## Overview

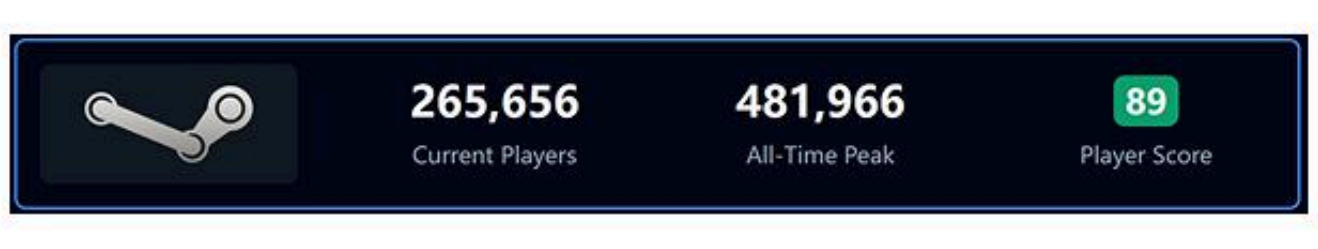
### Inspiration:

**escape from tarkov**

This game pioneered a gameplay boom centered on the core mechanics of "looting", "combat", and "extraction". Its development spanned a decade, from internal testing to the official release in October 2025. Escape from Tarkov's unique art style, environmental storytelling, and highly realistic weapon customization system have attracted a large number of hardcore gamers, exerting a profound influence on Arena Breakout and Call of Duty: DMZ mode.

However, the game's flaws are equally prominent. An outdated game engine results in poor visual performance, which is the main reason many players are deterred. Upon its official launch on Steam, its positive review rate fell below 50%, attributed to its poor operation. Nevertheless, there is no denying that it is an extremely pioneering work.

**ARC raiders**



| 265,656 | 481,966 | 89 |
|---|---|---|
| Current Players | All-Time Peak | Player Score |

There is no doubt that this game is the most successful PvPvE shooter at the end of 2025. It sold 7 million copies and generated over 200 million US dollars in sales in just its first month of release.

What attracts me most about the game is its worldview and art design: the weapons feature a wasteland tech style, while the character designs adopt a retro-futuristic aesthetic, brimming with the beauty of mechanical structures. The game still retains the core gameplay of looting, combat, and extraction—what sets it apart is its interesting and challenging AI enemies, which keep the gameplay never tedious. The use of Unreal Engine 5 and its flawless optimization have earned unanimous praise from players.

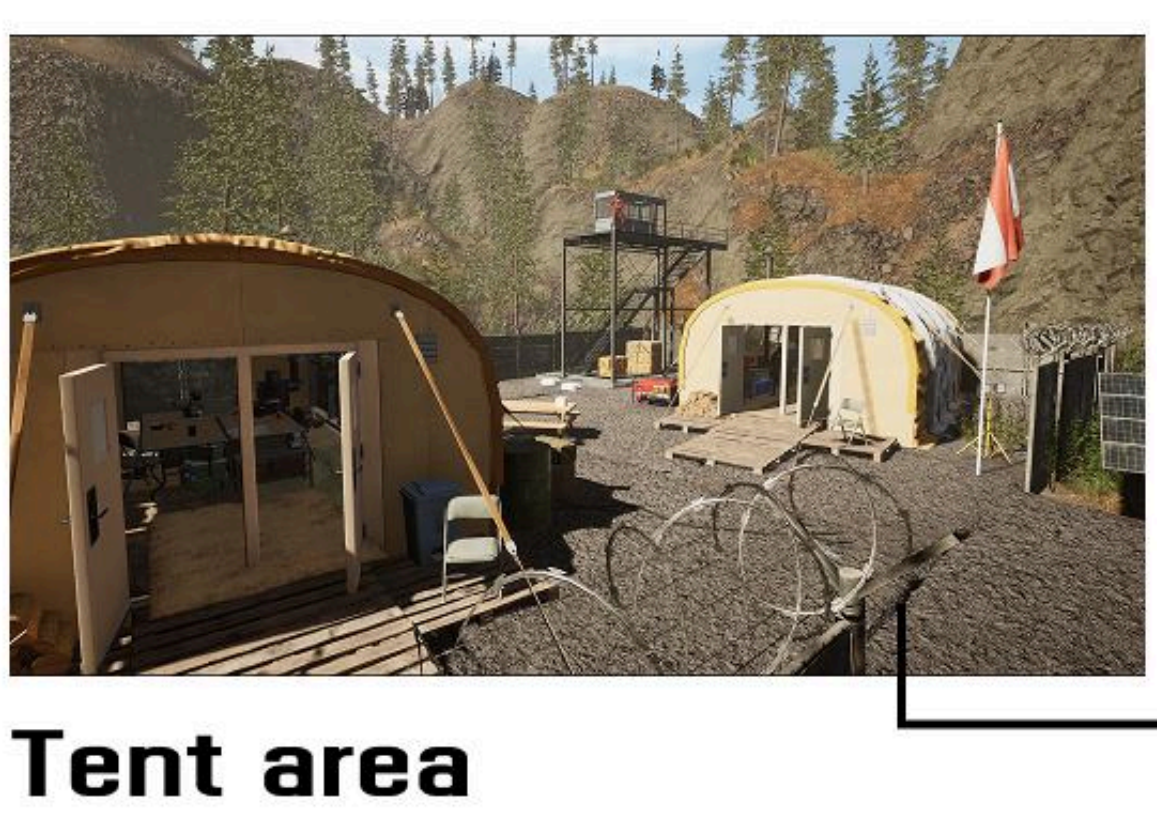
### MY PROJECT

Infiltration Mission
PLAY
SETTINGS
MENU
*You parachute near the mission location, collect two samples, cross the bridge, and locate the helicopter extraction point.

This project is developed with Unreal Engine 5. Through appropriate lighting, glowing outlines of quest items, and glowing indicators for elite enemies, it prioritizes visual comfort and avoids the disorientation issue common in games like Escape from Tarkov.

The gameplay loop—collecting quest items, fulfilling conditions to interact with and open doors, defeating the boss, and completing the victory settlement at the extraction point—achieves a Tarkov-like game flow.

