Game Design Portfolio

Dear audience,

My name is Han Yanglin. I am a gaming enthusiast and also work as a game blogger while studying in high school. Driven by this passion, I embarked on learning game art, and I am delighted to present my portfolio here. My portfolio includes three complete projects and one 2D & 3D practice work:

Project 1: A concept design project covering characters, weapons, and worldviews, with an overall post-apocalyptic technology and wasteland style.

Project 2: A 3D modeling project featuring four exquisitely designed weapons. I transformed my previously completed concept designs into 3D models.

Project 3: A game demo project focusing on map editing and level design. It is a third-person extraction shooter, a popular gameplay genre in recent times.

Project 4: A practice work consisting of my daily exercise works, including a harpoon with a rocket engine and a head-mounted night vision device.

Regarding the demo video, it is available via the following link:
