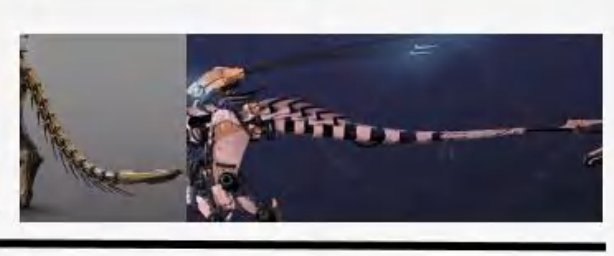
Waist Flexible segmented mecha waist, inspired by gorilla torso articulation and mecha torsion joint design.



Forelimb Muscular mechanical forelimbs, combining gorilla arm morphology with heavy mecha joint and armor design.

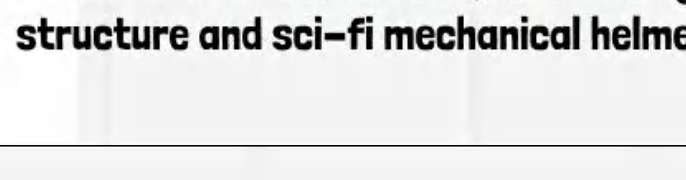


Hindlimb Sturdy mechanical hindlimbs, drawing on gorilla leg structure and mecha load-bearing limb engineering.



Tail Streamlined mechanical tail, taking cues from primate tail form with sci-fi mecha tail fin details.

Head



Robust bionic mecha head, referencing gorilla skull structure and sci-fi mechanical helmet design.