## 2D Map Overview:

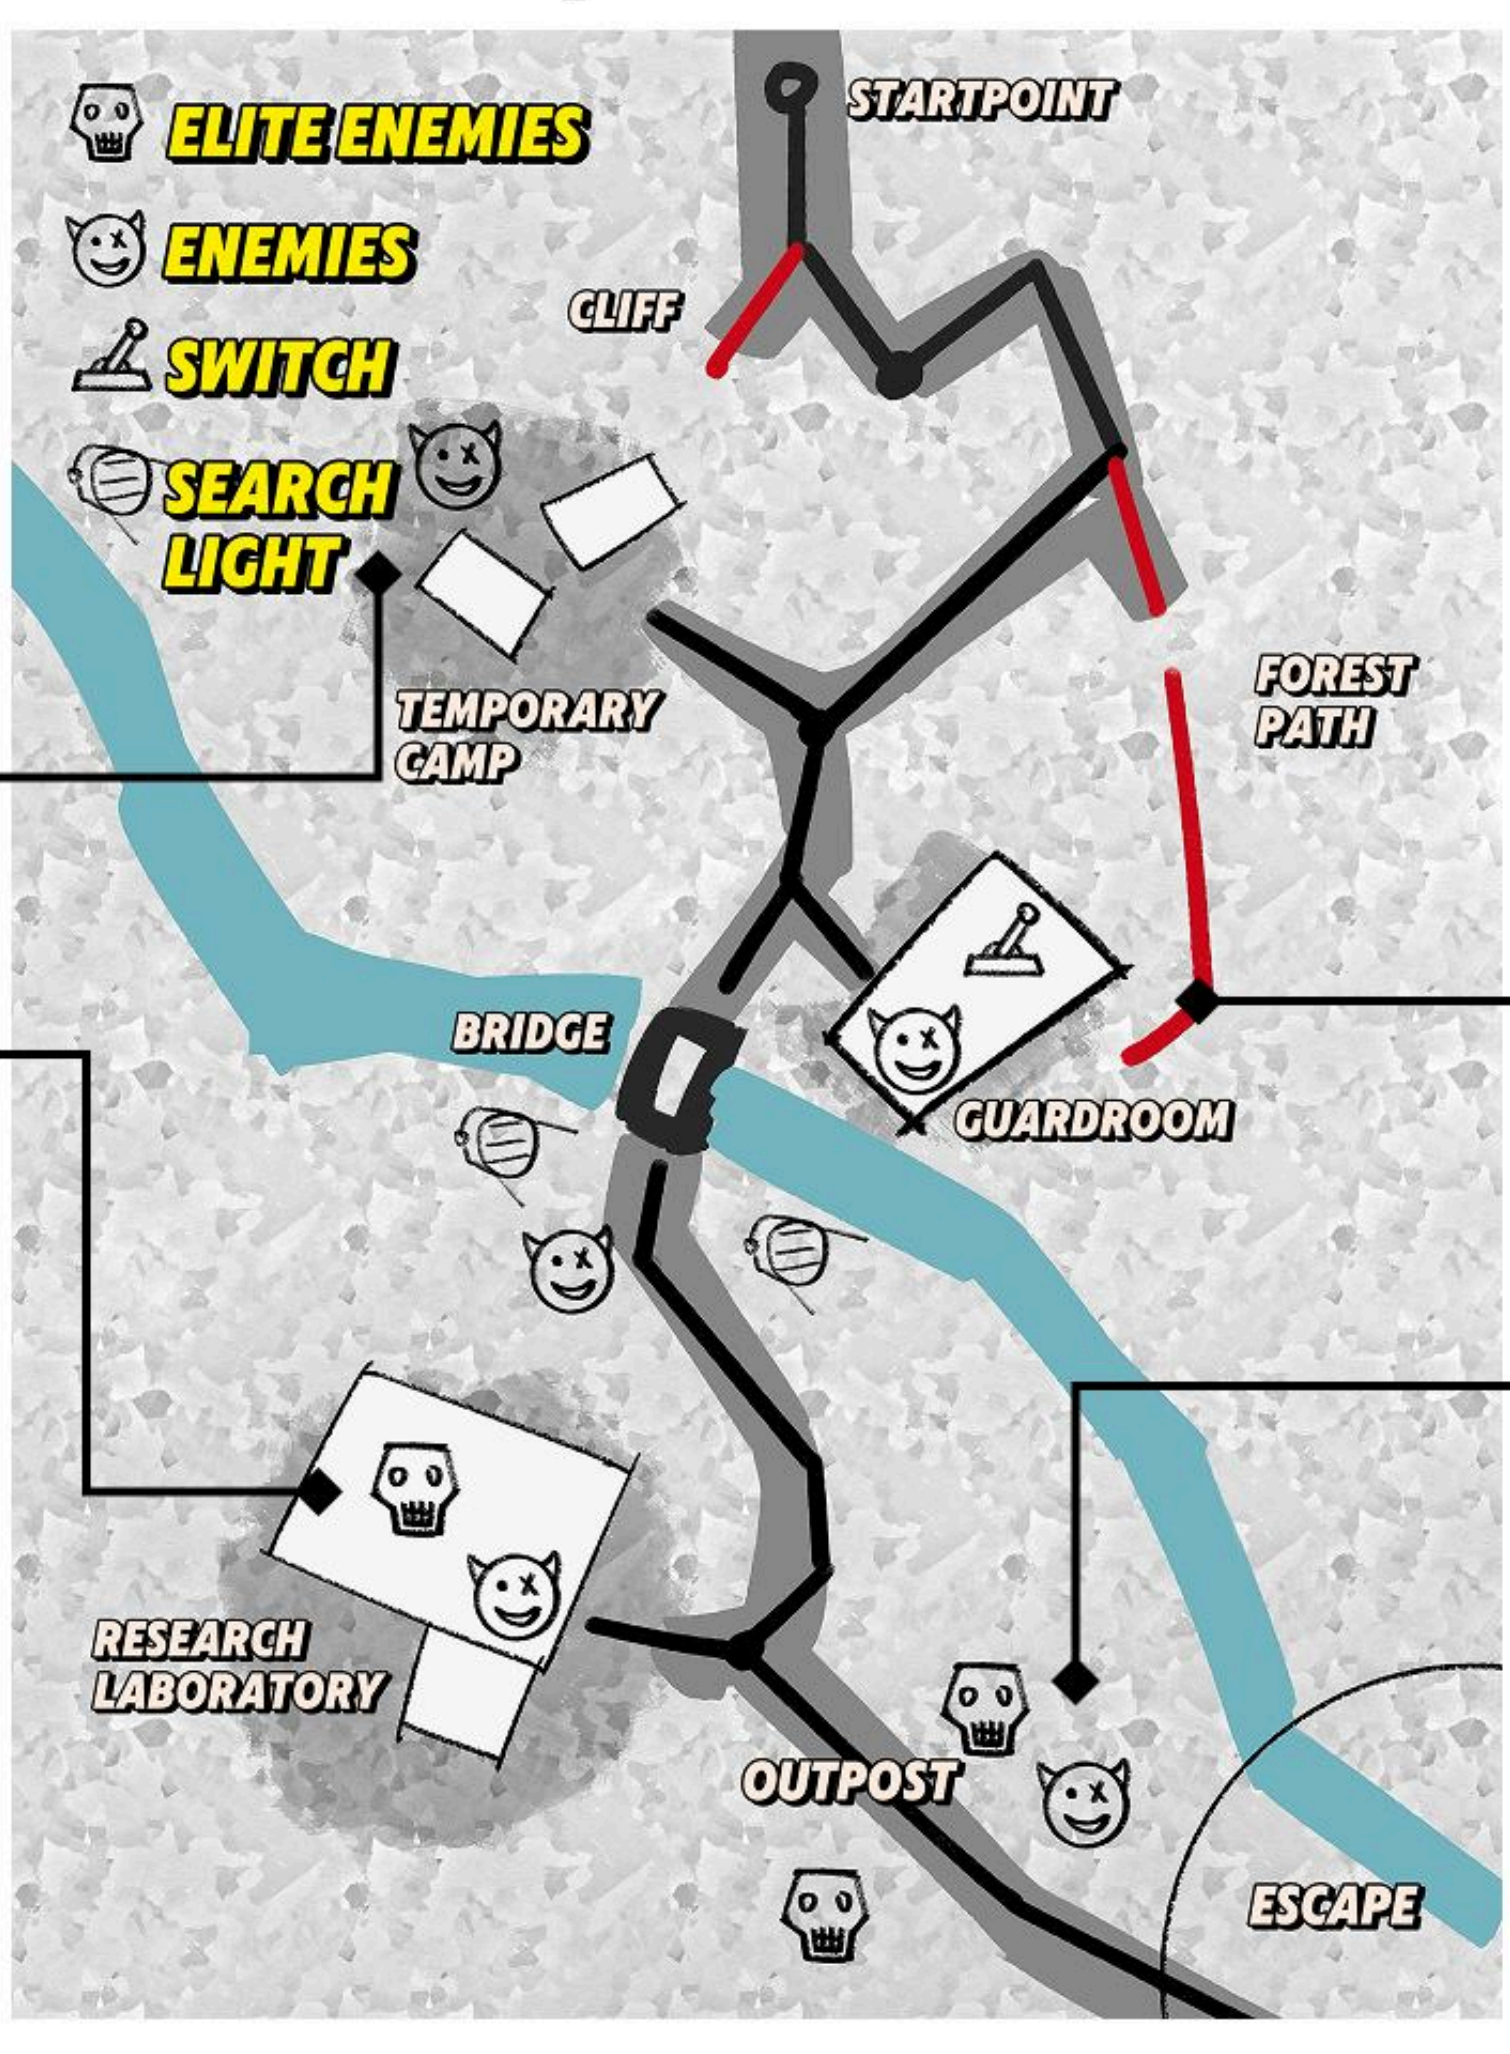


**Tent area**

Find the first quest item and encounter basic enemies.

**Factory area**

Defeat the boss to get the key.



ELITE ENEMIES

SEARCH LIGHT
STARTPOINT
CLIFF
TEMPORARY CAMP
FOREST PATH
BRIDGE
GUARDROOM
RESEARCH LABORATORY
OUTPOST
ESCAPE

**Gate and bridge**

Obtain the second quest item, open the gate, and cross the bridge.

**Escape point**

Use the key to unlock the extraction point gate and win the game.

## Landscape iteration:

### 1: Withe box stage

ESCAPE

In the first phase, based on the 2D map design, I used some geometric shapes to build the whitebox and confirmed the positional relationships of the main buildings.

In addition, the river was completed at this stage, while the rest of the terrain remains flat.

### 2: Process stage

In the second phase, I used the Landscape Mode to start constructing the scenery. The terrain elevation changes were defined from the player's spawn point to the extraction point, and most of the white cubes were also replaced.

I mainly utilized the sculpting and smoothing functions. Particularly for the game's initial area, which is a stretch of mountain road, the terrain processing is of great significance.

