
LANBIAN TOWN

"LANBIAN ZHEN":
Low-poly
medieval island
town

Inspiration

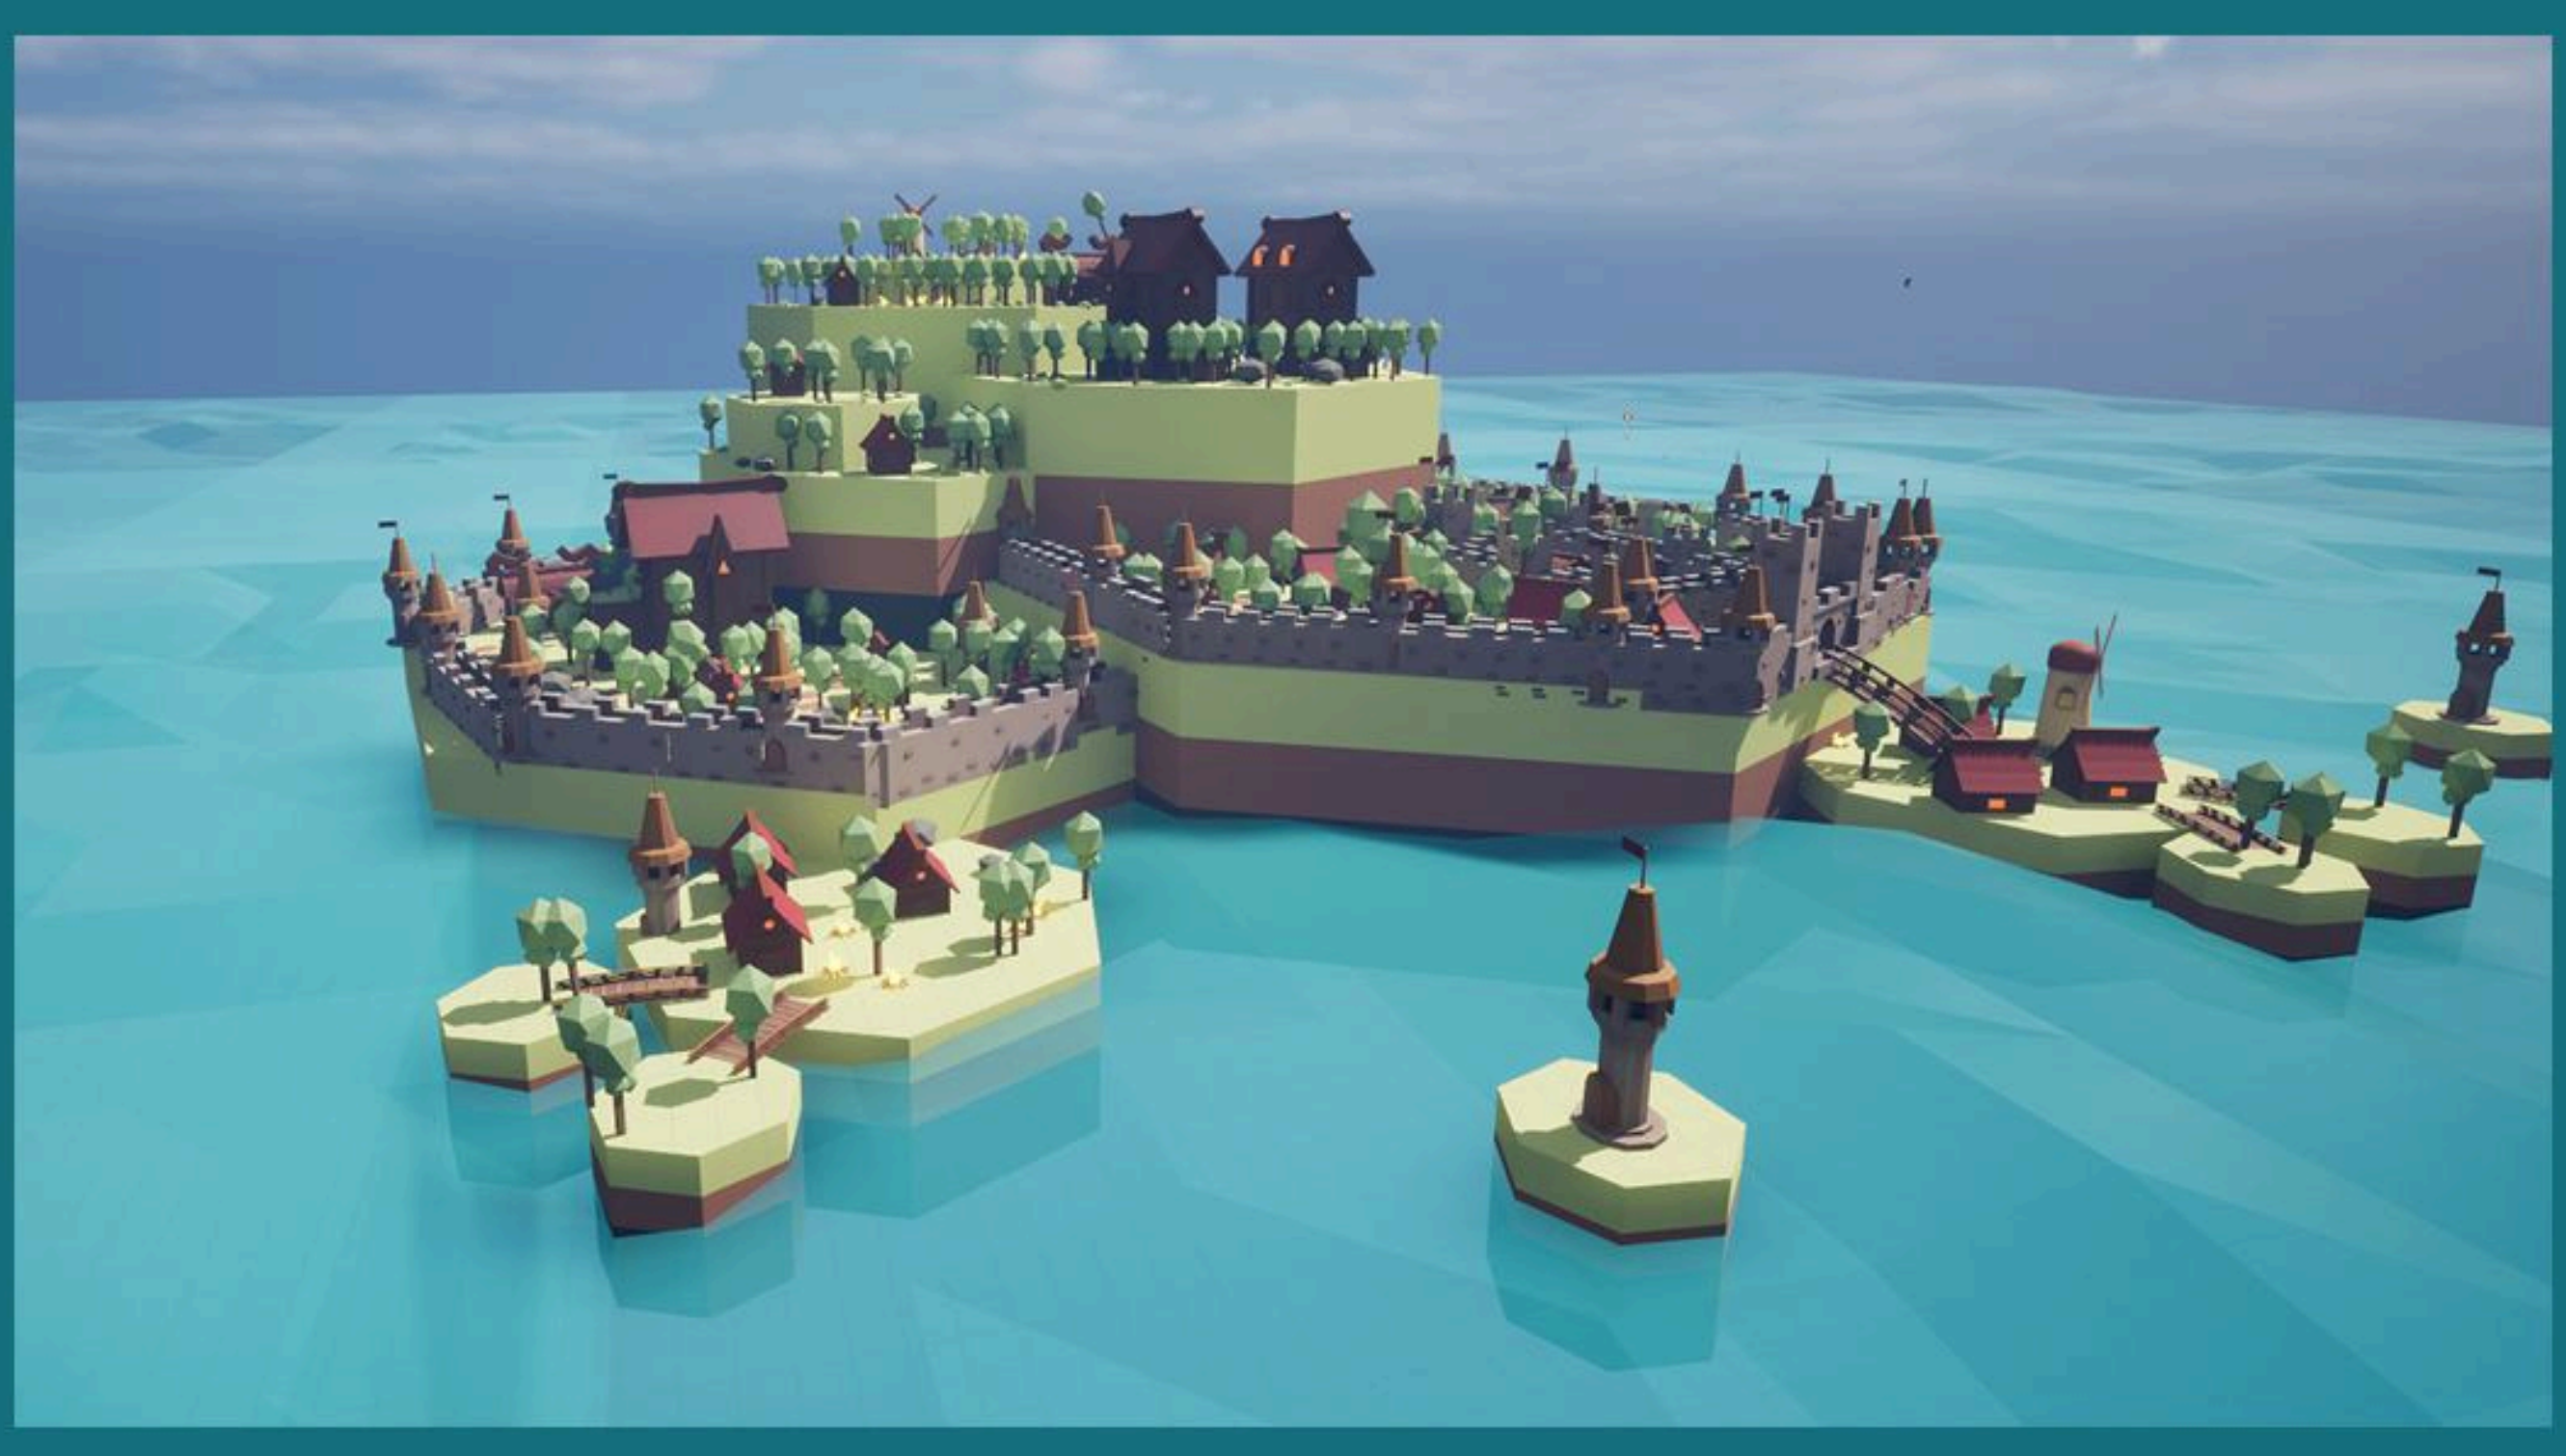
This is my stylized work, inspired by Human: Fall Flat and Totally Accurate Battle Simulator (TABS). It shows an ocean-surrounded castle with simple geometric shapes and bright colors — walls and towers built from block-like structures, paired with fresh brown and green tones, and dotted with simplistic trees. The piece blends the whimsy of Human: Fall Flat and the battle vibes of TABS to create a childlike, fantastical castle settlement.

HUMAN
Fall Flat

The game that serves as a reference for my work is *Human: Fall Flat*. I particularly love its stylized materials, which are extremely minimalist.

TABS
TOTALLY ACCURATE BATTLE SIMULATOR

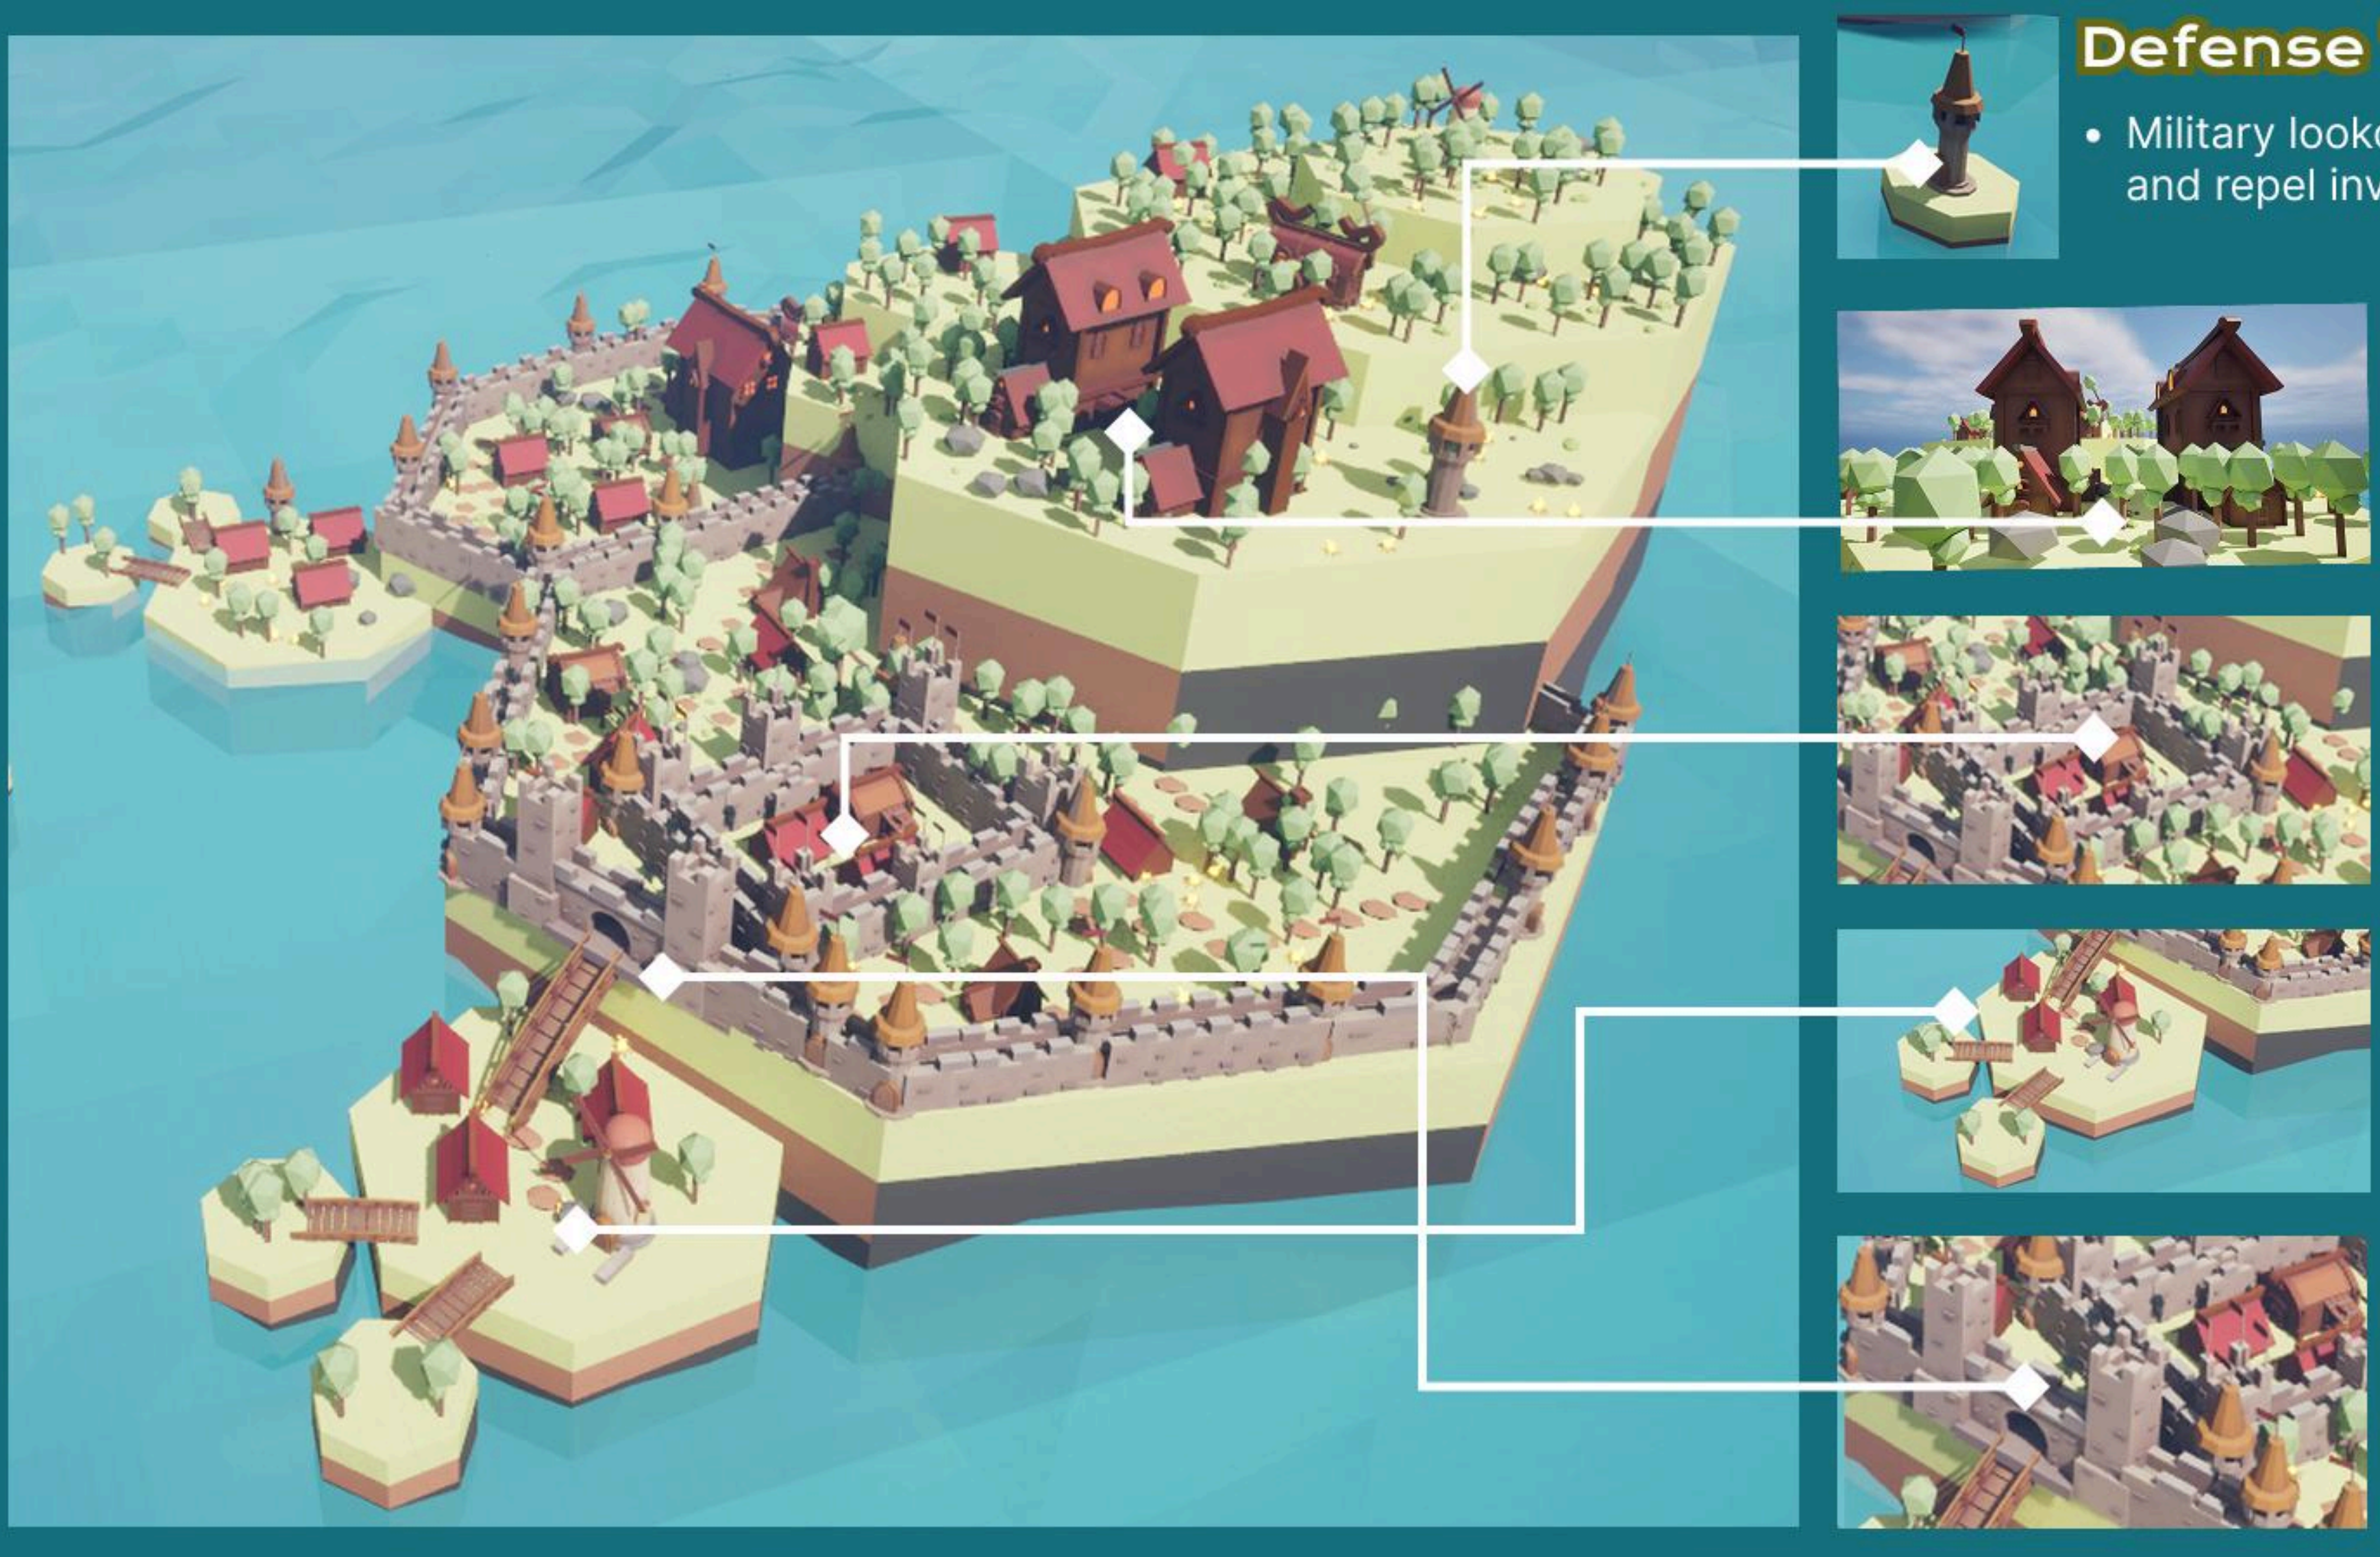
The game that serves as a reference for my work is *Totally Accurate Battle Simulator (TABS)*. I'm especially fond of its stylized art style, which features delightfully simplistic and exaggerated designs.



