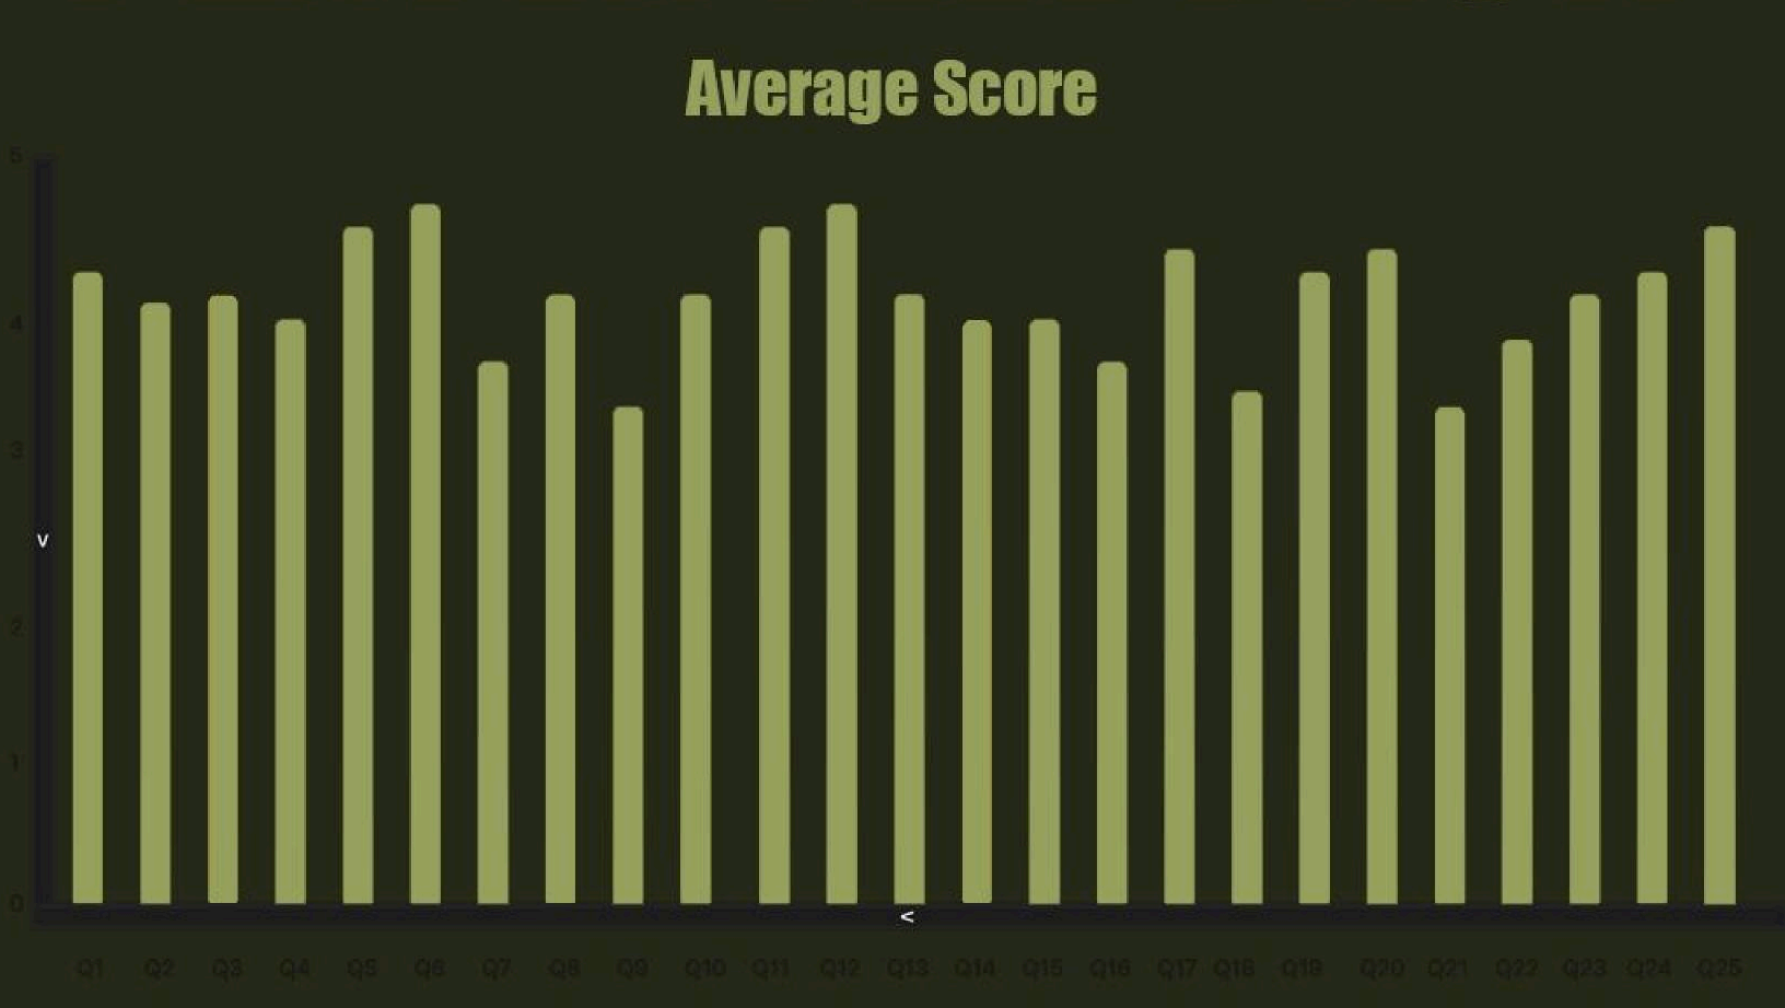
KING OF WAR

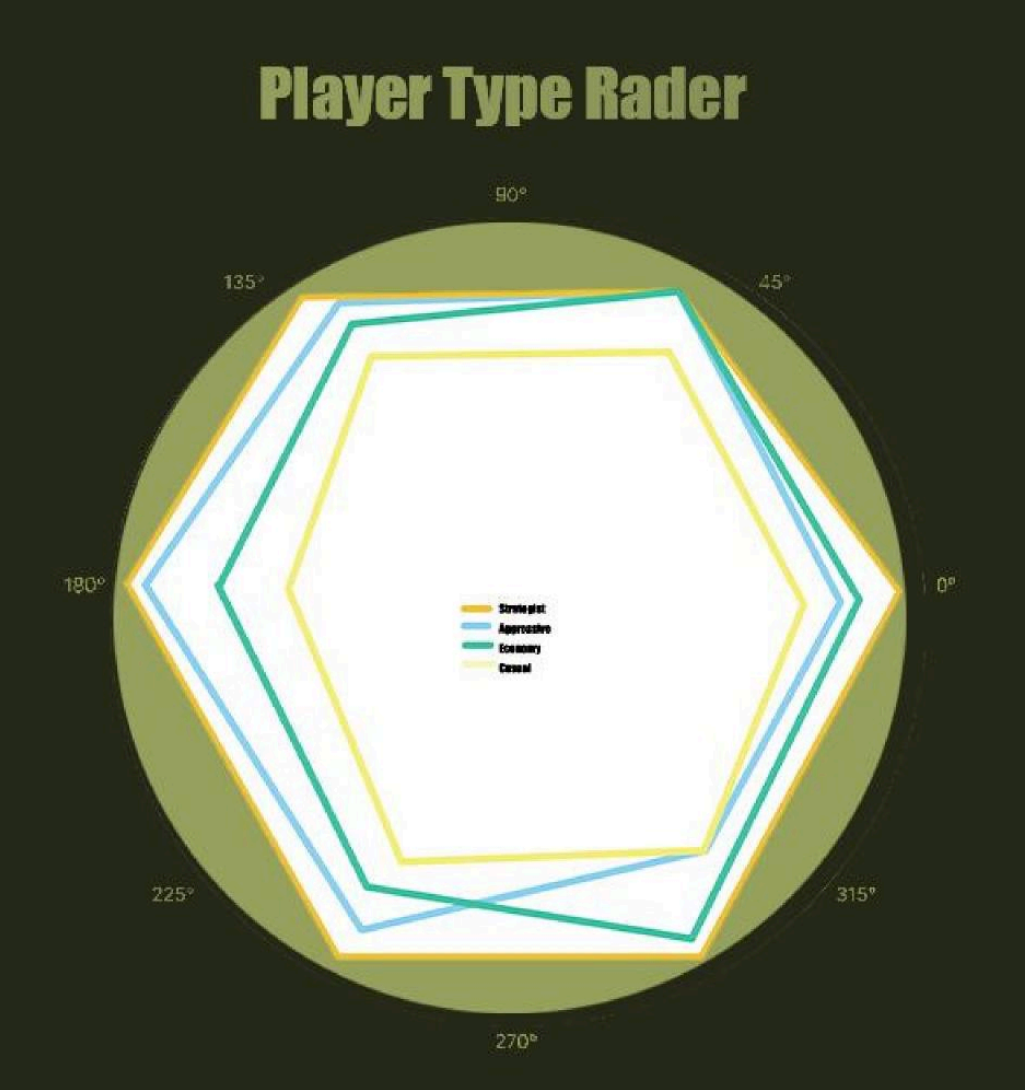
"KING OF WAR" combines the real estate acquisition mechanism with the military confrontation system, creating a dual enjoyment of economic strategy and battlefield combat. Players not only need to calculate funds carefully but also command troops to fight, thus obtaining an immersive military command experience. This multi-level gameplay makes the game both thrilling and highly playable and replayable.