### 3: Final stage

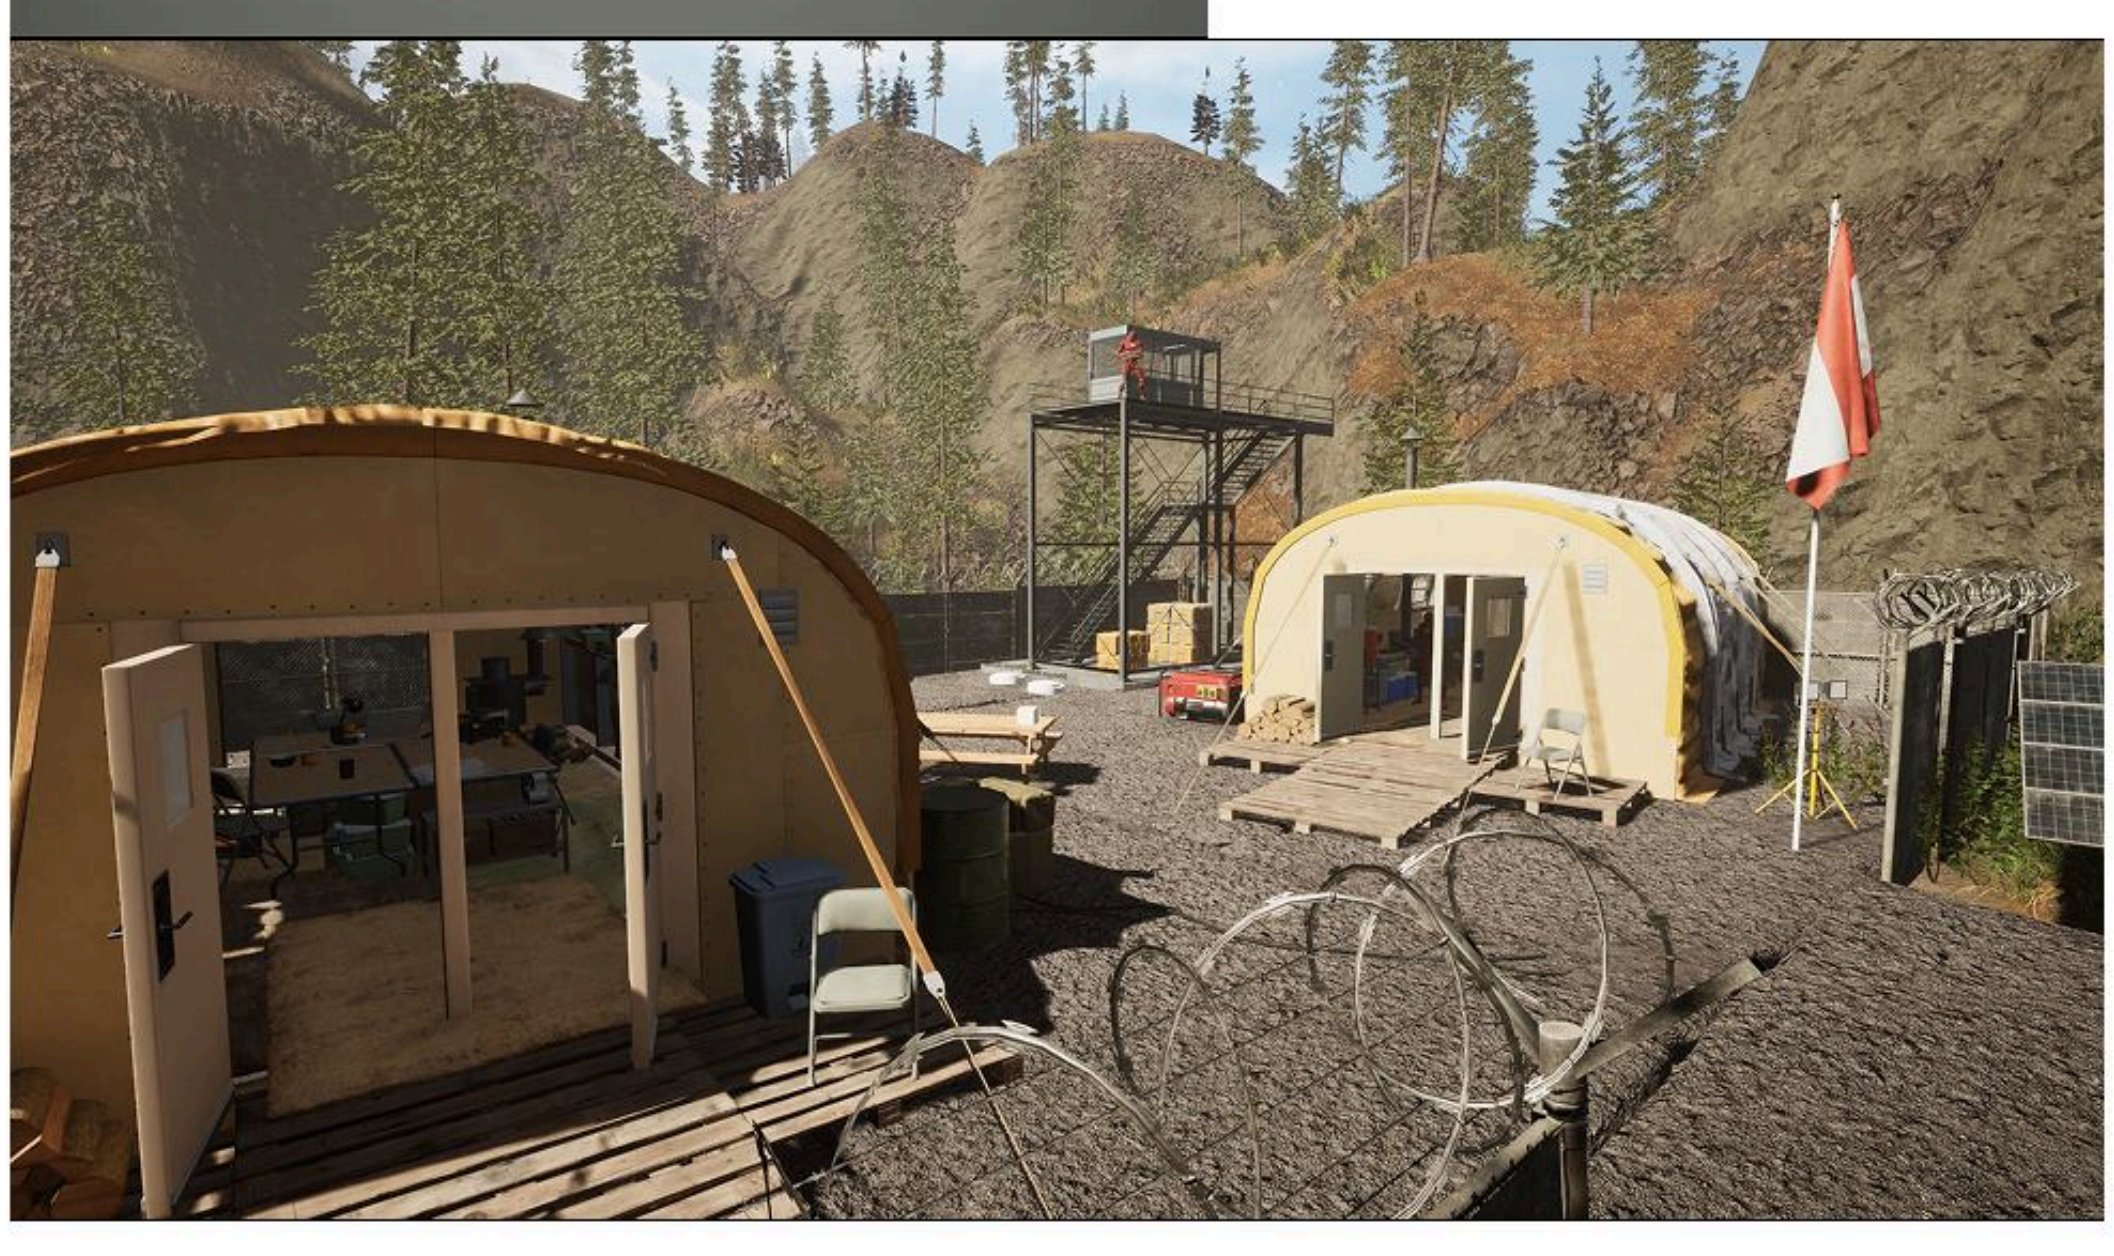
In the third phase, I have replaced all temporary models and used brushes to paint the terrain, including depressions, grasslands, sandy areas, rocks, and more.

I added debris such as cartons and cables to the map scene to enhance its narrative feel. Trees and weeds were planted at an appropriate density to guide players through the game process.