OVERVIEW

This stylized work is inspired by Human: Fall Flat and TABS. It features a whimsical medieval settlement with geometric buildings, bright colors, blocky structures, fresh brown/green tones, and simplistic trees — blending the fantasy of Human: Fall Flat and the stylistic vibes of TABS into a playful, game-like medieval dreamland.

Lanbian Town Details



Defense Tower

- Military lookout/defense post to monitor threats and repel invasions.

Lord's Cottage

- Lord's residence & admin center for managing the town and its resources.

Central Castle

- Core fortress for military command, defense, and symbolic power.

Harbor

- Hub for maritime trade, transport, and potential military operations.

Castle Gate

- Controlled entry/exit point, serving as a first-line defense in wartime.

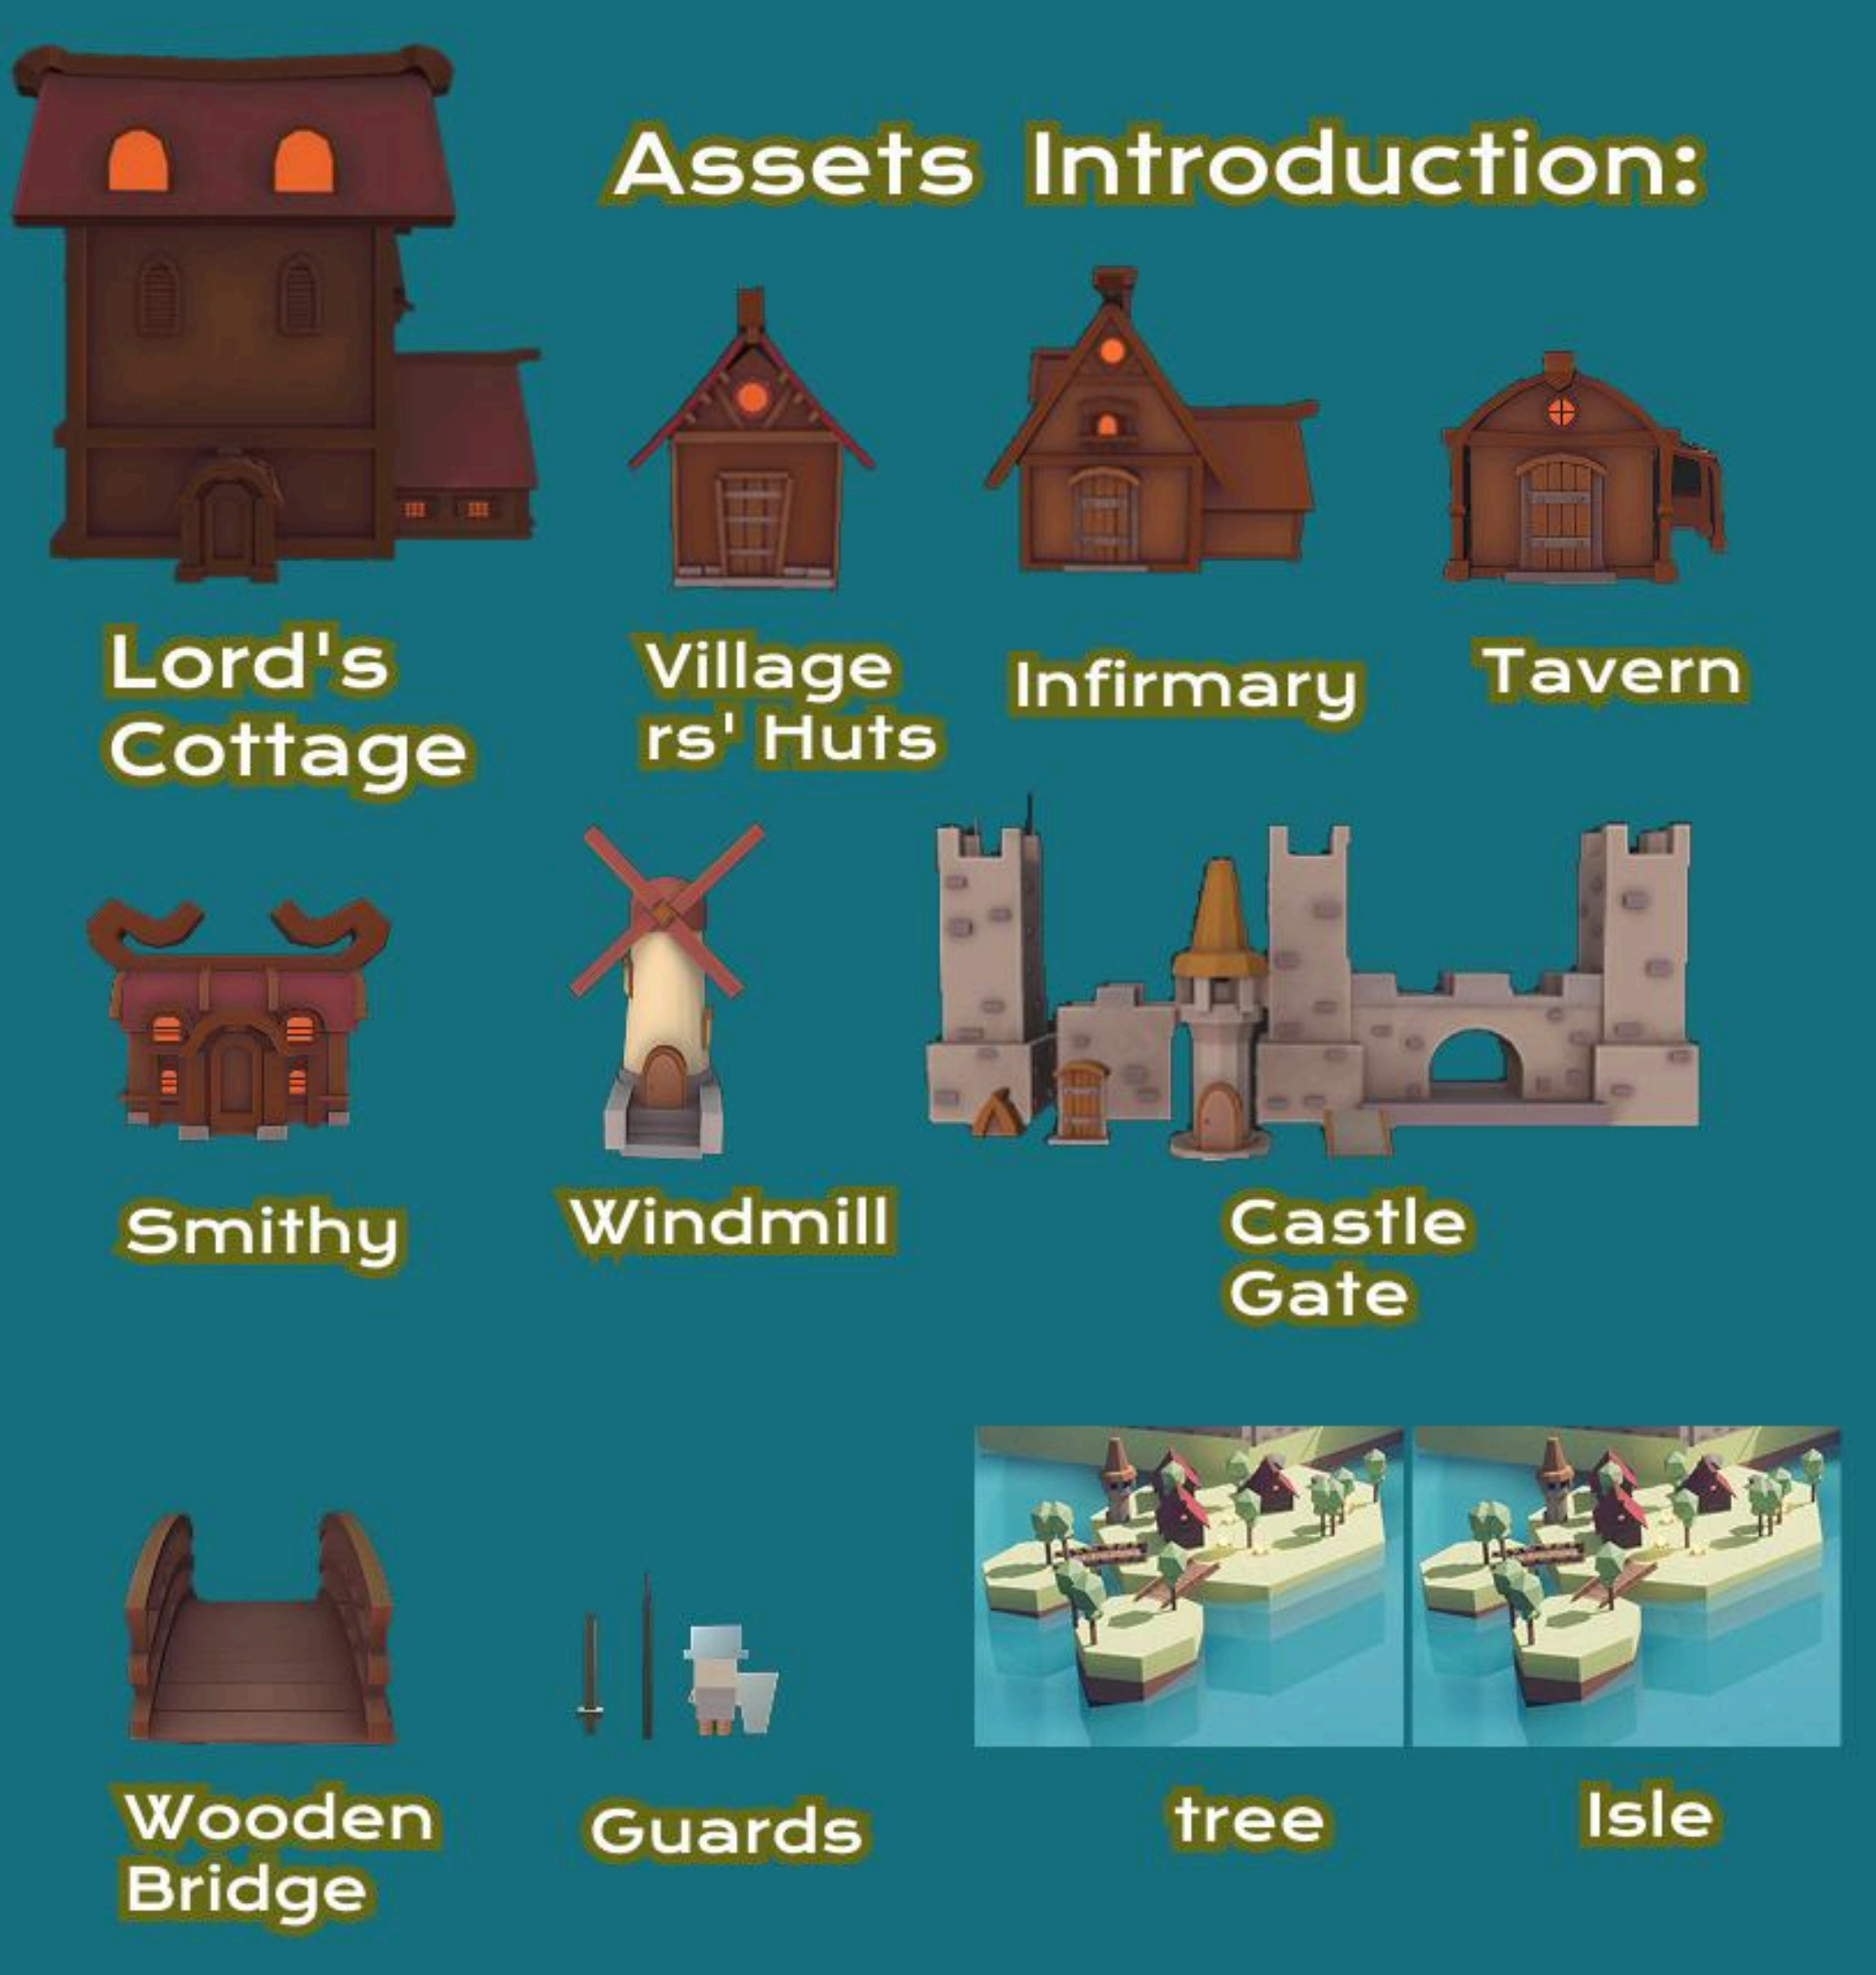
Assets Overview

First, I created all the required models in Maya, then exported them to Substance—the texturing software—to apply colors. After that, I brought them into the Unity engine to build the scene. I used material balls too: first connecting the color maps, then using the vegetation tool to place trees, tile stones, and set up torches. Finally, I imported the house models and assembled them together.

Assets Introduction:



Lord's Cottage
Villagers' Huts
Infirmary
Tavern
Smithy
Windmill
Castle Gate
Wooden Bridge
Guards
tree
Isle