The game emphasizes resource management, troop deployment and risk decision-making. Players need to flexibly allocate between their "mobile army" and "stationary forces", and weigh the costs and benefits in both offensive and defensive strategies. This mechanism can effectively train players' logical thinking, strategic planning and on-the-spot judgment, and has positive value for mental training for both teenagers and strategy game enthusiasts.

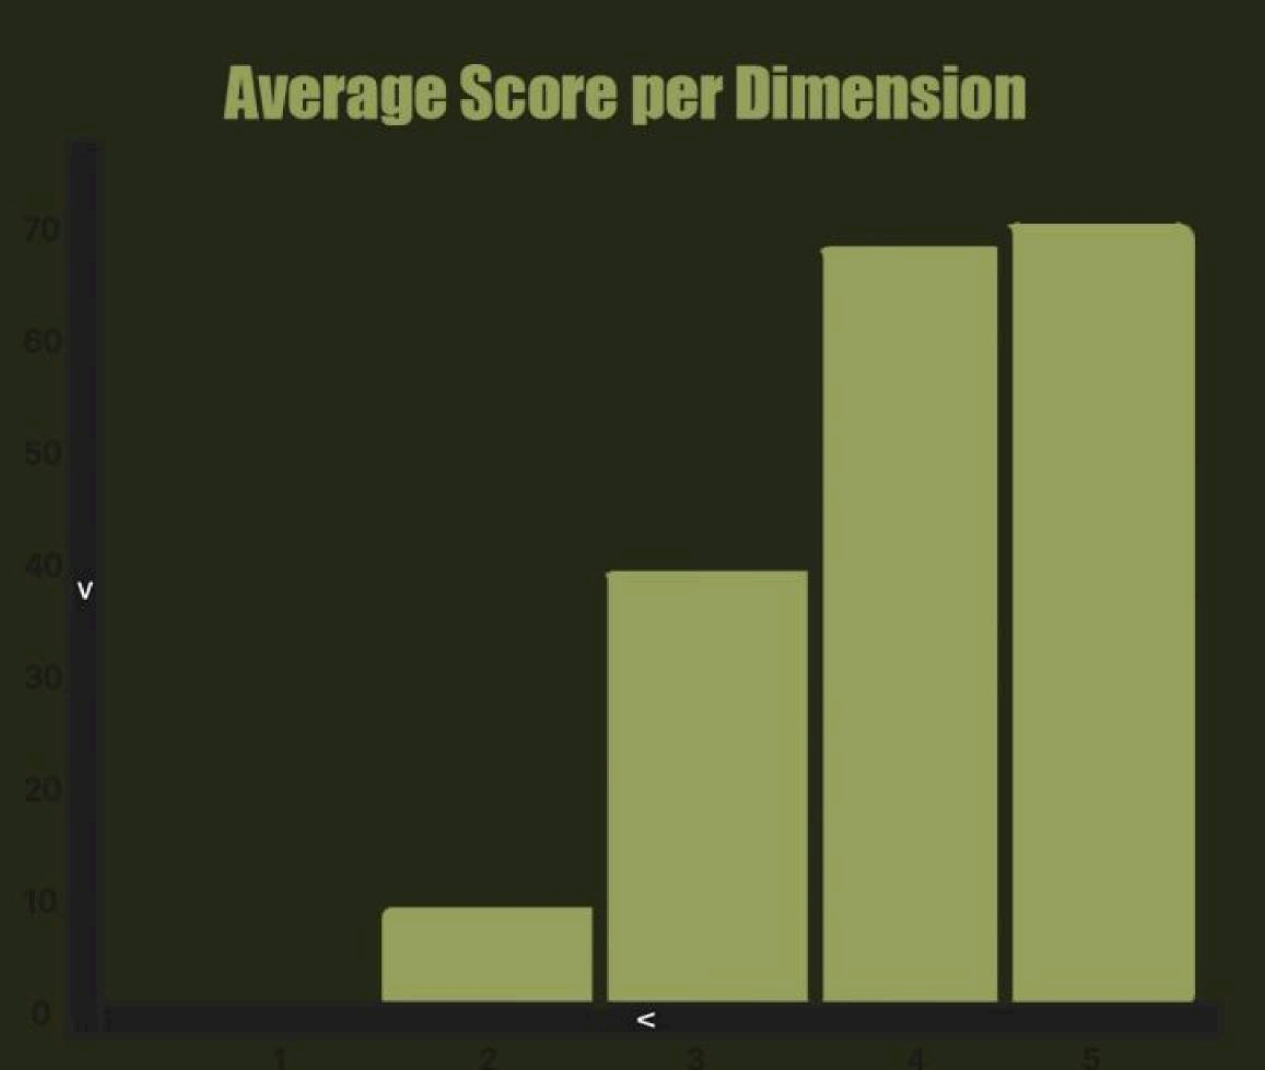
PLAYER FEEDBACK



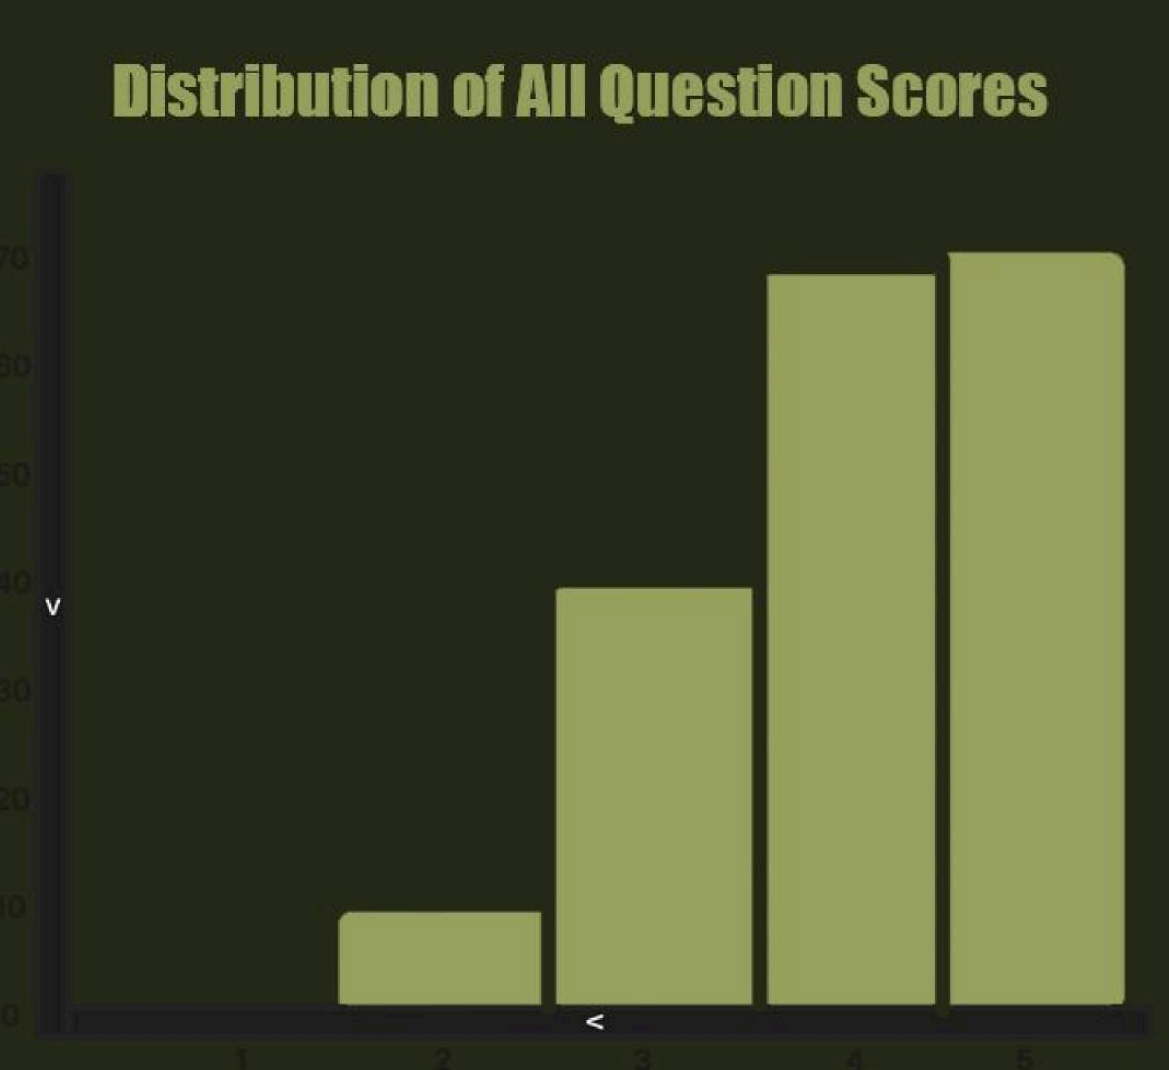
Average Score



Player Type Rader



Average Score per Dimension



Distribution of All Question Scores

Player feedback is largely positive, with most scores between 4–5, reflecting strong approval of the game's clarity, strategic depth, and overall experience; despite varying preferences, all player types agree the core mechanics are solid and engaging.

Overall, War King effectively engages players of different playstyles, who generally agree that the economic system, combat flow, and unit management are well-balanced. While certain mechanics could be refined further, the game delivers a stable, strategic experience and shows strong potential for continued development and playtesting.

