HUAWEI TONG

Proficient in core 3D modeling skills, I master software like Substance and Maya, specializing in character/scene modeling and material rendering. Capable of independently completing the full workflow from concept design to final output, I focus on detail refinement and visual effect optimization. Seeking 3D modeling roles such as game modeling, film/TV prop modeling, and industrial design visualization, I aim to apply professional skills to real projects, accumulate experience and refine techniques in practice. In my spare time, I love cycling—it cultivates endurance and concentration, and lets me capture inspiration from architectural structures and light changes outdoors, bringing fresh ideas to modeling.

Softs:

MAYA Figma UE Substance Painter
