### History & Market Data of Flying Chess

**Historical Origins**

Flying chess evolved from ancient Indian "Pachisi", was refined in Britain as "Ludo", and later localized in China with wartime themes.

**Global Sales**

Classic flying chess sells over 2 million sets annually (60% in China), with a 17% growth in Western retro board game markets (2023 ICv2 report).

**Game Type**

Light strategy board game featuring dice-driven movement and path competition, averaging 20-40 minutes per session for 2-4 players.

### 16MBTI Theory & Popularity

**Development**

Created by Katherine Briggs and Isabel Myers in the 1940s based on Jungian theory, used as social media with 91 billion TikTok views in 2021.

**Test Scale**

Over 2 million annual official tests globally, adopted by 89% of Fortune 500 for team building.

**Cross-domain Application**

Used in political fanworks (anime characters' suitings, social platforms (Tinder matching), and education, though academic validity debates persist.

### Integration Advantages & Potential

| Audience Expansions | |
|---|---|
| **Traditional Users** | **New Target Groups** |
| Family players (35-50) | Gen-Z psychology enthusiasts (18-30) |
| Traditional Users | New Target Groups |
| Home gatherings | Board game cafes/corporate team-building |

**Mechanical Synergy**

Flying chess's randomness (dice) and MBTI's behavioral patterns (personality tier list) create balance, e.g., NT rule-makers vs SP risk-takers. The crossover between personality psychology and classic board games remains untapped, targeting youth-oriented psychological social games.

**Audience Expansion**

89% utilized personality skills for replayability; 76% used fun/icon avatars as social icebreakers; 70% met original DAU success in gift design.

**Dual-IP Advantage**

Leveraging MBTI's ability to refresh flying chess, similar project "Monopoly Crisis" earned $1.2M via education, though academic validity debates persist.

# Game Introduction

This game uses the MBTI 16 personality types as its core, transforming psychological traits into visual strategies. The four color groups not only represent personality quadrants but also construct a unique game ecosystem.

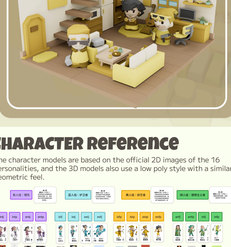
## Keepers

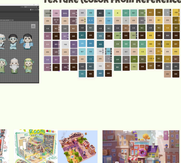
## Idealists

## Artisans



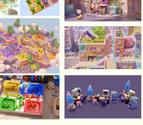
# Character Reference

The character models are based on the official 2D images of the 16 Personalities, and the 3D models also use a low poly style with a similar 2D geometric feel.



**Characters (Made in Maya)**

**Texture (Color From Reference)**



# Envrionment Reference

The House of Personality has also been furnished with the furniture that will be used based on relevant research and references; the chessboard has also retained a 3D scene layout.