KING OF WAR

PROJECT INSPRITION:

The inspiration for "King of War" stems from the recreation of the classic "Monopoly"-style board game, integrating the core elements of economic competition and military confrontation. The design concept is derived from the reflection on the relationship between war and resources: the accumulation of wealth and the expansion of military power are in a state of mutual restraint. Players must manage their territories like merchants and command their armies like warlords. By introducing elements such as "lost ammunition", the game adds more variables and tension to the battle situation. In terms of visual and atmosphere, it draws on the style of American war comics and wartime propaganda posters to enhance the sense of immersion and uniqueness. Overall, the inspiration for this project lies in the deep integration of the framework of traditional real estate board games with the depth of war strategy, creating a new experience that is both social, immersive and innovative.

BACKGROUND:

In the not-too-distant future, the world plunged into a complete division. The old national order had collapsed, and the international alliance was rendered ineffective. Countless wars destroyed cities and civilizations, leaving behind fragmented wastelands and broken ruins.

On this ruinous land, a new order has not yet been established. Warlords rose up like wolves. They relied on force and wealth to establish their own spheres of influence, competing for cities, fortresses and supply stations.

In this chaos, a batch of mysterious "lost armaments" were scattered across various battle zones. They might be remnants of super weapons from the Cold War era, or experimental products from future technology laboratories. It is said that possessing these armaments could reverse the war situation overnight. For this reason, every warlord was desperately searching for these relics, hoping to become the sole ruler of the battlefield. Eventually, only one person could emerge victorious on this land of continuous warfare, ascend to the throne, and become the true - "Warlord King"

THE KING OF WAR

GAME OBJECTIVE

The objective of this game is to become the ultimate "King of War". Eliminate all other players through combat and economic means.
When only one player remains on the field, that player immediately wins the game.