## Map detail

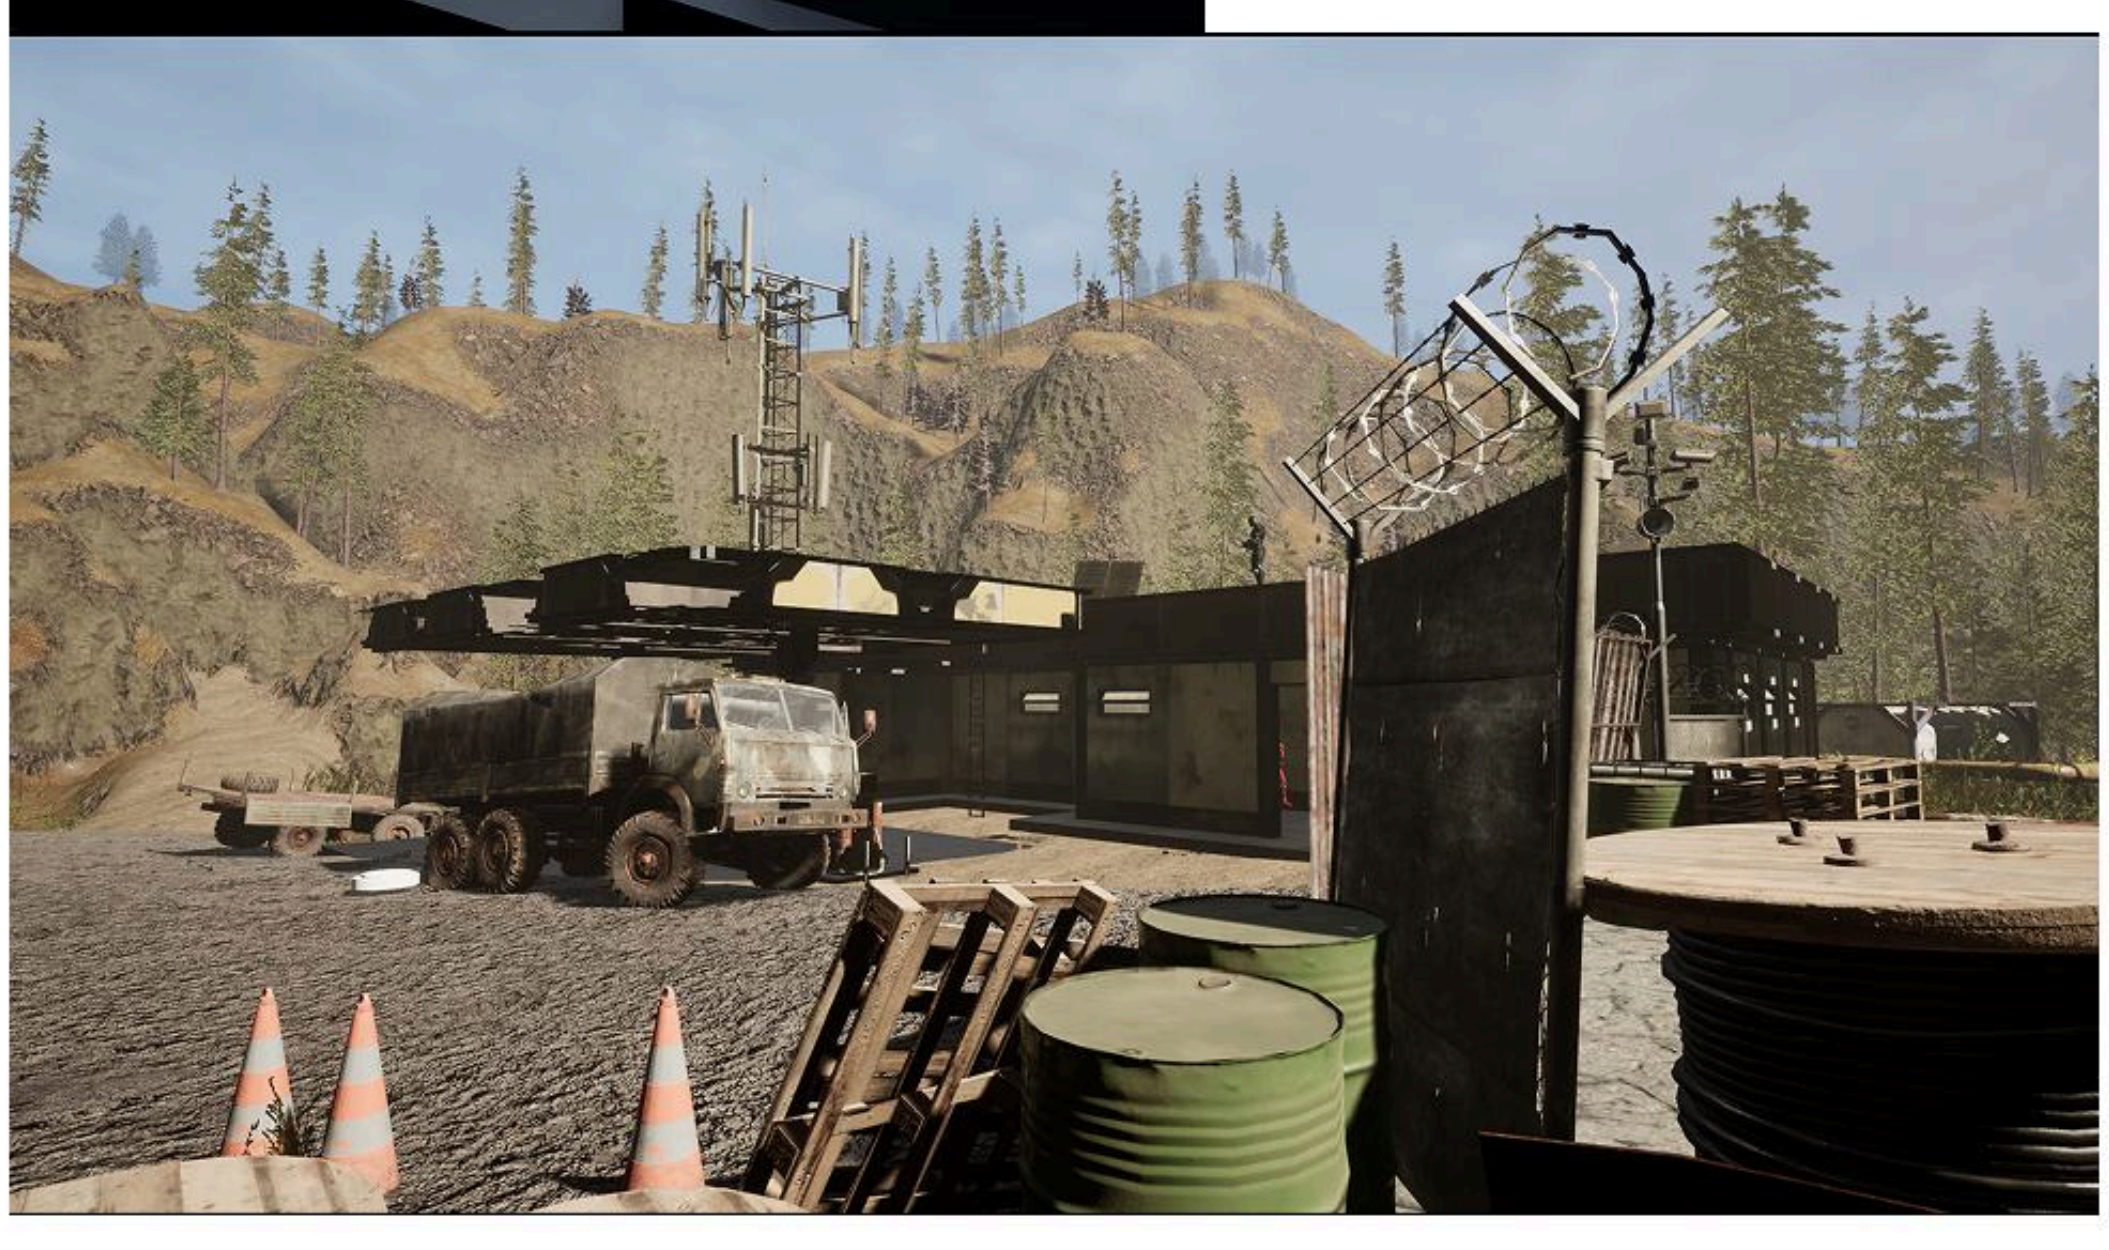
### Tent area

As the first area players encounter, the tent area contains only a small number of AI enemies. Players can