Elimination of players: When a player needs to pay any fee (such as defeat compensation, toll, etc.) but does not have enough cannon coins, he must sell his land deeds to obtain funds (the selling price is half of the purchase price of the land plot).
Such as if the player still cannot pay after selling all their assets, they will go bankrupt and be eliminated from the game.

THE KING OF WAR

Component List

- 1 game board
- 30+ land deed cards
- 30+ lost ammunition cards
- 2 six-sided dice
- 1 rulebook
- 4 player commander models (warlords of different colors)
- numerous military unit models (infantry, tanks, aircraft)
- numerous building models (bases, capitals, etc.)
- sufficient number of cannon coins (of different denominations)

Game Setup

1. Place the game board in the center of the table.
2. Shuffle the "Lost Ammunition" cards and place them face down in the designated area on the board.
3. Each player selects a color of the "Commander Model" and receives:
a. 30 cannon coins as starting funds.
b. One corresponding "Infantry" unit as initial troops.
4. All players place their "Commander Model" on the "Supply Station (Starting Point)".
5. Each player rolls one die. The player with the highest roll becomes the starting player, and the game proceeds clockwise.

THE KING OF WAR

Player Turn in Detail

THE KING OF WAR

Core concept: Military unit management

- Recruitment: The units recruited with Agron coins will first enter your "reserve force pool".
- Mobile Army (Mobile Forces): You can immediately dispatch the units in the reserve force pool to your commander's piece to become the mobile army. This army will move along with your commander and serves as the main force for initiating attacks.
- Garrison (Garrison Forces): You can also dispatch the units in the reserve force pool to any of the territories you own. These units will remain on that plot and become the garrison forces, serving as the main force for defending the territory.
- During your management phase, you can freely transfer your units between the commander (mobile) and the territory (garrison) position.

THE KING OF WAR

Core rule: Combat system

THE KING OF WAR

Congratulations! You have successfully mastered all the game rules of the War King. Now it's time for you to show your skills and achieve victory in the game. Use your wisdom to become the true War King! Have fun playing!

The King of War is a tabletop game that blends warfare and economic strategy. Players roll dice to move, purchase and occupy lands, recruit and deploy military units, and compete through tactical offense, defense, and resource management. Battles are decided by comparing combat power, and defeated players may face bankruptcy and elimination. In the end, only the last surviving player will be crowned the true "King of War."

DESIGN CONTENT

Design Concept Introduction

The core design of this game revolves around the cycle of resource acquisition – army development – battle resolution – event impact, creating a balance between strategy and luck. Players start with a reserve of Cannon Coins and gradually expand their power by purchasing lands, constructing buildings, and recruiting or upgrading various military units. Armies can either move with the commander to serve as the main attacking force, or remain stationed on owned territories to provide defense. At the same time, the inclusion of both positive and negative event systems adds unpredictability—players may gain extra resources and special abilities, or face sudden crises and penalties. These mechanics ensure a dynamic and tension-filled gameplay experience, where players must manage resources wisely, deploy their forces strategically, and adapt to unexpected challenges in order to triumph. Ultimately, only the one who masters both war and economy will earn the title of the undisputed "King of War."

REFERENCE

In the reference stage of this project, I primarily analyzed the overall structure and board design of "Monopoly" and "Da Fu Weng" (Chinese Monopoly variants). These classic board games are highly engaging and universally appealing due to their turn-based movement, circular board layout, and property acquisition mechanics, and thus became the foundational inspiration for my framework. Based on this structure, I preserved the core gameplay loop of "move–occupy–gain income," while integrating more confrontational military elements to create tighter and more strategic gameplay.

From the perspective of art and atmosphere, I drew inspiration from several war-themed and strategy board games. For instance, some games emphasize a retro style and symbolic military imagery in their card design, allowing players to instantly immerse themselves in a wartime setting; others strengthen atmosphere through map textures and color palettes; while some adopt a tactical board-like UI design to highlight a sense of order and military strategy. These visual elements inspired me to adopt a wartime propaganda poster style for War Lord, in order to create a distinctive thematic identity and immersive mood.

By combining these references, I was able to not only to learn from the proven mechanics of classic board games, but also to integrate the visual and thematic strengths of war strategy titles. This dual focus on rules and aesthetics ensures that War Lord both preserves the familiar appeal of traditional board games and offers a unique experience centered around warfare and strategy.