collect the first mission sample here and obtain ammunition at the same time.



### Gas station

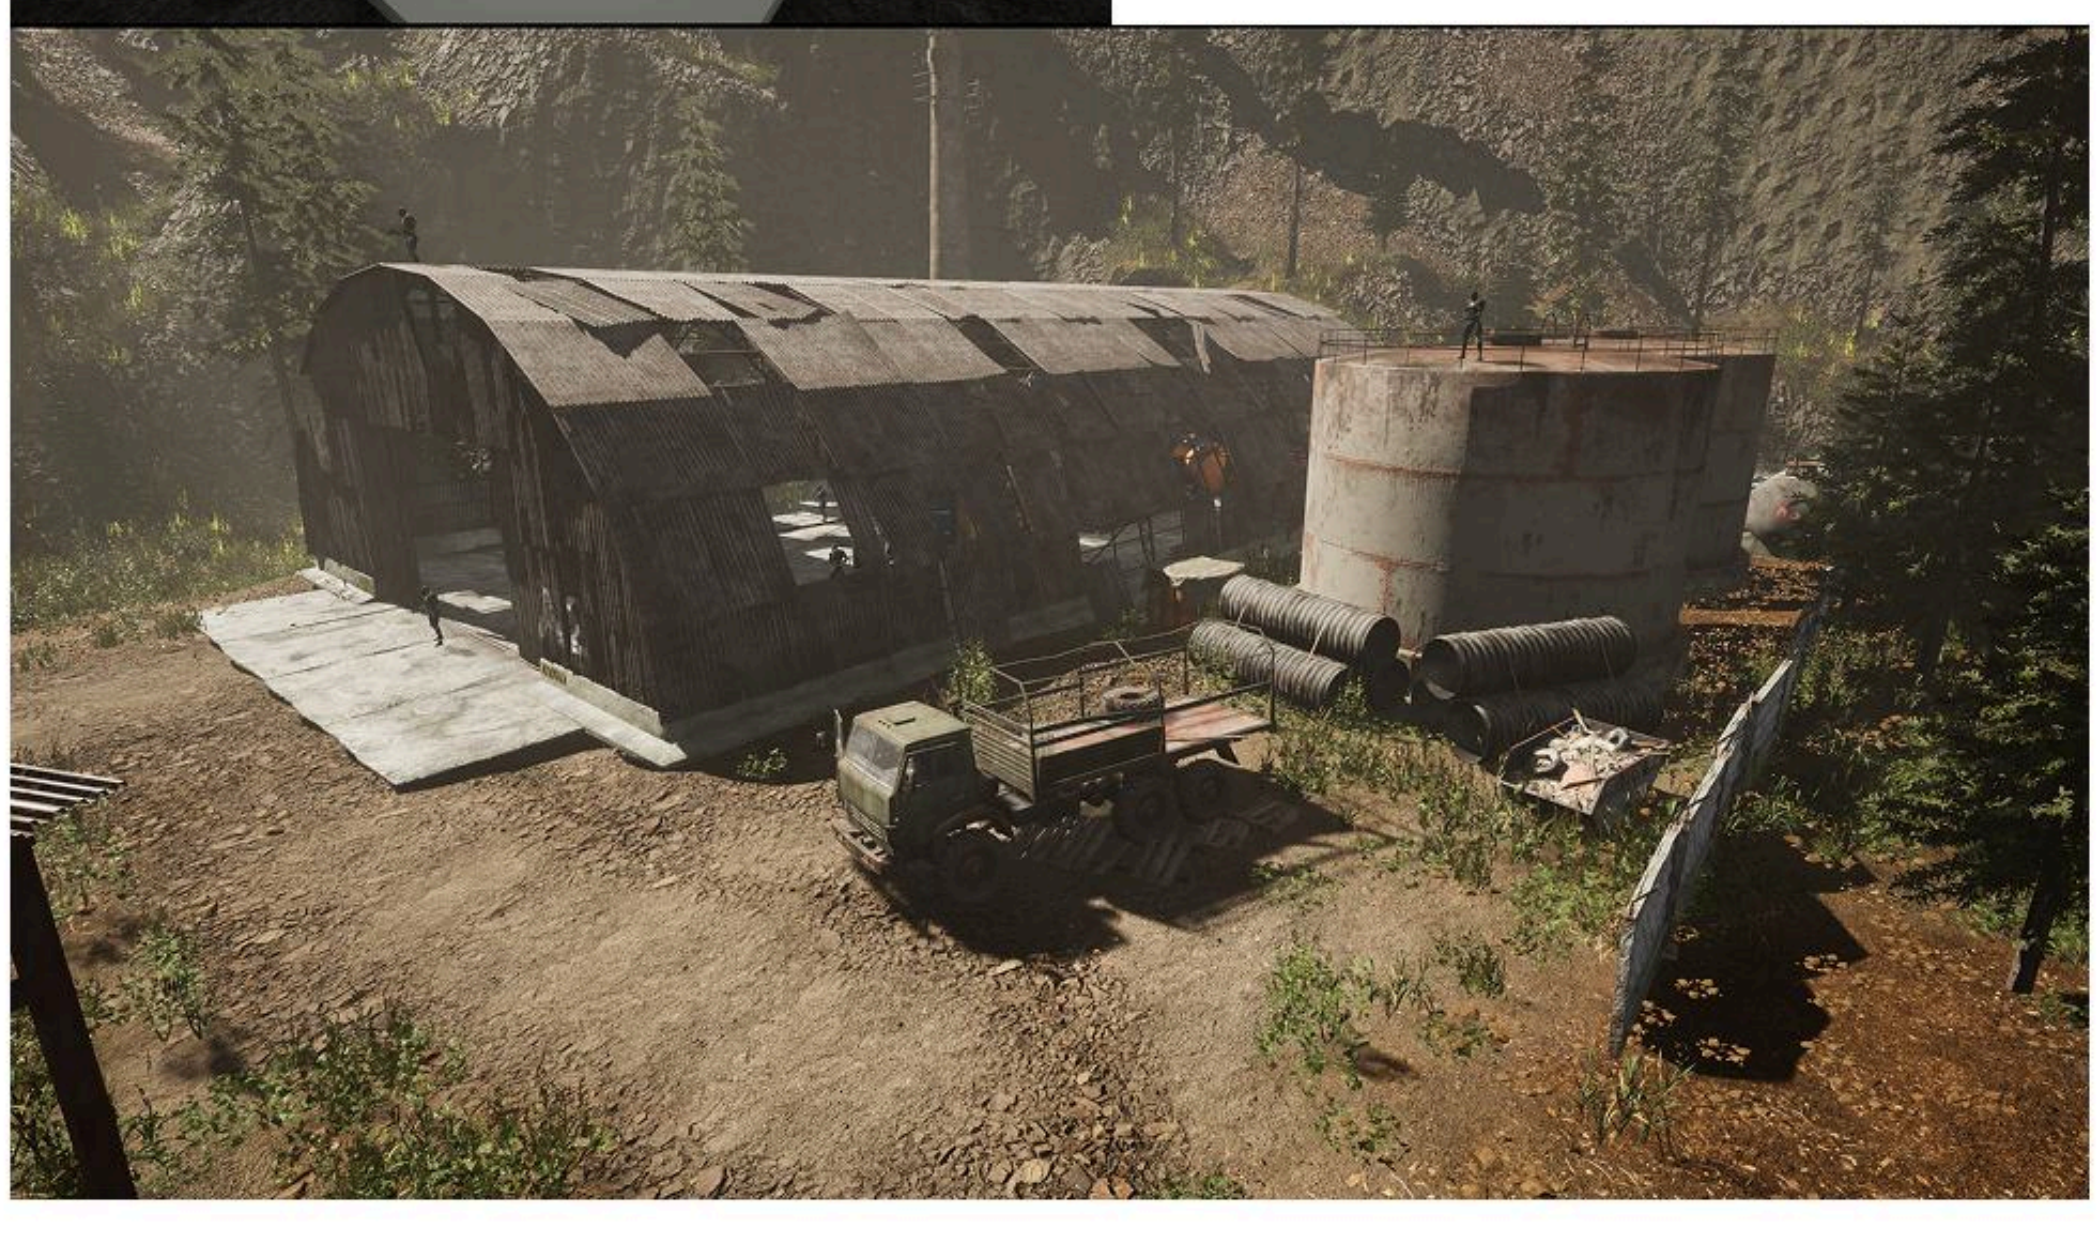
At the gas station, players need to enter the interior and take down some relatively challenging melee AI. If players wander around behind the gas station, they will discover a secret area and get a rifle in advance.



## Map detail

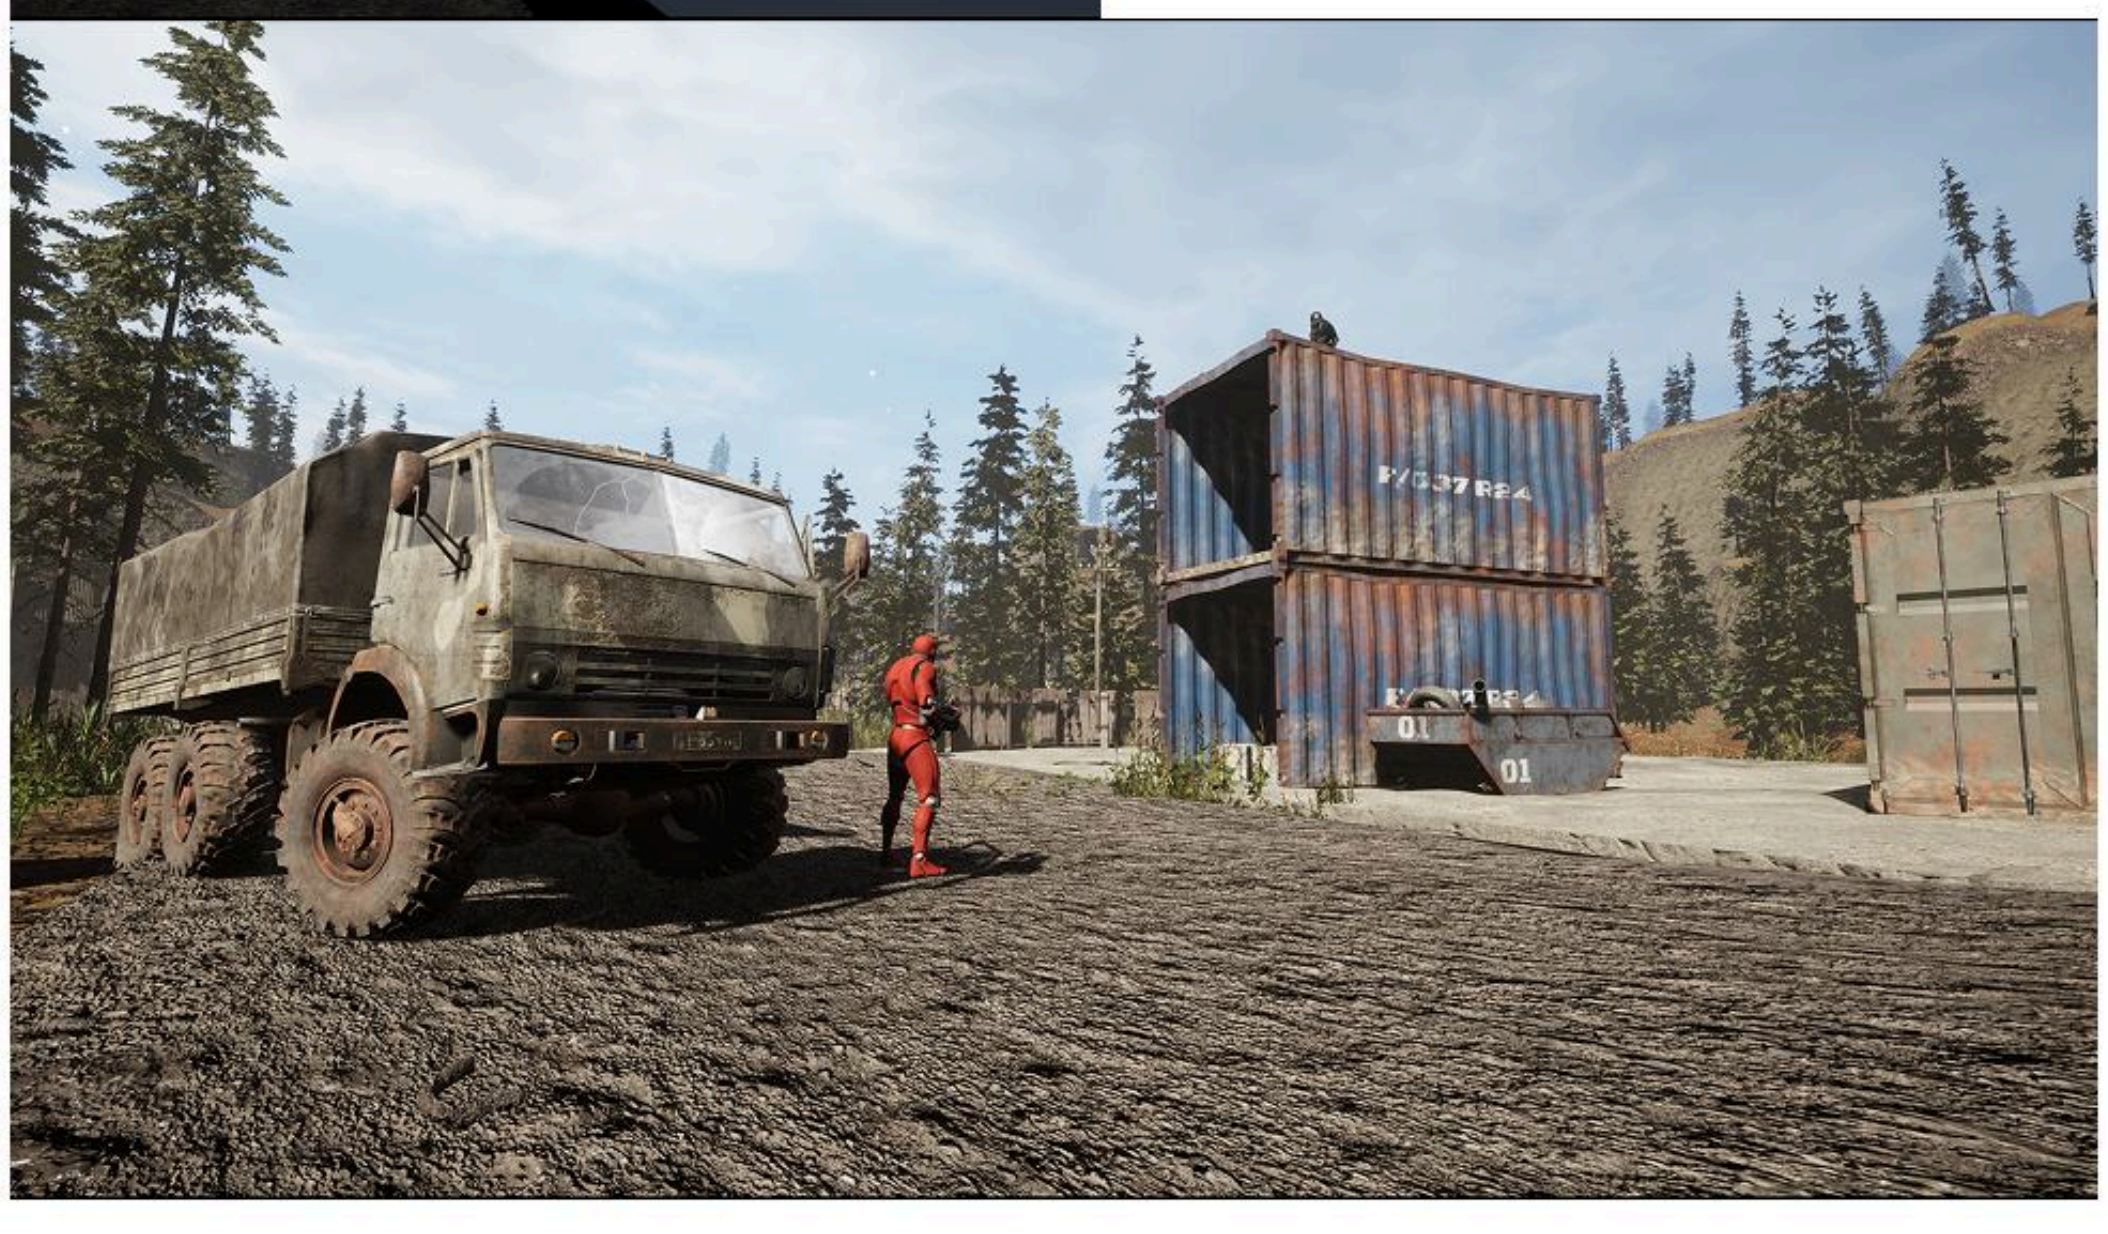
### Factory area

This is the core area of the map, an abandoned factory. Inside the factory are containers and a large number of enemies, including a boss. On the rooftops outside the factory perimeter, there are a small number of snipers.



### Construction field

This is a small area near the map's escape point.Containers and some pipes are piled up at the abandoned construction site, and the enemies are not very difficult. After passing through here, players can meet the game's victory conditions.



## Blueprint works

This section shows the blueprint that I made and the main framework that i used from Epic store.

TPS Multiplayer Pack
Hero's Journey

### Main Framework

The main character, weapon, and AI enemies systems comes from the package .In addition to the framework, I also created some blueprints myself.

what

I
